Preface — V

1 Overview and introduction to the chemical industry — 1

1.1 Focus and depth — 1

1.2 Recycling — 2

2 Phosgene (carbonyl dichloride) — 5

2.1 Method of production — 5

2.2 Volume of production annually — 6

2.3 Sales — 6

2.4 Uses — 6

2.5 Recycling — 8

3 Butyraldehyde — 9

3.1 Method of production — 9

3.2 Volume of production annually — 9

3.3 Uses — 9

3.3.1 *n*-Butanol, production and uses — 9

3.3.2 Uses of 2-ethylhexanol — 10

3.3.3 Uses of polyvinyl butyral — 11

3.3.4 Uses of trimethylolpropane — 12

3.4 Recycling — 12

4 Acetic anhydride — 15

4.1 Method of production — 15

4.2 Production — 15

4.3 Uses — 16

4.4 Recycling and reuse — 18

5 Linear alpha olefins (LAO) — 19

5.1 Methods of production — 19

5.2 Uses of the different LAOs — 20

5.3 Recycling and reuse — 21

6 *n*-Butanol (1-butanol or *n*-butyl alcohol) — 23

6.1 Method of production — 23

6.2 Uses — 24

6.3 Recycling and reuse — 24

- 7 Methyl methacrylate — 27**
 - 7.1 Method of production — 27
 - 7.1.1 The ACH method — 27
 - 7.1.2 Production from isobutylene — 28
 - 7.1.3 Production from isobutyric acid — 28
 - 7.1.4 The methacrylonitrile process (MAN process) — 29
 - 7.1.5 Production from methyl propionate (the BASF Route) — 29
 - 7.1.6 Production from propionaldehyde — 30
 - 7.1.7 Production from propyne (aka, methyl acetylene) — 30
 - 7.2 Volume of production annually — 31
 - 7.3 Uses — 31
 - 7.4 Recycling and reuse — 32

- 8 Hexamethylene diamine (HMDA) — 35**
 - 8.1 Method of production — 35
 - 8.2 Volume of production and uses — 36
 - 8.3 Recycling and reuse — 37

- 9 Hydrogen cyanide (HCN) — 39**
 - 9.1 Method of production — 39
 - 9.2 Volume of production annually — 40
 - 9.3 Uses — 40
 - 9.3.1 Mining — 40
 - 9.3.2 Adiponitrile — 41
 - 9.3.3 Acetone cyanohydrin — 41
 - 9.3.4 Methionine — 41
 - 9.3.5 Cyanuric chloride and cyanogen chloride — 41
 - 9.3.6 Chelators — 42
 - 9.4 Recycling and reuse — 43

- 10 Bisphenol A — 45**
 - 10.1 Method of production — 45
 - 10.2 Volume of production annually — 46
 - 10.3 Uses — 46
 - 10.3.1 Polycarbonate production — 46
 - 10.3.2 Epoxy resin production — 47
 - 10.4 The controversy — 48
 - 10.5 Recycling and reuse — 48

- 11 Food additives — 51**
 - 11.1 Categorizing food additives: organic and inorganic — 51
 - 11.1.1 Food coloring — 51

- 11.1.2 Flavor enhancers — 53
- 11.1.3 Preserving freshness — 56
- 11.1.4 Enhancing mouth feel — 56
- 11.1.5 Inorganic additives — 58
- 11.2 Production — 58
- 11.3 Recycling — 59

12 Vitamins — 61

- 12.1 Sources and production — 61
- 12.1.1 Vitamin A — 61
- 12.1.2 Vitamin B₁ — 62
- 12.1.3 Vitamin B₂ — 62
- 12.1.4 Vitamin B₃ — 63
- 12.1.5 Vitamin B₅ — 64
- 12.1.6 Vitamin B₆ — 64
- 12.1.7 Vitamin B₇ — 65
- 12.1.8 Vitamin B₉ — 65
- 12.1.9 Vitamin B₁₂ — 65
- 12.1.10 Vitamin C — 67
- 12.1.11 Vitamin D — 67
- 12.1.12 Vitamin E — 68
- 12.1.13 Vitamin K — 69
- 12.1.14 Vitamin F — 70
- 12.2 Vitamin uses — 70
- 12.3 Recycling — 70

13 Hydrogen peroxide — 73

- 13.1 Production — 73
- 13.2 Uses of hydrogen peroxide — 74
- 13.3 Recycling and reuse — 75

14 Lithium — 77

- 14.1 Mining and sources — 77
- 14.2 Extraction chemistry — 78
- 14.3 Uses — 79
- 14.3.1 Ceramics and glass — 79
- 14.3.2 Lithium batteries — 79
- 14.3.3 Lubricating greases — 80
- 14.3.4 Air treatment — 81
- 14.4 Potential uses — 82
- 14.5 Recycling — 82

15 Tungsten — 85

- 15.1 Mining and sources — 85
- 15.2 Extraction chemistry — 86
- 15.3 Uses — 87
- 15.4 Recycling and reuse — 87

16 Sodium — 89

- 16.1 Sources — 89
- 16.2 Extraction chemistry — 89
- 16.3 Uses — 91
- 16.4 Other, heavy alkali metal production and uses — 91
- 16.5 Recycling — 92

17 Lead — 93

- 17.1 Sources — 93
- 17.2 Extraction chemistry — 94
- 17.3 Uses — 95
- 17.4 Recycling — 95

18 Rare earth elements — 97

- 18.1 Sources — 98
- 18.2 Extraction chemistry — 98
 - 18.2.1 Separation and isolation — 98
 - 18.2.2 Refining to pure rare earth elements — 101
- 18.3 Uses — 101
- 18.4 Recycling — 103

19 Thorium — 105

- 19.1 Sources — 105
- 19.2 Extraction chemistry — 105
- 19.3 Uses — 106
- 19.4 Potential uses for power — 107
- 19.5 Recycling — 108

20 Catalysts — 109

- 20.1 Uses — 109
- 20.2 Syntheses — 109
 - 20.2.1 Metallocenes — 109
 - 20.2.2 Zeolites — 111
- 20.3 Recycling — 111

21	Bromine — 113
21.1	Mining and sources — 113
21.2	Extraction chemistry — 114
21.3	Uses — 114
21.3.1	Flame retardants — 115
21.3.2	Halons — 115
21.3.3	Fumigants — 116
21.3.4	Drilling fluids — 118
21.3.5	Vegetable oil — 118
21.4	Reuse and recycling — 119
22	Fluorine — 121
22.1	Isolation and production — 121
22.2	Hydrogen fluoride — 122
22.3	Cryolite — 123
22.4	Teflon — 124
22.5	Fluorinated fibers — 125
22.6	Dental fluoride and fluoridated water — 125
22.7	Recycling and reuse — 126
23	Glass — 127
23.1	Raw materials — 127
23.1.1	Compositions — 127
23.1.2	Colors — 129
23.2	Production — 129
23.3	Uses — 130
23.4	Reuse and recycling — 131
24	Cement — 133
24.1	Sources — 133
24.2	Production and formulation chemistry — 133
24.2.1	Hydraulic cement chemistry — 134
24.2.2	Nonhydraulic cement chemistry — 135
24.2.3	Other types of cement — 136
24.3	Uses — 136
24.4	Recycling — 136
25	Asphalt — 139
25.1	Source material — 139
25.2	Formulations and production — 139
25.3	Uses — 140
25.4	Reuse and recycling — 140

26	Biofuels and bioplastics — 143
26.1	Corn for bioethanol — 143
26.2	Sugar cane for bioethanol — 144
26.3	Soybeans for biodiesel — 144
26.4	Algae as a fuel source — 145
26.5	Cellulosic bioethanol — 146
26.6	Production of bioplastics — 146
26.6.1	Bio-polylactic acid — 147
26.6.2	Bio-poly-starch — 148
26.7	Recycling and reuse — 148

Index — 151
