Preface	VII
List of Figures	XIII
List of Tables	XIX
Acronyms	XXI
Glossary	XXV
Abstract	XXXIII
Kurzfassung	XXXV
1 Introduction	1
2 Fundamentals	3
2.1 Physiochemical Fundamentals	3
2.1.1 Continuity Equations	3
2.1.2 Species Transport	6
2.1.3 Heat Transfer	6
2.1.4 Other Intrinsic Mixture Information	10
2.2 Fundamentals of Reaction Kinetics	12
2.2.1 Reaction Mechanisms	13
2.2.2 Elementary Reactions	16
2.2.3 Combustion Intermediates and Radicals	18
2.2.4 Chemical Equilibrium	19
2.2.5 Laminar Flames	20
2.2.6 Turbulent Flames	25
2.2.7 Ignition Delay Measurements	30
2.2.8 Flammability Limits	31
2.3 Fundamentals of Engine Combustion Modeling	32
2.3.1 Entrainment Model	35

2.3.2	Knock Models	38
2.3.3	Laminar Burning Velocity Correlations	41
2.3.4	Laminar Flame Thickness Correlation	44
2.3.5	Ignition Delay Correlation	45
3	Reaction Kinetics Calculations	51
3.1	Reaction Kinetic Mechanisms	51
3.1.1	Gas Composition Calculation	55
3.1.2	Limited Residency Times	56
3.2	Laminar Flame Calculations	58
3.2.1	Laminar Burning Velocity Calculation	59
3.2.2	Laminar Flame Thickness Calculation	61
3.2.3	Lewis Number Calculation	62
3.3	Ignition Delay Time Calculation	62
3.4	Multithreading Capabilities	63
3.4.1	Multithreading Cantera Applications	64
3.4.2	Implementation of Timeout Functionality	65
4	Automation of A New Fuel Implementation	71
4.1	Schematic Overview	71
4.2	Fuel Properties	72
4.2.1	Reaction Kinetics Dependent Properties	72
4.2.2	Specific Heat Capacities	72
4.2.3	Liquid Densities	73
4.2.4	Dynamic Viscosities	73
4.2.5	Thermal Conductivities	74
4.2.6	Critical Points	75
4.3	Laminar Flame Speed Correlation Fit	78
4.4	Laminar Flame Thickness Correlation Fit	81
4.5	Universal Auto-Ignition Correlation	83
4.6	Auto-Ignition Correlation Fit	87
4.6.1	High Temperature Ignition Delay Correlation Fit	87
4.6.2	Low Temperature Ignition Delay Correlation Fit	89
4.6.3	Temperature Increase Correlation Fit	90
4.7	Implementation into 0D Calculation	93
5	Engine Properties and Fuel Compositions	95
5.1	Engine and Test Bench Properties	95

5.2	Surrogate and Mixture Definitions	98
6	Methodology Validation	105
6.1	TPA Model Creation	106
6.2	Evaluation of Knocking Operation Points	106
6.3	Fuel effects on Flame Wrinkling and the Early Flame Kernel	108
6.4	Cyclopentanone and Anisole	111
6.4.1	Burn Rate Prediction	112
6.4.2	Knock Occurrence Prediction	119
6.5	Methanol	124
6.6	Dimethyl Carbonate/Methyl Formate Mixture	124
6.7	Hydrogen	125
6.8	Limitations of the Presented Methodology	128
7	Conclusion and Outlook	131
	Bibliography	135
	Appendices	149
