About the Authors *xi*

Foreword 1 *xii*

Foreword 2 *xiv*

Preface *xvi*

Abbreviations *xxi*

Introduction *xxiii*

1	Overview of Electronic Structure Crystallography	1
1.1	Introduction	1
1.1.1	History of Electronic Structure Crystallography	4
1.1.2	The Beginnings of X-ray Crystallography and Quantum Mechanics	4
1.1.3	The Nascent Period of Experimental Electronic Structure Research	5
1.1.4	Developments of Pseudo-atom Models	5
1.1.5	Developments of Experimental Electron-density Matrix Models	9
1.1.6	Developments of Experimental Electron Wavefunction Models	12
1.1.7	Developments in Electron Diffraction-Based Studies of Electronic Structures	14
1.2	Basic Descriptors of Electronic Structure	15
1.2.1	Electron Density	15
1.2.2	Residual Density	16
1.2.3	Deformation Density	17
1.2.4	Electron Wavefunction and Density Matrix	19
1.3	Experimental Characterization of Electronic Structure	21
1.3.1	Experimental Electronic Structure Measurement with X-ray Single-crystal Diffractometer	22
1.3.1.1	X-ray Source	22
1.3.1.2	Goniometer	23
1.3.1.3	X-ray Detector	23
1.3.1.4	Cryogenic Systems	23
1.3.2	Key Aspects of Experimental Electronic Structure Measurement	24
1.3.2.1	Single-crystal Samples	24
1.3.2.2	Measurement Process	25

1.3.2.3	Data Correction	25
1.3.2.4	Examination of the Quality of Electronic Structure Refinement	26
	References	26
2	First-Principles Calculations of the Electron Density Functions	35
2.1	Introduction	35
2.2	Basic Framework and Assumptions of the First-Principles Calculations	36
2.3	Density Matrix and Density Function	38
2.3.1	Basic Definition	38
2.3.2	Electron Density	39
2.3.3	Momentum Density	40
2.4	Hartree–Fock (HF) and Kohn–Sham (KS) Methods	42
2.4.1	Basic Theoretical Framework	42
2.4.2	Periodic Solutions of Hartree–Fock (HF) and Kohn–Sham (KS) Equations	44
2.4.3	Calculation of Crystal Density Matrix and Density Function	45
2.4.4	Pseudopotentials	46
2.4.5	Basis Set	47
	References	48
3	Topological Indices and Properties of Electronic Structures	49
3.1	Introduction	49
3.2	Analysis of Topological Atoms in Molecules	50
3.2.1	Topological Description of the Electron Density	50
3.2.2	Gradient Vector Field and Topological Atoms	53
3.2.3	Bond Path and Molecular Topological Graph	54
3.2.4	Laplacian	54
3.2.5	Topological Properties of Chemical Bonds	55
3.2.5.1	Electron Density at Bond Critical Points	55
3.2.5.2	Bond Radius and Bond Path Length	55
3.2.5.3	Laplacian of Electron Density at the Bond Critical Points	56
3.2.5.4	Ellipticity	56
3.2.5.5	Energy Density of Bond Critical Points	56
3.2.5.6	Delocalization Index and Bond Order	57
3.2.6	Topological Atomic Properties	59
3.2.6.1	Atomic Charges	59
3.2.6.2	Atomic Volume	59
3.2.6.3	Atomic Kinetic Energy	59
3.2.6.4	Laplacian	60
3.2.6.5	Total Atomic Energy	60
3.2.6.6	Atomic Dipole Moment	62
3.2.6.7	Atomic Quadrupole Moment	62

3.2.6.8	Atomic Information Entropy	63
3.3	Chemical Interaction Analysis	63
3.3.1	Source Function	63
3.3.2	Electron Localization Function	65
3.3.3	Reduced Density Gradient	68
3.4	Coarse Graining and Energy Partition of the Density Matrix	69
3.4.1	Partition of the Density Matrix in Real Space	69
3.4.2	Energy Partition	72
3.4.3	Electron Population Statistics	75
3.5	Restricted Space Partition	77
3.5.1	ω -Restricted Partition	77
3.5.2	Restricted Electron Population Analysis	80
3.5.3	Quasi-continuous Distribution	81
3.5.4	Electron Localization Indicators (ELI)	82
3.5.4.1	Same-spin Electron Pairs	83
3.5.4.2	Singlet and Triplet Electron Pairs	84
3.5.4.3	ELI in Momentum Space	85
3.6	Intermolecular Interaction Energy	86
3.6.1	Interaction Energy of Experimental Electron Density	86
3.6.2	Pseudoatomic Representation of Electrostatic Interactions	88
3.6.2.1	Multipole Expansion Approximation	88
3.6.2.2	Exact Potential and Multipole Moment (EPMM) Model	89
3.6.2.3	Promolecular Approximation	89
3.6.3	Non-electrostatic Interactions	90
3.6.4	Lattice Energy	91
3.6.5	Interaction Energies Obtained from Experimental Charge Analysis	93
	References	94

4 Principles of Electronic Structure Measurement 97

4.1	Introduction	97
4.2	Thermal Vibration Analysis	100
4.2.1	Lattice Dynamics	101
4.2.2	Atomic Displacement Parameters	103
4.2.3	Rigid Fragment Analysis	106
4.2.4	Neutron Diffraction-assisted Analysis	108
4.2.4.1	Temperature	108
4.2.4.2	Absorption	109
4.2.4.3	Extinction	109
4.2.4.4	Thermal Diffuse Scattering	109
4.2.4.5	Multiple Scattering	109
4.3	Scattering Experiments	110
4.3.1	X-ray Diffraction	110
4.3.2	Polarized Neutron Diffraction	111
4.3.3	Compton Scattering	112
4.4	Refinement Algorithm for Experimental Electronic Structure	113

4.4.1	Least-square Method	113
4.4.1.1	Mathematical	113
4.4.1.2	Least-square Refinement of Structure Factors	114
4.4.1.3	Parameter-estimated variance and covariance	116
4.4.2	Maximum Entropy Method	117
	References	120
5	Pseudo-atom Models	123
5.1	Introduction	123
5.2	Independent Atom Model	124
5.3	Kappa Model	125
5.4	Multipole Model	126
5.4.1	Multipole Spherical Harmonics	126
5.4.2	Real Spherical Harmonic Density Function	127
5.4.3	Radial Distribution Functions	128
5.4.4	Multipole Model Framework	129
5.4.5	Aspheric Atomic Scattering Factors	130
5.4.6	Multipolar Model of Core Electron Expansion	131
5.5	Spin Density Model	132
5.5.1	Pure Spin Contribution	132
5.5.1.1	Atomic Orbital Model of Spin Density	132
5.5.1.2	Multipole Refinement of Spin Density	134
5.5.2	Spin and Orbital Contributions	135
5.5.3	Non-collinear Magnetism	136
5.5.4	Combinatorial Refinement of Electron Density and Spin Density	136
5.6	Other Electron Density Models	137
5.6.1	The X-ray Atomic Orbital (XAO) Model	137
5.6.1.1	Atomic Single-electron Orbitals in a Crystal Field	137
5.6.1.2	Electron Density and Structure Factor	141
5.6.2	X-ray Molecular Orbital Model (XMO)	143
5.6.2.1	Molecular Orbital and Electron Density	143
5.6.2.2	Structure Factors for Monocentric and Bicentric Terms	144
5.6.2.3	Processing of Temperature Factors	147
5.6.3	Molecular Orbitals with Variable Occupation Numbers Model (MOON)	149
	References	150
6	Density Matrix Model	153
6.1	Introduction	153
6.2	Density Matrix Model	154
6.2.1	Definition of the Density Matrix	154
6.2.2	Localized Model of the Density Matrix	154
6.3	Correlation of Density Matrix to Scattering Experiments	156
6.3.1	Dynamic Scattering Factor	156
6.3.2	Static Structure Factor	157

6.3.3	Elastic Scattering	157
6.3.4	Inelastic Scattering	158
6.4	Reconstruction and Refinement of the Density Matrix	160
6.4.1	Bayesian Method	160
6.4.2	Combined Refinement of Different Types of Data	161
6.4.3	Refinement of the One-electron Reduced Density Matrix (1-RDM)	163
6.4.4	Combinatorial Refinement of Structure Factor and Compton Profile Data	165
6.4.5	Spin-resolved One-order Reduced Density Matrix (1-SRDM) Refinement	165
6.4.5.1	Basic Framework	165
6.4.5.2	Molecular Modeling	166
6.4.5.3	Magnetic Structure Factor and Magnetic Compton Profile	167
6.4.5.4	Variation of the Basis Functions	167
6.4.5.5	Variation of Spin Population Matrices	168
	References	169

7 Electron Wavefunction Models 171

7.1	Introduction	171
7.2	X-ray Constrained Wavefunction (XCW) Model	173
7.2.1	Mathematical Framework	173
7.2.2	Hirshfeld Atom Refinement	174
7.2.2.1	Selection of Wavefunction	174
7.2.2.2	Electron Density	175
7.2.2.3	Hirshfeld Atomic Partitioning Method	176
7.2.2.4	Calculation of the Structure Factor	176
7.2.3	X-ray Constrained Wavefunction Refinement	178
7.2.3.1	Special Treatment for Thermal Vibrations	178
7.2.3.2	Density Matrix Representation of Structure Factor	179
7.2.3.3	Experimental Constrained Wavefunction Refinement	179
7.2.4	Open Shell System Method	180
7.2.5	Treatment of Relativistic Effects	182
7.3	The X-ray-Constrained Extremely Localized Molecular Orbital Method	183
7.3.1	Theoretical Extremely Localized Molecular Orbitals	183
7.3.2	Refinement of the Experimentally Constrained Extremely Localized Molecular Orbitals	185
	References	187

8 Functional Electronic Structures and Functional Motif of Materials 189

8.1	Introduction	189
8.2	Material Functional Motif	190
8.2.1	Crystal Structure	191
8.2.2	Electronic Structure	193

x | *Contents*

8.2.3	Magnetic Structure	195
8.2.4	Modulated Defects	197
8.2.5	Statistical Defects	199
8.2.6	Local Defects	200
8.3	Functional Electronic Structures	201
	References	206
