

Part I MS: Understanding the Disease

1	What Is MS? A First Overview	3
1.1	Jennifer's Story	3
1.2	First Things First: A Few Facts and Figures About MS	6
1.3	How the Central Nervous System Is Structured: Anatomy	7
1.3.1	The Central Nervous System: Brain and Spinal Cord	7
1.3.2	Corpus Callosum and Spinal Cord	7
1.4	Immune System and its Influence on the Central Nervous System: The Consequences	10
1.4.1	When the Body Attacks Itself: Autoimmune Disease	10
1.4.2	Nerve Cell: Dendrites, Axon and its Sheath, the Myelin	11
1.4.3	Short Circuit in the Nervous System and Its Consequences	12
1.4.4	Iceberg Model: Disease Activity and Inflammatory Activity	13
1.5	How Multiple Sclerosis Manifests Itself: MS Relapse and Typical Symptoms	14
1.5.1	"Typical" MS Symptoms	15
1.5.2	MS Can Be Overlooked at First	17
1.6	How the Disease Can Run Its Course	17

2	Do I Really Have MS?	19
2.1	The Path to Diagnosis	19
2.1.1	Important Diagnostic Criteria: Spatial and Dissemination in Time	19
2.2	What Tests Are Used to Detect MS: Methods	20
2.2.1	Questions About Questions: What the Anamnesis Can Do	21
2.2.2	When Your Doctor Swings the Hammer: The Neurological Examination	21
2.2.3	Measuring the “Cable Run” Electrically: The “EPs”	21
2.2.4	For the Earliest Possible Detection: The MRI	22
2.2.5	More Than Just Water: CSF Examination and Oligoclonal Bands	22
2.2.6	CIS: The Clinically Isolated Syndrome	23
2.2.7	Changed Diagnostic Criteria Since 2017	24
3	A Trip into Our Immune System	25
3.1	The Players in Our Immune System: Lymphocytes, Antibodies and Others	25
3.1.1	The Stem Cell in the Bone Marrow: The “Mother” of the Immune System	26
3.1.2	The Lymphoid and the Myeloid Progenitor Cell	27
3.1.3	The White Blood Cells: “The Police” in the Blood	27
3.1.4	The Innate Immune System: Granulocytes, Monocytes and Macrophages	28
3.1.5	The Acquired Immune System: T and B Lymphocytes	28
3.1.6	Friend or Foe: The Maturation Process of T Lymphocytes and Immunological Imprinting	29
3.1.7	The B Lymphocytes and the Perfect Defence	31
3.1.8	The Phagocytes: “Big Eaters”	31
3.1.9	T Lymphocyte Activation: Here We Go!	33
3.1.10	The Counterparts: The Regulatory T Lymphocytes	33
3.1.11	B Lymphocyte Activation, Plasma Cells and Custom-Made Antibodies	33
3.1.12	Reminder: The Memory Cell	36
3.2	The Inflammatory Attack Against the Nervous System	38
3.2.1	Activated T Lymphocytes Invade the Brain	38

	Contents	xi
3.2.2	T Lymphocytes in Imbalance: The T-Regulatory Cells Are Weakening	39
3.2.3	The Attack Against the Myelin: Common Cause with the B Lymphocytes	41
3.2.4	B-Cell Nests: A New Discovery	43
4	Why MRI?	45
4.1	My MRI Report: <i>Not</i> a Closed Book!	45
4.2	Anatomical Terms You Should Know	46
4.2.1	The Brain in Slices: The Axial Sectional Plane in MRI	47
4.2.2	Cortex, White Matter and Ventricles: Where Do I Find What?	48
4.2.3	The Brain in Longitudinal Section: The Corpus Callosum and the Roof of the Cerebellum in Focus	48
4.2.4	All Good Things Come in Threes: The Coronal Plane	49
4.3	Where MS Sits in the Body	50
4.4	How the MRI Works	52
4.4.1	Magnetic Field and Hydrogen Atoms	52
4.4.2	High-Frequency Pulse (HF Pulse) and Hydrogen Atoms	53
4.4.3	The Image Contrast: How the Different Images Are Created	54
4.5	How to Read the MRI: The Image Contrasts	54
4.5.1	The Image Contrast T1 and T2	55
4.5.2	T1-Weighted Images: MS Lesions Can Hide	56
4.5.3	T2-Weighted Images: Here You Can See More	57
4.5.4	The T2 Special Forms: T2-FLAIR, PD and DIR Sequence	58
4.5.5	T2-PD: Proton Weighted	58
4.5.6	T2-FLAIR: For a Good Overview	59
4.5.7	The DIR Sequence: Shows Lesions in the Cerebral Cortex	59
4.5.8	In a Nutshell	60
4.6	Why the Contrast Medium Is Important	62
4.6.1	The MRI Procedure	62

4.6.2	T1-Weighted Images: Fresh Acute MS Lesions Particularly Visible	62
4.6.3	Age Determination of MS Lesions Possible Thanks to Contrast Agent	63
4.6.4	Early Diagnosis Thanks to Contrast Agent	64
4.7	“Black Holes”, “Footprints”, Brain Atrophy: And What They Mean	64
4.7.1	The Healing Process After Acute Inflammation: Black Holes and Footprints	64
4.7.2	When the Brain Changes: Brain Atrophy	66
4.8	When an MRI Is Necessary: The “MRI for Diagnosis” and the “Follow-Up MRI”	67
4.8.1	The MRI for Diagnosis	67
4.8.2	The MRI for Follow-Up	68
4.9	Typical MRI Images in MS	70
4.9.1	Corpus Callosum Lesions	70
4.9.2	Brainstem Lesions	70
4.9.3	Cock’s Comb-Like White Matter Lesions, Also Called “Dawson Fingers”	71
4.9.4	Black Holes	72
4.9.5	New Contrast-Absorbing Lesions (Fig. 4.26)	73
4.9.6	Lesion in the Cervical Spinal Cord (Fig. 4.27)	74
4.9.7	Brain Atrophy (Fig. 4.28)	75
4.9.8	The MRI Report: <i>Not</i> a Closed Book!	76
5	The Most Important Things About the Cerebrospinal Fluid	77
5.1	Basics of the Cerebrospinal Fluid	77
5.1.1	Cerebrospinal Fluid: What It Is and Where It Comes From	77
5.1.2	Blood and Cerebrospinal Fluid: Two Separate Areas	78
5.2	How a Lumbar Puncture Works	79
5.2.1	Practical Procedure	79
5.2.2	After That ...	79
5.3	What the Lumbar Puncture Tells Us: The Evaluation	80
5.3.1	The CSF Examination: Cell Count, Total Protein, Sugar and Lactate	80
5.3.2	Blood–Brain Barrier Function: Albumin Shows What Is Going On	81

	Contents	xiii
5.3.3	The Albumin Quotient	81
5.3.4	Antibodies Made in the CNS Itself: The IgG Quotient	82
5.3.5	The Reiber Diagram	82
5.3.6	Deviations Upwards on the Vertical: Too Much IgG in the CSF	83
5.3.7	Deviations to the Right on the Horizontal Axis: Too Much Albumin in the CSF	84
5.3.8	And Now a Few Examples: The Normal Finding	85
5.3.9	MS-Typical Findings: Intrathecal IgG Production	85
5.3.10	Another MS-Typical Constellation	86
5.3.11	Isoelectric Focusing and Oligoclonal Bands (OCBs)	87

Part II MS: Understanding the Therapy

6	How MS Is Treated	93
7	What To Do in an Acute MS Attack	95
7.1	Cortisone Pulse Therapy: How Is It Done?	95
7.2	Plasma Exchange Treatment: Plasmapheresis and Immunoadsorption	96
8	I'm Fine: Why Therapy?	97
9	MS Therapy Yesterday and Today	99
9.1	Development of the MS Therapy Landscape	99
9.2	Interferons and Glatiramer Acetate	100
9.3	Natalizumab and Fingolimod for Escalation	100
9.4	Alternative in Tablet Form: Teriflunomide and Dimethyl Fumarate	100
9.5	Long-Acting Interferon: PEG Interferon	101
9.6	Antibody Therapies: Alemtuzumab and Ocrelizumab	101
9.7	Cladribine: Oral Pulse Therapy	101
9.8	Siponimod Approved for SPMS	101
9.9	Ozanimod and Ponesimod	102
9.10	Ofatumumab	102

9.11	Natalizumab (s.c.)	102
9.12	Diroximel Fumarate	102
9.13	Therapy Goal Today: Individual Therapy—Something for Everyone	102
9.13.1	Therapy Concept: Basic and Escalation Therapy	103
9.13.2	New Therapy Concept: Therapy Decisions Based on Prognosis	103
9.13.3	Prognosis Assessment: There Are Risk Factors	104
9.13.4	Individual Therapy Decision	104
9.13.5	“Hit Hard and Early” and “Treat to Target”	105
9.13.6	Individual Therapy: Take Life Situation into Account	105
10	How the Progression of the Disease Can Be Influenced: The MS Drugs in Detail	107
10.1	The Approved Drugs in Detail	107
10.2	How What Works	108
10.2.1	Interferons and Glatiramer Acetate	108
10.2.2	Natalizumab	108
10.2.3	Fingolimod	109
10.2.4	Teriflunomide	109
10.2.5	Dimethyl Fumarate	109
10.2.6	Alemtuzumab	110
10.2.7	Cladribine	110
10.2.8	Ocrelizumab	110
10.2.9	Siponimod	111
10.2.10	Ozanimod	111
10.2.11	Ofatumumab	112
10.2.12	Natalizumab Subcutaneous (s.c.)	112
10.2.13	Ponesimod	112
10.2.14	Diroximel Fumarate	112
10.3	No Effect Without Side Effect	113
10.4	JCV and PML: What Is It?	113
10.5	Regulatory Studies, Expert Information and “Real-World Data”	114
11	The Therapy Goal Has a Name: NEDA	117
11.1	Paraclinical Course Parameters: MRI	117
11.2	Dreams of the Future: Neurofilaments	118
11.3	Clinical Course Parameters: Relapse Rate and Disability Progression	118

11.4	The EDSS Score Shows Disability Progression	119
11.5	The Hidden Symptoms: Fatigue and Cognition	120
11.6	In a Nutshell	120
12	MS and Vaccinations	121
12.1	Active and Passive Vaccination	121
12.2	Why Is the Vaccination Issue So Important in MS Now?	122
12.3	Distance Good: All Good	123
13	MS and the Desire to Have Children	125
13.1	The Importance of Pregnancy Registers and MS	126
13.2	MS Is Not a Hereditary Disease	127

Part III MS: And What You Can Do Yourself

14	Self-Initiative Helps	131
14.1	From Self-Experimentation to Case Reports	131
14.2	The Intestine in the Focus of Research	133
15	Forest Fire MS	135
15.1	The MS Numbers Are Increasing	135
15.2	Not Victims of Our Genes: Environmental Factors in Our Sights	136
16	Western Diet and Blue Zones	139
16.1	Our Diet Has Changed: “Western Diet”	140
16.2	Ready-Made Products: Chemistry Replaces Nature	140
16.3	Create Awareness	141
16.4	“Blue Zones”: Healthy Ageing	142
17	Nutrition Works	145
17.1	Dietary Fibre and Secondary Plant Compounds	145
17.2	Effects of the Plant-Based Diet	146
17.3	The “China Study”	146
17.4	China’s Shift to the “Western Diet” and Its Consequences	147
17.5	What Can a Plant-Based Mediterranean Diet Do?	148

18	The Intestine and Its Inhabitants	151
18.1	What Does the Gastrointestinal Tract Look Like?	151
18.2	Three Layers: Mucosa, Connective Tissue and Musculature	152
18.3	The Intestine Has Its Own Nervous System: The “Enteric Nervous System”	153
18.4	The Intestine and Its Own Immune System: The “GALT”	154
18.5	The Intestine Has Immense Possibilities for Interaction	155
19	Microbiota and Microbiome	157
19.1	Bacteria in the Majority	157
19.2	Our Intestine: A Giant “Bioreactor”	158
20	How the Microbiome Develops	161
20.1	A Healthy Intestine = Eubiosis, a Diseased Intestine = Dysbiosis	161
21	How Bacteria Can Be Identified	163
21.1	Microbiome Analysis by “Next-Generation Sequencing” (NGS)	163
21.2	Species Richness of the Microbiota	164
22	The Stool Transplant	165
22.1	FMT and Practical Implementation	166
22.2	FMT and Consequences	166
23	The Bowel and MS: What Does Scientific Research Say?	169
23.1	Animal MS Studies on Mice: “EAE”	170
23.2	Does MS Start in the Gut?	170
23.3	Gut Bacteria and MS	170
23.4	The Metabolic Products of the Bacteria and MS	172
23.5	High-Fibre Diet: Energy Source for the Intestinal Cells	173
23.6	Short-Chain Fatty Acids and Immune System	173
23.7	Nutrition and Microbiota	174
23.8	Back to the Western Diet	175
23.9	Many Studies, Many Pieces of the Puzzle	175
23.10	Just Give It a Try	176
23.11	Propionate: As a Food Supplement	176

24	Vitamin D: Sense and Nonsense	179
24.1	What Vitamin D Can Do	179
24.2	Where Vitamin D Comes from	180
24.3	In-House Production	180
24.4	Own Production Has a Hard Time in the Northern Climes	182
24.5	Let Us Start with the Sun	182
24.6	From the Sun to Vitamin D Administration (Vitamin D Substitution)	183
24.7	About Calcidiol Units and Standard Values	183
24.8	Which Vitamin D?	184
24.9	How Much Vitamin D3 for Which Target Value?	184
24.10	Effects of Vitamin D on the Immune System	185
24.11	Effect of the Sun	186
24.12	Current Vitamin D Study	186
25	Action Plan and Recipes to Follow	189
25.1	Plant-Based Does Not Mean: No More Meat!	189
25.2	Our Attitude Is Crucial	190
25.3	High-Fibre Plant-Based with Good Oils Is Key!	190
25.4	What You Should Eat	191
25.5	What You Should Avoid	192
25.6	No “Rush Jobs”	192
25.7	What If ...	193
25.8	Is There Anything Missing for the Start?	194
25.9	Recipes to Try Out: The Small “Starter Set”	194
26	The Most Important Recommendations Summarised	209
26.1	Nutritional Optimisation	209
26.2	Sun and Vitamin D3	209
26.3	Movement and Relaxation	210
26.4	In Conclusion	211
	Glossary	213
	Bibliography	217
	Index	225
