

Table of Contents

List of Symbols and Abbreviations	xi
1 Introduction	1
2 Literature Review	4
2.1 Theories for Nonlinear Multicomponent Liquid Chromatography	4
2.1.1 Equilibrium Theory	4
2.1.2 Plate Models	4
2.1.3 Rate Models	5
2.1.3.1 Rate Expressions	5
2.1.3.2 Governing Equation for the Bulk-Fluid Phase	6
2.1.3.3 General Multicomponent Rate Models	6
2.1.3.4 Numerical Solutions	7
2.1.3.5 Solution to the ODE System	7
2.2 Scale-Up of Liquid Chromatography	8
3 A General Multicomponent Rate Model for Column Liquid Chromatography	9
3.1 Model Assumptions	9
3.2 Model Formulation	10
3.3 Finite Element Formulation for the Bulk-Fluid Phase Governing Equation	14
3.4 Orthogonal Collocation Formulation of the Particle Phase Governing Equation	15
3.5 Solution to the ODE System	15
3.6 Fortran 77 Code for the General Multicomponent Rate Model	16
3.7 CPU Time for the Simulation	20
3.8 Extension of the General Multicomponent Rate Model	22
3.8.1 Second Order Kinetics	23
3.8.2 Addition of Size Exclusion Effect to the Rate Model	24
3.9 The Question of Choosing Column Boundary Conditions ..	27

4	Mass Transfer Effects	32
4.1	Effects of Parameters Pe_{Li} , Bi_i and η_i	33
4.2	Effect of Flow Rate	32
4.3	Effect of Mass Transfer in a Case with Unfavorable Isotherm	37
5	Interference Effects in Multicomponent Chromatography ..	39
5.1	Introduction	39
5.2	Computer Simulation and Discussion	40
5.2.1	Displacement Mode	40
5.2.2	Frontal Adsorption Mode	42
5.2.3	Elution Mode	44
5.2.3.1	Adsorption Equilibrium Constants	47
5.2.3.2	Low Adsorption Saturation Capacity	47
5.2.3.3	High Sample Feed Concentration (Concentration Overload)	48
5.2.3.4	Large Sample Size (Volume Overload)	48
5.2.3.5	More Component(s)	50
5.3	Summary	51
6	System Peaks In Multicomponent Elution	52
6.1	Introduction	52
6.2	Boundary Conditions for the General Rate Model	53
6.3	Results and Discussion	53
6.3.1	Modifier is Weaker than Sample Solutes	53
6.3.2	Modifier Affinity is Between those of Sample Solutes	56
6.3.3	Modifier is Stronger than Sample Solutes	58
6.3.4	Effect of Modifier Concentration on System Peak Patterns ..	60
6.3.5	Effect of Modifier on Sample Solutes	62
6.3.6	Effect of Sample Type	64
6.3.7	Effect of Sample Solutes on the Modifier	65
6.3.8	Summary of System Peak Patterns	66
6.3.9	Binary Elution with Two Different Modifiers	68
6.4	Concluding Remarks	68
7	Multicomponent Adsorption with Uneven Saturation Capacities	71
7.1	Introduction	71
7.2	Kinetic and Isotherm Models	72
7.3	Isotherm Crossover	74
7.4	Summary	80
8	Modeling of Affinity Chromatography	81
8.1	Introduction	81
8.2	Effect of Reaction Kinetics	82
8.3	Effect of Size Exclusion	87
8.4	Interaction Between Soluble Ligand and Macromolecule ...	89

8.4.1	Modeling of Reaction in the Fluid	89
8.4.2	Solution Strategy	91
8.5	Modeling of the Three Stages in Affinity Chromatography .	91
8.6	How to Use the Fortran 77 Code AFFINITY.F	93
8.7	Summary	94
9	Modeling of Multicomponent Gradient Elution	95
9.1	Introduction	95
9.2	General Rate Model for Multicomponent Gradient Elution .	96
9.3	Numerical Solution	97
9.4	How to Use the Fortran 77 Code GRADIENT.F	97
9.5	Summary	101
10	Multicomponent Radial Flow Chromatography	102
10.1	Introduction	102
10.2	General Multicomponent Rate Model for RFC	104
10.3	Numerical Solution	106
10.4	How to Use the Fortran 77 Code RATERFC.F	106
10.5	Extensions of the General Multicomponent Rate Model for RFC	108
10.6	Summary	110
11	Scale-Up of Liquid Chromatography using General Rate Models	111
11.1	Isotherms	111
11.1.1	Batch Adsorption Equilibrium Method	111
11.1.2	Column Method	112
11.1.3	Langmuir Isotherm	112
11.1.4	Other Isotherm Models	115
11.2	Mass Transfer Parameters	116
11.3	Evaluation of Pe_p , η_p , and Bi_1	117
11.4	General Procedure for Scale-Up	118
12	References	121
13	Subject Index	125
