

CONTENTS

LECTURE 1

IR Characterization of Metal Catalysts Using CO as Probe Molecule

by F. Maugé, C. Binet and J.C. Lavalley

1. Introduction	1
2. Molecules adsorbed on a metal surface	1
2.1. Electric field.....	1
2.2. Selection rule: an application.....	3
2.3. IR characterization of adsorbed molecules	4
3. CO Adsorption.....	5
3.1. Electronic interaction between the CO molecule and transition metals	5
3.2. Frequency shifts for varying surface coverage	7
3.2.1. Vibrational coupling (or dynamic effect).....	7
3.2.2. Chemical shift (or static effect)	8
3.2.3. Separation between dynamic and static effects	8
3.2.4. Special case for column IB metals	9
3.3. Structure of the adsorbed molecule layer	9
3.4. Influence of surface defects	12
3.5. Bimetallic catalysts	14
4. Examples of characterization of supported Pd Catalyst.....	14
4.1. Evaluation of the relative amount of crystallographic faces on Pd/Al ₂ O ₃	14
4.2. Formation of carbonyl clusters by CO adsorption on highly dispersed Pd/CeO ₂	16

LECTURE 2

Prolegomena to Magnetic Circular Dichroism in X-Ray Absorption Spectroscopy

by Ch. Travers

1. Introduction	19
2. Catalysts preparation.....	19
2.1. Generalities	19
2.2. Theoretical notions	20
2.2.1. Young-Laplace law	21
2.2.2. Kelvin and Ostwald laws.....	22
2.2.3. Supersaturation. Nucleation and growing of particles.....	23
2.2.3.1. Influence of the supersaturation on nucleation and particles growing	24
2.3. Review of the main elementary steps	27
2.3.1. Thermal or hydrothermal treatments	27
2.3.2. Forming	29
2.3.2.1. Forming microgranules	30
2.3.2.2. Forming granules.....	30
2.3.3. Impregnation of active agents on a support.....	33
2.3.3.1. Impregnation without interaction	33
2.3.3.2. Impregnation with interactions by ionic exchange.	36
2.3.4. Unit operations after impregnation.....	40
3. Conclusion: example of preparation of industrial catalysts	42

LECTURE 3

Measurement of Catalyst Performances at the Laboratory

by M. Forissier

1. Catalyst testing and kinetic study	45
1.1. Catalyst testing.....	45
1.2. Kinetic study	46
2. Some definitions	46
2.1. Complex chemical reactions.....	46
2.2. Elementary step	46

2.3. Kinetic expression	47
2.4. Reaction rates.....	47
2.5. Conversion, yield and selectivity	48
2.6. Time on stream and residence time	48
3. Chemical or diffusion limitations	48
3.1. In a differential flow reactor	49
3.2. In an integral flow reactor.....	49
4. Experimental devices for kinetic studies	50
4.1. Global point of view	50
4.1.1. Choice of the experimental conditions of the study	50
4.1.2. The control and the knowledge of the reactions conditions ..	50
4.1.3. Some experimental difficulties to detect	50
4.1.4. How to obtain practically the chosen reaction conditions.....	50
4.2. Some laboratory reactors often used.....	50
4.2.1. The batch reactor	50
4.2.2. Fixed bed flow reactor without recirculation	52
4.2.3. Particular case: differential flow reactor	53
4.2.4. Perfectly mixed flow reactor	53
4.2.5. Pulse reactor	55
4.2.6. TAP (Temporal Analysis of Products).....	55
4.2.7. Laboratory reactors for triphasic reactions with gas-, liquids- and solid catalyst.....	56
5. Reaction scheme	56
6. Kinetic model.....	57
7. Catalyst deactivation.....	57
7.1. Deactivation causes.....	58
7.2. Model of the deactivation	58
7.2.1. Hypothesis of the independence of the deactivation and of the reaction	58
7.2.2. Fouling kinetic.....	59
7.3. Do not miss the deactivation.....	61
8. Determination of the kinetic constants	63
8.1. Linearisation method	63
8.2. Non-linear adjustment techniques	63
9. Interpretations of kinetic constant values	63
10. Detailed mechanism and site simulation.....	65
11. Conclusions	65

LECTURE 4

Electronic Structure of Metals and Alloys: from Bulk to Surfaces and Clusters

by G. Tréglia

1. Introduction	67
2. Bulk electronic structure	68
2.1. Pure metals.....	68
2.1.1. One electron approximation (<i>ab initio</i> methods).....	68
2.1.1.1. Hartree(-Fock) approximation.....	68
2.1.1.2. Local density functional approximation (LDA)....	70
2.1.2. Normal metals (jellium, pseudopotentials).....	71
2.1.3. Transition metals (tight-binding approximation)	72
2.1.4. Energetics and structure	76
2.1.4.1. Normal metals	76
2.1.4.2. Transition metals	78
2.2. Alloy A_cB_{1-c}	81
2.2.1. Electronic structure	81
2.2.2. Mixing energy	83
3. Electronic structure of surfaces.....	85
3.1. Pure metals.....	85
3.1.1. Electronic structure	85
3.1.1.1. Normal metals: surface states	85
3.1.1.2. Transition metals	85
3.1.2. Surface energy.....	89
3.1.2.1. Normal metals	89
3.1.2.2. Transition metals	89
3.1.3. Atomic structure (transition metals).....	90
3.1.3.1. Surface relaxation.....	90
3.1.3.2. Surface reconstruction.....	91
3.2. Bimetallic systems	92
3.2.1. Alloy surfaces: A_cB_{1-c}	92
3.2.2. Surface alloy: A/B	95
3.2.3. Atomic superstructure	95
3.2.4. Local order and densities of states.....	96
4. Electronic structure of clusters	96

	XI
4.1. Pure metals.....	96
4.1.1. Electronic structure	96
4.1.2. Atomic structure	97
4.2. Bimetallic systems	98
4.2.1. Finite size effect on surface segregation	98
4.2.2. Local densities of states and preferential sites.....	100

LECTURE 5

Étude des adsorbats moléculaires sur surface métallique par spectroscopies de photoémission et d'absorption X

by G. Tourillon

1. Spectroscopie de photoémission XPS et UPS.....	104
2. Spectroscopie d'absorption X-NEXAFS	105
3. Spectroscopie de déexcitation (Auger résonant et Raman résonant)	111

LECTURE 6

Catalysis by Metals: Contribution of Electrochemistry

by J. Barbier, M.J. Chollier and F. Epron

1. Preparation of bimetallic catalysts by surface electrochemical reactions	113
1.1. Direct redox reactions in the preparation of bimetallic catalysts	113
1.2. Redox reactions of adsorbed species in the preparation of bimetallic catalysts (« Recharge method »)	115
1.3. Catalytic reduction in the preparation of bimetallic catalysts	115
1.4. Underpotential deposition	116
1.5. Concluding remarks	117
2. Characterization of metallic catalysts by the means of electrochemical methods	117
2.1. Determination of metallic surface area by cyclic voltammetry	119

2.2. Thermodynamic study of the adsorption of different compounds by cyclic voltammetry	119
2.2.1. Thermodynamic study of hydrogen adsorption on platinum	119
2.2.2. Thermodynamic study of sulphur adsorption on platinum....	122
2.2.3. Thermodynamic study of maleic acid adsorption	124
2.3. Electrochemical potential of the catalyst during hydrogenation reactions in liquid phase	126
2.4. Concluding remarks	129

LECTURE 7

Catalysis and Automotive Pollution Control

by J. Barbier, C. Micheaud, E. Rohart and E. Lafitte

1. Introduction	133
2. General aspects	134
3. Catalytic combustion	135
3.1. Catalytic oxidation of carbon monoxide.....	135
3.1.1. Adsorption of carbon monoxide.....	135
3.1.2. Adsorption of oxygen.....	137
3.1.3. Experimental approach of catalytic oxidation of CO	138
3.2. Catalytic oxidation of hydrocarbons (HC).....	139
3.2.1. Alkane oxidation	139
3.2.2. Alkene oxidation	140
4. Role of water in the CO and unburnt hydrocarbons combustion.....	141
4.1. Water gas shift reaction	142
4.2. Hydrocarbon steamreforming reaction	143
5. NO _x reduction	143
5.1. Conversion of NO _x in Three-Way Catalysts (TWC)	143
5.1.1. Reduction of NO by CO.....	143
5.1.2. Reduction of NO by H ₂	145
5.1.3. Reduction of NO by unburnt hydrocarbons	145
5.2. Reduction of NO _x under lean operating conditions - Application to the diesel engine	146
5.2.1. General aspects.....	146
5.2.2. Fundamental approach	148
6. Concluding remarks.....	150

LECTURE 8

Chemisorption Bonds at Transition Metal Surfaces: Orbital Approach

by D. Simon

1. Introduction	153
2. The concepts	153
2.1. Definition of local density of states	153
2.2. Electron population and transfer	156
2.3. Mean energy	156
2.4. Overlap population	156
2.5. Atomic properties	157
3. Illustration of the concepts	157
4. Interaction diagrams	161
5. Conclusion	164

LECTURE 9

Characterization of Metallic Catalysts by X-Ray and Electron Microscopy Techniques

by G. Bergeret

1. Definitions and generalities	167
1.1. Particle size: mean diameters	167
1.2. Model particles: total number of atoms and size	168
1.3. Dispersion. Surface area	169
1.4. Coordination number	169
2. X-ray techniques	170
2.1. X-Ray powder Diffraction (XRD)	170
2.1.1. Phase identification	170
2.1.2. Solid solution identification	172
2.1.3. Line Broadening Analysis (LBA)	172
2.2. Small-Angle X-ray Scattering (SAXS)	173

2.3. X-ray absorption spectroscopy: EXAFS and XANES.....	173
2.3.1. Theoretical aspects	174
2.3.2. Application of EXAFS to the study of metal catalysts.....	175
2.3.3. Application of XANES to the study of metal catalysts	175
2.3.4. Conclusions	175
3. Electron microscopy	176
3.1. Preparation of samples.....	176
3.2. The different types of images and their use for the study of metal catalysts.....	176
3.3. Energy Dispersive X-ray emission spectroscopy (EDX).....	177
3.4. Electron Energy Loss Spectroscopy (EELS)	178
3.5. Conclusions.....	178

LECTURE 10

Vibrational Spectroscopy with Neutrons

by H. Jobic

1. Introduction	181
2. Theory.....	182
2.1. Interaction of neutrons with matter.....	182
2.2. Vibrational spectroscopy with neutrons.....	183
3. Experimental.....	185
4. Examples	187
4.1. Hydrogen chemisorption	187
4.1.1. Hydrogen on nickel	187
4.1.2. Hydrogen on ruthenium sulfide.....	190
4.2. Hydroxyl groups in HY zeolite.....	192
4.3. Water in interaction with acidic sites in zeolites.....	196
4.4. Benzene	198
5. Conclusion	199

LECTURE 11

Metal Catalysis in the Conversion of Biosustainable Resources

by P. Gallezot

1. Introduction	201
2. Hydrogenation reactions	203
2.1. Hydrogenation of glucose into sorbitol	203
2.1.1. Hydrogenation on Raney-nickel and supported nickel catalysts	203
2.1.2. Hydrogenation on ruthenium catalysts	205
2.2. Hydrogenation of triglycerides into edible oils and fats	206
2.3. Hydrogenation of fatty esters into fatty alcohols	207
3. Oxidation reactions	208
3.1. Oxidation of glucose to gluconic acid	209
3.2. Oxidation of gluconic acid	211
3.3. Oxidation of 5-hydroxymethylfurfural	211
3.4. Glycerol oxidation	212
3.5. Future of metal catalyzed oxidations	213
4. Concluding remarks	213
