List of Symbols xi

1 Introduction and definitions	1
1.1 Modes of heat transfer	3
1.2 Definitions	4
1.2.1 Heat (transfer) rate and heat flux	4
1.2.2 Heat transfer coefficients and overall heat transfer coefficients	4
1.2.3 Rate equations	6
1.2.4 Energy balance equations	6
1.2.5 Log mean temperature difference	7
1.2.6 Thermal conductivity	9
1.3 Methodology of solving problems	9
 2 Thermal conduction in static materials	 17
2.1 Steady-state thermal conduction	17
2.1.1 Thermal conduction in a plane wall	18
2.1.2 Heat transfer through multiple plane walls	22
2.1.3 Thermal conduction in a hollow cylinder	25
2.1.4 Hollow cylinder with multiple layers	29
2.1.5 Thermal conduction in a hollow sphere	32
2.1.6 Thermal conduction with heat flux to extended surfaces	35
2.1.6.1 Temperature distribution in the fin	36
2.1.6.2 Temperature at the fin tip	38
2.1.6.3 Heat rate at the fin foot	38
2.1.6.4 Fin efficiency	39
2.1.6.5 Applicability for other geometries	40
2.2 Transient thermal conduction	44
2.2.1 One-dimensional transient thermal conduction	44
2.2.1.1 Determination of the temporal change of temperature	44
2.2.1.2 Determination of transferred heat	47
2.2.1.3 Special solutions for short periods of time	58
2.2.2 Coupled systems	60
2.2.3 Special cases at $Bi = 0$ and $Bi = \infty$	62

2.2.4	Temperature changes at small Biot numbers	62
2.2.4.1	A small body immersed in a fluid with large mass	63
2.2.4.2	A body is immersed into a fluid of similar mass	65
2.2.4.3	Heat transfer to a static fluid by a flowing heat carrier	68
2.2.5	Numerical solution of transient thermal conduction equations	70
2.2.5.1	Discretization	70
2.2.5.2	Numerical solution	73
2.2.5.3	Selection of the grid spacing and of the time interval	74
3	Forced convection	77
3.1	Dimensionless parameters	78
3.1.1	Continuity equation	79
3.1.2	Equation of motion	80
3.1.3	Equation of energy	81
3.2	Determination of heat transfer coefficients	83
3.2.1	Flow in a circular tube	83
3.2.1.1	Turbulent flow in circular tubes	83
3.2.1.2	Laminar flow in circular tubes at constant wall temperature	85
3.2.1.3	Equations for the transition from laminar to turbulent	86
3.2.1.3	Flow in tubes and channels of non-circular cross-sections	94
3.2.2	Flat plate in parallel flow	98
3.2.3	Single bodies in perpendicular cross-flow	99
3.2.4	Perpendicular cross-flow in tube bundles	103
3.2.5	Tube bundle with baffle plates	109
3.3	Finned tubes	110
3.3.1	Annular fins	112
4	Free convection	119
4.1	Free convection at plain vertical walls	120
4.1.1	Inclined plane surfaces	126
4.2	Horizontal plane surfaces	128
4.3	Free convection on contoured surface areas	128
4.3.1	Horizontal cylinder	129
4.3.2	Sphere	130
4.4	Interaction of free and forced convection	130
5	Condensation of pure vapors	131
5.1	Film condensation of pure, static vapor	131
5.1.1	Laminar film condensation	131
5.1.1.1	Condensation of saturated vapor on a vertical wall	131
5.1.1.2	Influence of the changing wall temperature	135
5.1.1.3	Condensation of wet and superheated vapor	136
5.1.1.4	Condensation on inclined walls	137
5.1.1.5	Condensation on horizontal tubes	137

5.1.2 Turbulent film condensation on vertical surfaces	137
5.2 Dimensionless similarity numbers	137
5.2.1 Local heat transfer coefficients	138
5.2.2 Mean heat transfer coefficients	139
5.2.3 Condensation on horizontal tubes	139
5.2.4 Procedure for the determination of heat transfer coefficients	140
5.2.5 Pressure drop in tube bundles	147
5.3 Condensation of pure vapor in tube flow	151
5.3.1 Condensation in vertical tubes	152
5.3.1.1 Parallel-flow (vapor flow downward)	153
5.3.1.2 Counterflow (vapor flow upward)	154
5.3.2 Condensation in horizontal tubes	158
6 Boiling heat transfer	171
6.1 Pool boiling	171
6.1.1 Sub-cooled convection boiling	173
6.1.2 Nucleate boiling	173
6.2 Boiling at forced convection	182
6.2.1 Sub-cooled boiling	182
6.2.2 Convection boiling	183
7 Thermal radiation	189
7.1 Basic law of thermal radiation	190
7.2 Determination of the heat flux of radiation	191
7.2.1 Intensity and directional distribution of the radiation	192
7.2.2 Emissivities of technical surfaces	193
7.2.3 Heat transfer between two surfaces	194
7.2.3.1 Parallel gray plates with identical surface area size	196
7.2.3.2 Surrounded bodies	197
7.3 Thermal radiation of gases	206
7.3.1 Emissivities of flue gases	207
7.3.1.1 Emissivity of water vapor	207
7.3.1.2 Emissivity of carbon dioxide	208
7.3.2 Heat transfer between gas and wall	208
8 Heat exchangers	215
8.1 Definitions and basic equations	215
8.2 Calculation concepts	218
8.2.1 Cell method	218
8.2.2 Analysis with the log mean temperature method	223
8.3 Fouling resistance	236
8.4 Tube vibrations	240
8.4.1 Critical tube oscillations	240
8.4.2 Acoustic resonance	242

Appendix	245
A1: Important physical constants	245
A2: Thermal properties of sub-cooled water at 1 bar pressure	246
A3: Thermal properties of saturated water and steam	248
A4: Thermal properties of water and steam	250
A5: Thermal properties of saturated Freon 134a	252
A6: Thermal properties of air at 1 bar pressure	254
A7: Thermal properties of solid matter	255
A8: Thermal properties of thermal oils	256
A9: Thermal properties of fuels at 1.013 bar	257
A10: Emissivity of surfaces	258
A11: Formulary	261
 Bibliography	 271
 Index	 275
