|----------|---|-----------|
| <b>1</b> | <b>Introduction: Main Ideas</b>   | <b>1</b>  |
| 1.1      | Role of Engineering Geological Investigations                                     | 1         |
| 1.2      | Scope and Aim of the Subject. Short History<br>of Soil Mechanics                  | 1         |
| 1.3      | Use of the Continuum Mechanics Methods  | 2         |
| 1.4      | Main Properties of Soils  | 4         |
| 1.4.1    | Stresses in Soil  | 4         |
| 1.4.2    | Settling of Soil  | 6         |
| 1.4.3    | Computation of Settling Changing in Time  | 11        |
| 1.5      | Description of Properties of Soils and Other Materials<br>by Methods of Mechanics | 13        |
| 1.5.1    | General Considerations  | 13        |
| 1.5.2    | The Use of the Elasticity Theory  | 14        |
| 1.5.3    | The Bases of Ultimate Plastic State Theory  | 17        |
| 1.5.4    | Simplest Theories of Retaining Walls  | 21        |
| 1.5.5    | Longtime Strength   | 24        |
| 1.5.6    | Eccentric Compression and Determination of Creep<br>Parameters from Bending Tests | 26        |
| 1.5.7    | Fracture of Tunnel Arch   | 29        |
| <b>2</b> | <b>Main Equations in Media Mechanics</b>  | <b>33</b> |
| 2.1      | Stresses in Body  | 33        |
| 2.2      | Displacements and Strains   | 35        |
| 2.3      | Rheological Equations   | 36        |
| 2.3.1    | Generalised Hooke's Law   | 36        |
| 2.3.2    | Non-linear Equations  | 37        |
| 2.3.3    | Constitutive Equations for Anisotropic Materials                                  | 38        |
| 2.4      | Solution Methods of Mechanical Problems   | 42        |
| 2.4.1    | General Considerations  | 42        |
| 2.4.2    | Basic Equations for Anti-plane Deformation  | 42        |

|          |   |           |
|----------|---|-----------|
| 2.4.3    | Plane Problem .....   | 44        |
| 2.4.4    | Axisymmetric Problem .....  | 46        |
| 2.4.5    | Spherical Coordinates .....   | 47        |
| 2.5      | Economical Profile of Triangular Dam Under Self-Weight<br>and Lateral Pressure of Water ..... | 48        |
| <b>3</b> | <b>Some Elastic Solutions .....</b>   | <b>51</b> |
| 3.1      | Longitudinal Shear .....  | 51        |
| 3.1.1    | General Considerations .....  | 51        |
| 3.1.2    | Longitudinal Displacement of Strip .....  | 52        |
| 3.1.3    | Deformation of Massif with Circular Hole<br>of Unit Radius .....                              | 53        |
| 3.1.4    | Brittle Rupture of Body with Crack .....  | 54        |
| 3.1.5    | Conclusion .....  | 56        |
| 3.2      | Plane Problem .....   | 56        |
| 3.2.1    | Wedge Under One-Sided Load .....  | 56        |
| 3.2.2    | Wedge Pressed by Inclined Plates .....  | 57        |
| 3.2.3    | Wedge Under Concentrated Force in its Apex:<br>Some Generalizations .....                     | 62        |
| 3.2.4    | Beams on Elastic Foundation .....   | 65        |
| 3.2.5    | Use of Complex Variables .....  | 68        |
| 3.2.6    | General Relations for a Semi-Plane<br>Under Vertical Load .....                               | 70        |
| 3.2.7    | Crack in Tension .....  | 70        |
| 3.2.8    | Critical Strength .....   | 71        |
| 3.2.9    | Stresses and Displacements Under Plane Punch .....  | 73        |
| 3.2.10   | General Relations for Transversal Shear .....   | 74        |
| 3.2.11   | Rupture due to Crack in Transversal Shear .....   | 74        |
| 3.2.12   | Constant Displacement at Transversal Shear .....  | 75        |
| 3.2.13   | Inclined Crack in Tension .....   | 76        |
| 3.3      | Axisymmetric Problem and its Generalization .....   | 77        |
| 3.3.1    | Sphere, Cylinder and Cone Under External<br>and Internal Pressure .....                       | 77        |
| 3.3.2    | Boussinesq's Solution and its Generalization .....  | 79        |
| 3.3.3    | Short Information on Bending of Thin Plates .....   | 84        |
| 3.3.4    | Circular Crack in Tension .....   | 87        |
| <b>4</b> | <b>Elastic-Plastic and Ultimate State of Perfect<br/>Plastic Bodies .....</b>                 | <b>89</b> |
| 4.1      | Anti-Plane Deformation .....  | 89        |
| 4.1.1    | Ultimate State at Torsion .....   | 89        |
| 4.1.2    | Plastic Zones Near Crack and Punch Ends .....   | 90        |
| 4.2      | Plane Deformation .....   | 92        |
| 4.2.1    | Elastic-Plastic Deformation and Failure of Slope .....  | 92        |
| 4.2.2    | Compression of Massif by Inclined Rigid Plates .....  | 94        |

|          |   |            |
|----------|---|------------|
| 4.2.3    | Penetration of Wedge and Load-bearing Capacity<br>of Piles Sheet .....        | 99         |
| 4.2.4    | Theory of Slip Lines .....  | 101        |
| 4.2.5    | Ultimate State of Some Plastic Bodies .....                                   | 104        |
| 4.2.6    | Ultimate State of Some Soil Structures .....                                  | 109        |
| 4.2.7    | Pressure of Soils on Retaining Walls .....                                    | 113        |
| 4.2.8    | Stability of Footings .....   | 115        |
| 4.2.9    | Elementary Tasks of Slope Stability .....                                     | 117        |
| 4.2.10   | Some Methods of Appreciation of Slopes Stability .....                        | 119        |
| 4.3      | Axisymmetric Problem .....  | 122        |
| 4.3.1    | Elastic-plastic and Ultimate States<br>of Thick-walled Elements .....         | 122        |
| 4.3.2    | Compression of Cylinder by Rough Plates .....                                 | 125        |
| 4.3.3    | Flow of Material within Cone .....  | 126        |
| 4.3.4    | Penetration of Rigid Cone and Load-bearing<br>Capacity of Circular Pile ..... | 128        |
| 4.4      | Intermediary Conclusion .....   | 129        |
| <b>5</b> | <b>Ultimate State of Structures at Small Non-Linear Strains..</b>             | <b>131</b> |
| 5.1      | Fracture Near Edges of Cracks and Punch at Anti-Plane<br>Deformation .....    | 131        |
| 5.1.1    | General Considerations .....  | 131        |
| 5.1.2    | Case of Crack Propagation .....   | 132        |
| 5.1.3    | Plastic Zones Near Punch Edges .....  | 134        |
| 5.2      | Plane Deformation .....   | 134        |
| 5.2.1    | Generalization of Flamant's Problem .....                                     | 134        |
| 5.2.2    | Slope Under One-Sided Load .....  | 137        |
| 5.2.3    | Wedge Pressed by Inclined Rigid Plates .....                                  | 141        |
| 5.2.4    | Penetration of Wedge and Load-bearing Capacity<br>of Piles Sheet .....        | 146        |
| 5.2.5    | Wedge Under Bending Moment in its Apex .....                                  | 147        |
| 5.2.6    | Load-bearing Capacity of Sliding Supports .....                               | 151        |
| 5.2.7    | Propagation of Cracks and Plastic Zones<br>near Punch Edges .....             | 153        |
| 5.3      | Axisymmetric Problem .....  | 156        |
| 5.3.1    | Generalization of Boussinesq's Solution .....                                 | 156        |
| 5.3.2    | Flow of Material within Cone .....  | 158        |
| 5.3.3    | Cone Penetration and Load-bearing Capacity<br>of Circular Pile .....          | 162        |
| 5.3.4    | Fracture of Thick-walled Elements due to Damage .....                         | 163        |
| <b>6</b> | <b>Ultimate State of Structures at Finite Strains .....</b>                   | <b>169</b> |
| 6.1      | Use of Hoff's Method .....  | 169        |
| 6.1.1    | Tension of Elements Under Hydrostatic Pressure .....                          | 169        |
| 6.1.2    | Fracture Time of Axisymmetrically Stretched Plate .....                       | 171        |

|       |  |     |
|-------|--|-----|
| 6.1.3 | Thick-Walled Elements Under Internal<br>and External Pressures .....                             | 172 |
| 6.1.4 | Final Notes .....  | 174 |
| 6.2   | Mixed Fracture at Unsteady Creep .....   | 174 |
| 6.2.1 | Tension Under Hydrostatic Pressure .....   | 174 |
| 6.2.2 | Axisymmetric Tension of Variable Thickness Plate<br>with Hole .....                              | 175 |
| 6.2.3 | Thick-Walled Elements Under Internal<br>and External Pressures .....                             | 177 |
| 6.2.4 | Deformation and Fracture of Thin-Walled Shells<br>Under Internal Pressure .....                  | 180 |
| 6.2.5 | Thin-Walled Membranes Under Hydrostatic Pressure ..  | 184 |
| 6.2.6 | Two other Problems .....   | 186 |
| 6.2.7 | Ultimate State of Anisotropic Plate<br>in Biaxial Tension .....                                  | 188 |
|       | Conclusion .....   | 192 |
|       | References .....   | 195 |
|       | Appendices .....   | 199 |
| A     | Computation of $p^*$ for Brittle Materials Which<br>do not Resist Tension .....                  | 201 |
| B     | Values of $K_G$ in (3.127) .....   | 203 |
| C     | Values of $K'$ in (3.128) .....  | 205 |
| D     | Values of $\beta_1$ , $\beta_2$ in Fig 4.33 and factors A, B in (4.88) .....                     | 207 |
| E     | Flow of Ideal Plastic Material in Cone .....   | 209 |
| F     | Computation of Stresses at Anti-plane Deformation<br>of Massif with Crack and Moving Punch ..... | 211 |
| G     | Some Computations on Bending of Wedge .....  | 215 |
| H     | Bases of Applied Creep Theory .....  | 219 |
| I     | Inelastic Zones Near Crack in Massif at Tension<br>and Pressed Punch .....                       | 223 |
| J     | Inelastic Zones Near Crack and Punch Ends<br>at Transversal Shear .....                          | 225 |
| K     | Flow of Material in Cone .....   | 227 |

**L    The Use of Hypotheses of Creep ..... 229**

**M    Use of the Coulomb’s Law for Description of Some  
      Elastic-Plastic Systems at Cycling Loading ..... 231**

**N    Investigation of Gas Penetration  
      in Polymers and Rubbers ..... 237**

**O    Fracture of Optimal Profile Rotating Disk ..... 241**

**P    Strength of Anisotropic Tubes at Different Loadings.  
      Construction of Potential Function ..... 247**
