1 Quantum Approach to Classical Thermodynamics and Optimization	1
R.D. Somma and G. Ortiz	
1.1 Introduction	1
1.2 Quantum Annealing Strategies for Optimization	4
1.2.1 Classical-to-Quantum Mapping	4
1.2.2 Adiabatic State Preparation: Rates of Convergence	7
1.2.3 Quantum Monte Carlo Methods for Quantum Annealing	10
1.2.4 Quantum Quadratic Speedup	11
1.2.5 Efficient Quantum Gibbs State Preparation of One-Dimensional Systems	15
1.3 Quantum Algorithms for Numerical Integration with No Importance Sampling	16
1.4 Conclusions	19
References	19
2 Non-equilibrium Dynamics of Quantum Systems: Order Parameter Evolution, Defect Generation, and Qubit Transfer	21
S. Mondal, D. Sen, and K. Sengupta	
2.1 Introduction	21
2.2 Quench Dynamics	23
2.2.1 Ultracold Atoms in an Optical Lattice	23
2.2.2 Infinite Range Ising Model in a Transverse Field	29
2.3 Non-adiabatic Dynamics	36
2.3.1 Quenching Across a Critical Surface	39
2.3.2 Non-linear Quenching Across a Critical Point	43
2.3.3 Experimental Realizations	49
2.4 Quantum Communication	51
2.5 Discussion	53
References	55

3	Defect Production Due to Quenching Through a Multicritical Point and Along a Gapless Line	57
	U. Divakaran, V. Mukherjee, A. Dutta, and D. Sen	
3.1	Introduction	57
3.2	A Spin Model: Transverse and Anisotropic Quenching	59
3.3	Quenching Through a Multicritical Point	66
3.4	Quenching Along a Gapless Line	68
3.5	Conclusions	72
	References	72
4	Adiabatic Perturbation Theory: From Landau–Zener Problem to Quenching Through a Quantum Critical Point	75
	C. De Grandi and A. Polkovnikov	
4.1	Introduction	75
4.2	Adiabatic Perturbation Theory	77
4.2.1	Application to the Landau–Zener Problem	80
4.3	Adiabatic Dynamics in Gapless Systems with Quasiparticle Excitations	83
4.4	Adiabatic Dynamics Near a Quantum Critical Point	92
4.4.1	Scaling Analysis	93
4.4.2	Examples	95
4.5	Sudden Quenches Near Quantum Critical Points	103
4.6	Effect of the Quasiparticle Statistics in the Finite Temperature Quenches	106
4.7	Conclusions	109
	References	113
5	Quench Dynamics of Quantum and Classical Ising Chains: From the Viewpoint of the Kibble–Zurek Mechanism	115
	S. Suzuki	
5.1	Introduction	115
5.2	Kibble–Zurek Mechanism	118
5.3	Quench in the Pure Ising Chain	120
5.3.1	Classical Quench	121
5.3.2	Quantum Quench	125
5.4	Quench in the Random Ising Chain	133
5.4.1	Classical Quench	134
5.4.2	Quantum Quench	138
5.5	Conclusion	140
5.5.1	Summary of the Results	140
5.5.2	Discussion and Future Problems	141
	References	142

6 Quantum Phase Transition in the Spin Boson Model	145
S. Florens, D. Venturelli, and R. Narayanan	
6.1 Introduction	145
6.2 The Spin Boson Model	148
6.2.1 The Model	148
6.2.2 The Phases of the SBM	149
6.3 The SBM Using the Majorana Representation	151
6.4 Perturbative Renormalization Group in the Localized Regime	152
6.5 Analyzing the RG Flow	154
6.5.1 The RG Equations for the Ohmic Case ($s = 1$)	154
6.5.2 The RG Equations for the Super-ohmic Case ($s > 1$)	154
6.5.3 The RG Equations for the Sub-ohmic Case ($0 < s < 1$) ..	155
6.6 Mapping to a Long-Ranged Ising Model	156
6.7 A Special Identity	159
6.8 Shiba's Relation for the Sub-ohmic Spin Boson Model	160
6.9 On the Possible Breakdown of Quantum to Classical Mapping ...	161
References	162
7 Influence of Local Moment Fluctuations on the Mott Transition	163
C. Janani, S. Florens, T. Gupta, and R. Narayanan	
7.1 Introduction	163
7.2 The Heisenberg Model	164
7.2.1 Single-Site Representation of the Heisenberg Model	164
7.2.2 The Auxiliary Fermion Representation	167
7.3 The Hubbard–Heisenberg Model	168
7.4 Numerical Results	170
7.4.1 Numerical Results for $J = 0$	171
7.4.2 Numerical Results for Non-zero J	171
7.5 Conclusions, Future Outlook, and Open Problems	175
