1 History of MR Mammography	1
2 Preparing and Informing the Patient	2
3 Technique and Methods	3
Basic Principles of Magnetic Resonance Imaging .	3
Diagnostic Units	4
Diagnostic Systems for	
MR Mammography	4
Sequence Synonyms	4
Surface Coils	5
Time of Examination	5
Patient Positioning	6
Breast Compression	6
Field Strength	8
2D and 3D Techniques	9
Definition	9
Comparison of the 2D and 3D Techniques	10
Study Protocols	11
Maximum Protocol (IIBM Study Protocol)	12
Ultrafast Technique	13
High-resolution (HR) Technique	14
Fat Saturation Techniques	15
T2-weighted Sequences	16
Temporal Resolution	16
Spatial Resolution	17
Slice Orientation	18
Paramagnetic Contrast Materials	18
Image Postprocessing	20
Automated Image Postprocessing and Analysis ...	21
4 Tumor Angiogenesis	22
Basic Principles	22
Tumor Angiogenesis and MR Mammography	23
5 Diagnostic Criteria	24
Precontrast Examination	24
Contrast-enhanced T1-weighted Examinations ...	25
Morphology	25
Form	25
Margins	26
Pattern	26
Kinetics	27
Dynamics	28
Initial Signal Increase	28
Postinitial Signal Behavior	29
Criteria of Malignancy	30
Evaluation Score	30
6 Artifacts and Sources of Error	32
Incorrect Positioning	32
Improper Administration of Contrast	33
Motion Artifacts	34
Out-of-Phase Imaging	35
Maladjustments of Transmitter and Receiver	
Settings	36
Susceptibility Artifacts	37
Cardiac Flow Artifacts	38
Coil Artifacts	38
Incorrect Region of Interest (ROI)	39
Signal Alteration after Diagnostic Procedures	40

7 Normal Findings in MR Mammography	41
Morphology	41
Blood Supply	41
Parenchyma and Age	43
Parenchymal Asymmetry, Accessory Glandular Tissue	44
Nipple and Retromamillary Region	45
Interindividual Variations	46
Intraindividual Fluctuations	47
Hormone Replacement Therapy	48
Pregnancy and the Lactating Breast	49
8 Benign Changes	50
Papillomas	50
Adenomas	54
Fibroadenoma	56
Variants of Fibroadenomas	65
Benign Phyllodes Tumor (Synonyms: benign phylloides tumor, fibroadenoma phyllodes)	66
Lipomas	68
Fibrocystic Breast Tissue	70
Adenosis (Synonym: Adenosis mammae)	74
Simple Cysts	77
Complicated Cysts	80
Radial Scar (Synonyms: sclerosing papillary proliferation, indurative mastopathy, radial sclerosing lesion)	83
Hamartoma (Figuratively: „Breast within the breast“; Kronsbein and Bässler 1982)	86
Acute Mastitis	88
Chronic Nonpuerperal Mastitis	90
Intramammary Lymph Nodes	92
Fat necrosis (Synonym: liponecrosis microcystica calcificata)	94
Postoperative Changes	98
Seroma	98
Hematoma	99
Abscess	100
Scar tissue	101
Changes Following Radiotherapy	102
9 Malignant Changes	104
Intraductal Tumor Forms	104
Ductal Carcinoma In Situ (DCIS)	104
Results of Literature Survey	107
Lobular Carcinoma In Situ (LCIS)	108
Invasive Tumor Forms	110
Invasive Ductal Carcinoma	110
Results of Literature Survey	116
Invasive Lobular Carcinoma	117
Results of Literature Survey	119
Medullary Carcinoma	120
Mucinous Carcinoma	122
Invasive Papillary Carcinoma	124
Tubular Carcinoma	126
Other Tumor Forms	128
Inflammatory Carcinoma	128
Paget Disease of the Nipple	130
Malignant Phyllodes Tumor	132
Sarcoma	134
Metastases to the Breast	136
10 MR Mammography in Men	138
Gynecomastia	138
Male Breast Cancer	139
11 Indications for MR Mammography	140
MR Mammography in Patients with Ambiguous Findings	140
Preoperative Staging	144
Tumor Size	144
Extensive Intraductal Component (EIC)	144
Multifocality	144
Multicentricity	144
Synchronous Bilateral Breast Cancer	148
N Staging	148
MR Mammographic Consequences for Therapeutic Strategy	148
Neoadjuvant Chemotherapy	150
Carcinoma of Unknown Primary (CUP Syndrome)	152
Differentiation between Scar and Carcinoma	154
Follow-up after Lumpectomy	156
Follow-up after Breast Reconstruction with Implant	160
Increased Breast Cancer Risk	161

12 Differential Diagnoses and Strategic Considerations	162
Focal Enhancement	162
Round or Ovoid, Homogeneously Enhancing	
Lesion with Well-defined Borders	162
Multiple Round or Ovoid, Homogeneously	
Enhancing Lesions with Well-defined Borders	163
Round or Ovoid, Homogeneously Enhancing	
Lesion with Ill-defined Borders	164
Linear Contrast Enhancement	165
Dendritic Contrast Enhancement	166
Spiculated Contrast-Enhancing Lesion	167
Lesion with Ring, i.e., Peripheral Enhancement	168
Diffuse Enhancement	169
Unilateral Diffuse Contrast Enhancement	169
Bilateral Diffuse Contrast Enhancement	170
13 Prosthesis Diagnostics	171
Examination Technique	171
Measurement Protocols	171
Normal Findings	172
Complications	174
Capsular Contracture	174
Silicone Bleed (Silicone Leaching)	175
Intracapsular Rupture	176
Extracapsular Rupture	178
Silicone Granuloma ("Siliconoma")	179
Autologous Mammoplasty	180
14 MR-guided Interventions	181
Indications for MR-guided Interventions	181
Stereotactic Devices	182
The Göttingen Interventional Device	182
Biopsy Device (Halle)	182
Biopsy Device (Bonn)	182
Biopsy Device (Leipzig)	182
Biopsy Device (Tübingen)	185
MR Breast Biopsy System	185
MRI-compatible Biopsy Equipment	186
MRI-compatible Localization Equipment	188
Confirmation of Complete Excision of Lesion	190
Results	191
15 Quality Assessment	192
Check List for MR Mammography	192
MR Mammography Report	193
MR Breast Phantom	194
16 Present Standing and Perspectives of MR Mammography	196
Present Standing	196
Perspectives	197
