

Contents

Introduction	1
The Origins of the Trace Formula	
Martin C. Gutzwiller	8
Quantum Fluids and Classical Determinants	
Predrag Cvitanović, Gábor Vattay, and Andreas Wirzba	29
Semiclassical Cross Sections	
Bruno Eckhardt and Bruno Hüpfer	63
Resummation and the Turning Points of Zeta Functions	
Jonathan P. Keating	83
Tunneling and the Semiclassical Propagator: A New Perspective	
Neepa T. Maitra and Eric J. Heller	94
Semiclassical Floquet Spectra Without Periodic Orbits from $\hbar$-Expansion of Floquet Matrix	
Peter Gerwinski and Fritz Haake	112
Spectral Statistics of Chaotic and Disordered Systems	
Oded Agam and Shmuel Fishman	122
Microwave Ionization of Hydrogen Rydberg Atoms: Chaos, Symmetry and Dynamical Localization	
Reinhold Blümel	154
The Periodically Driven Excited Hydrogen Atom	
Derek Richards	173

Ionization of Hydrogen Atoms by Circularly Polarized Microwaves	
Dominique Delande and Jakub Zakrzewski	205
Classical Orbits and Quantum Waves in Natural Atoms and in Designer Atoms	
John B. Delos and Charles D. Schwieters	233
Semiclassical Approaches to Atoms in External Fields	
Jörg Main	248
Two-Electron Atoms: From Resonances to Fragmentation	
Jan-Michael Rost and Gregor Tanner	274
Periodic Orbit Spectra of Simple Atoms	
Joachim Burgdörfer, Yanghui Qiu, and Jörg Müller	304
Subject Index	339
