1	Introduction	1
1.1	Motivation	1
1.2	Objectives	2
1.3	Structure of Manuscript	3
2	Current Methods in Statistical Shape Analysis	7
2.1	Shape Modeling in Medical Imaging	7
2.1.1	Shape Analysis	7
2.1.2	Doing Statistics on Shapes	8
2.2	The Correspondence Problem	10
2.2.1	Iterative Closest Point Algorithm	11
2.2.2	Spherical Harmonic Description	13
2.3	Computation of Statistical Shape Models	15
2.3.1	Active Shape Models	16
2.3.2	SSM Based on Minimum Description Length	18
2.4	Segmentation Using Shape Priors	20
2.4.1	Deformable Models	21
2.4.2	Explicitly Represented Shape Priors	23
2.4.3	Implicitly Represented Shape Priors	23
2.5	Discussion	25
3	A Generative Gaussian Mixture Statistical Shape Model	27
3.1	Motivation	27
3.2	Expectation Maximization - ICP Algorithm	29
3.2.1	Algorithm	29
3.2.2	Generalization to Affine Transformation	32
3.2.3	EM-ICP Multi-Scaling	33
3.3	The Unified Framework	37
3.3.1	The Generative Model	37
3.3.2	Optimization of Parameters through a Single MAP Criterion	39
3.4	Computation of the Observation Parameters	42
3.4.1	Transformation	42
3.4.2	Deformation Coefficients	45
3.5	Computation of the Model Parameters	45
3.5.1	Mean Shape	46
3.5.2	Standard Deviation	46
3.5.3	Variation Modes	46
3.6	Practical Aspects	50

3.6.1	Initialization and Control of the Parameters	50
3.6.2	Solving for the Initial Variation Modes	50
3.7	Extension of the Criterion for Non-Convex Structures	52
3.7.1	Integration of Normals	52
3.7.2	Estimating Normals for Unstructured Point Clouds	53
3.8	Discussion	54
4	Evaluation of the GGM-SSM	57
4.1	Performance Measures	57
4.1.1	Assessing SSM Quality	57
4.1.2	Distance Measures	60
4.2	Comparison to an ICP-SSM	61
4.2.1	Synthetic Data	63
4.2.2	Brain Structure MR: Putamen	68
4.3	Comparison to ICP-SSM and MDL-SSM	71
4.4	Unsupervised Classification	76
4.5	Discussion	77
5	Using the GGM-SSM as a Prior for Segmentation	81
5.1	Initialization	81
5.1.1	Distribution Models for Prior Intensity Knowledge	81
5.1.2	Initial Placement Problem	83
5.2	The GGM-SSM in Implicit Function Segmentation	85
5.2.1	Segmentation Using Level Sets	86
5.2.2	MAP Estimation on the Level Sets	87
5.2.3	Derivation of the Energy Functional	90
5.2.4	Optimization of the Energy Functional	92
5.3	Evaluation on Kidney CT Images	93
5.3.1	Segmentation Experiment	94
5.3.2	The Role of the Parameters	97
5.4	Multiple Shape Class Segmentation	100
5.4.1	Development of the Algorithm	101
5.4.2	Experimental Evaluation on Hip Joint CTs	104
5.5	Discussion	112
6	Conclusion	115
6.1	Contributions	115
6.1.1	Model Computation	115
6.1.2	Segmentation	116
6.2	Perspectives	118
6.2.1	Parameters	118
6.2.2	Application	119

6.2.3	Related Work	119
6.2.4	Other	120
A	Mathematical Background	121
A.1	Mathematical Propositions	121
A.2	The ICP as a specific case of the EM-ICP	123
A.3	Mathematical Derivations Chapter 3	123
A.4	Mathematical Derivations Chapter 5	126
A.4.1	Divergence Calculus	126
A.4.2	Helpful Derivations	127
B	List of Publications	129
	Bibliography	131
	Glossary	147
