Contents

1 Introduction 1
1.1 Historical Evolution 1
1.2 Motivation 4
1.3 Structure of This Book 5
References 6

Part I Optical Network Design

2 Fiber Optical Transmission Systems 11
2.1 Generic Setup 11
2.2 Transmitters 13
2.3 Modulation Formats 15
2.4 Fiber Properties 18
2.5 Amplifiers 21
2.6 Optical Cross Connects 22
2.7 Receivers 24
2.8 Electrical Signal Processing 26
References 27

3 Simulation of Fiber Optical Transmission Systems 31
3.1 Modeling of Fiber Optical Transmission Systems 31
3.1.1 Attenuation and Dispersion 32
3.1.2 Amplified Spontaneous Emission Noise 35
3.1.3 Fiber Birefringence 38
3.1.4 Nonlinear Fiber Effects 39
3.1.5 Coupled Nonlinear Schrödinger Equation 42
3.1.6 Split-Step Fourier Method 44
3.1.7 Modeling of Polarization Mode Dispersion 46
3.1.8 Calculation of the Bit Error Ratio 48

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

3.2 The Fiber Optical Transmission Simulator PHOTOSS 50
References 52

4 Efficient Design of Fiber Optical Transmission Systems 55
4.1 Meta-Heuristic Based Optimization 56
4.1.1 Overview of Employed Algorithms 57
4.1.2 Meta-Model 61
4.1.3 Analysis of Exemplary Transmission Systems 63
4.2 Parallelization of a Simulation on a Graphics Processing Unit 67
4.2.1 Implementation of the FFT and Split-Step Fourier Method on a GPU 68
4.2.2 Stratified Monte-Carlo Sampling Technique 78
4.3 Analytical Modeling of the Signal Quality 83
4.3.1 Linear Degradation Effects 84
4.3.2 Nonlinear-Degradation Effects 87
4.3.3 System Example 94
4.4 Summary and Discussion 97
References 99

Part II Optical Network Operation

5 Dynamic Operation of Fiber Optical Transmission Networks 105
5.1 Network Architecture 106
5.2 Demand Model 109
5.3 Constraint-Based Routing and Regenerator Placement 111
5.3.1 Assessment of the Signal Quality by a Single Figure of Merit 111
5.3.2 Physical Layer Impairment Aware Routing Algorithm . . . 114
5.3.3 Regenerator Placement Heuristic 116
5.3.4 Results 118
5.3.5 Reduction of the Required Number of Electrical Regenerators 121
5.4 Extensions to High Bit Rate Systems with Novel Modulation Formats 125
5.5 Improvement of Energy Efficiency 129
5.5.1 Power Consumption of Deployed Components 131
5.5.2 Grooming 132
5.5.3 Approach for Reducing Core Network Energy Consumption 133
5.5.4 Examplary Study 134
5.5.5 Reduction of Energy Consumption by Load-Adaptive Operation 138

5.6 Summary and Discussion 140
References 142

6 Conclusions and Outlook 147
References 151
