

CONTENTS

1 STRESS AND STRAIN IN ROCKS

1.1	Mechanical forces and stresses.....	1
1.2	Stresses in porous rocks.....	28
1.3	Strains.....	42

2 THE STRESS CIRCLE

2.1	Derivation.....	60
2.2	The 'pole' of the stress circle.....	67

3 THE BRITTLE REGIME

3.1	'Brittle' vs 'ductile'.....	71
3.2	'Plastic' vs 'viscous' macro-deformation.....	76
3.3	Basic failure modes.....	84
3.4	Faults.....	101

4 THE COULOMB — MOHR THEORY OF FAULTING

4.1	The critical state of stress.....	113
4.2	Coulomb — Mohr's limit condition.....	120
4.3	The orientation of faults.....	131
4.4	The double gliding model.....	139
4.5	Faulting in non-uniform stress fields.....	144
4.6	Multiple fault sets.....	150
4.7	Summary and concluding remarks.....	159

5 PORO - THERMO - ELASTICITY OF ROCKS

5.1	Linearly elastic stress-strain relationships.....	164
5.2	Changes in fluid pressure.....	176
	1. Regional uplifting of sediments.....	176
	2. Residual stresses.....	188
	3. Hydraulic fractures.....	193
	4. Stresses induced by fluid extraction from reservoirs.....	210

6 FAULT STRUCTURES

6.1	Incipient faulting in layered rocks.....	215
6.2	Curvature of faults.....	232
6.3	Antithetic faults.....	265
6.4	The 'bookshelf'-type accommodation of 'simple shear'.....	274
6.5	The stress paradox of the San Andreas fault.....	293

7 SLIP, REACTIVATION AND TERMINATION OF FAULTS

7.1	Displacement variations along faults.....	298
7.2	Stresses in tip regions and termination of faults.....	305
7.3	Oblique slip on planes of weakness.....	318
7.4	Aspects of fault inversion.....	338
7.5	Shear joints vs faults.....	357

8 PARALLEL FAULTS

8.1	Parallel faulting accommodating extension	376
8.2	Echelon patterns of parallel faults.....	395

9. MODELLING OF FAULTING — SCALING PROBLEMS

9.1	Geometrical similarity	407
9.2	Dynamical similarity — scaling rules	412
