Abstract

Terminology

List of Acronyms

1	Introduction	1
1.1	Objectives and Challenges	3
1.2	Overview	7
2	State of the Art	9
2.1	Evolution of the Vehicle Network Architecture	9
2.1.1	Introduction of Electronics in the Vehicle	10
2.1.2	Logical Networking of Electronic Systems	11
2.1.3	Introduction of Data Communication Buses	11
2.1.4	Functional Domains and Communication Gateways	13
2.2	The Complexity of the Network Architecture	16
2.2.1	Complexity Drivers	16
2.2.2	The Function-Oriented Approach	17
2.2.3	Standardisation Efforts	18
2.3	Design of the Electronic Network Architecture	21
2.3.1	The Architecture Design Phase in the Development Process	21
2.3.2	Conventional Design Approaches	22
2.3.3	Automated Design Approaches	23
2.4	Automated Design Approaches	23
2.4.1	A Function-Oriented Design Method (Approach 1)	23
2.4.2	Partitioning functions in networked systems (Approach 2)	24
2.4.3	Architecting Automotive Embedded Systems (Approach 3)	24
2.4.4	Model-based design of E/E systems (Approach 4)	26
2.4.5	Comparison of the Presented Approaches and Conclusions	27
2.5	Summary	28
3	A Computer-Based Description	30
3.1	Object-Oriented Approach and Analysis	30

3.1.1	Advantages of a Model-Based Approach.....	30
3.1.2	Choice of the Object-Oriented Approach	31
3.1.3	The Object-Oriented Analysis	31
3.2	Existing Description Models	34
3.2.1	Field Bus Exchange Format.....	34
3.2.2	AUTOSAR System Template.....	35
3.2.3	PREEvision Data Model.....	36
3.2.4	Comparison of the Presented Data Models and Conclusions.....	37
3.3	A Description Model Based on FIBEX.....	38
3.3.1	Application Component Network.....	38
3.3.2	Physical Topology and Communication	39
3.3.3	Network Services	40
3.4	Summary.....	41
4	A New Method for Architecture Design.....	43
4.1	Complexity of the Optimisation Problem	44
4.2	Multi-Objective Optimisation Algorithms.....	46
4.2.1	Overview of Multi-Objective Optimisation Methods.....	47
4.2.2	Approximation of the Pareto Optimal Set.....	48
4.2.3	Multi-Objective Evolutionary Algorithms.....	50
4.3	A New Algorithm for Design Optimisation	54
4.4	Generation of Design Alternatives	58
4.4.1	Encoding of Design Alternatives	59
4.4.2	Generation of the Initial Population	61
4.4.3	Variation Mechanisms.....	62
4.4.4	Handling of Design Constraints.....	64
4.5	Signal Routing and Network Services	66
4.5.1	Signal Routing.....	67
4.5.2	Schedulability of Communication Requirements.....	70
4.5.3	Heuristics for the Deployment of Network Services	74
4.6	Handling of Constraints on Design Objectives	76
4.6.1	Related Works	76
4.6.2	Developed Heuristic	77
4.7	Summary.....	79

5	Evaluation and Decision Process.....	80
5.1	Derivation of Design Constraints and Objectives	80
5.1.1	Design Constraints.....	82
5.1.2	Design Objectives	83
5.2	Quantification of Design Objectives	84
5.2.1	Product Cost efficiency	84
5.2.2	Reliability.....	87
5.2.3	Efficiency of Variants Management.....	92
5.2.4	Testability.....	94
5.2.5	System Extensibility	95
5.2.6	The Combination of Key Figures into Metrics	96
5.3	Decision Making Process.....	96
5.4	Derivation of Priority Vectors.....	98
5.4.1	Derivation of Priority Vectors from Pairwise Comparisons	99
5.4.2	Synthesis of a Group Outcome	101
5.5	Summary.....	102
6	Realisation and Verification	103
6.1	Realisation	103
6.1.1	Description of the Architecture Design & Optimisation Tool.....	104
6.1.2	Input and Output Files.....	108
6.1.3	Optimisation Algorithms	110
6.1.4	Manual Modification of Design Alternatives	112
6.2	Verification	113
6.2.1	Tool Setup and Execution	115
6.2.2	Results and Discussion.....	116
6.3	Summary.....	122
7	Conclusion and Outlook.....	123
7.1	Conclusion and Implications	123
7.2	Outlook.....	125
	List of References	126
	List of Figures.....	132
	List of Tables	135
	Curriculum Vitae.....	136
