List of Acronyms	vii
List of Symbols	ix
Acknowledgments	xvii
Zusammenfassung	xix
Abstract	xxiii
1 Introduction	1
1.1 Motivation	1
1.2 Problem Description	3
1.2.1 LISA Mission	4
1.2.2 Sensitivity Degradation through Tilt-to-Length Coupling	5
1.3 State of the Art	6
1.3.1 Ground-based and Spaceborne Gravitational-Wave Detectors	6
1.3.2 Tilt-to-Length Coupling Mechanisms and Sources	9
1.3.3 Calibration Procedures and Noise Reduction Algorithms	11
1.4 Solution Approach	15
1.5 Research Contributions	17
1.6 Structure of the Thesis	18
2 Analytical Tilt-to-Length Noise Propagation Model	21
2.1 Interferometric Measurement Model	21
2.1.1 Active Transponder Principle and Strap-Down Architecture	21
2.1.2 Phasemeter Equations	22
2.2 Linear Tilt-to-Length Coupling Model	26
2.2.1 Extension of Phasemeter Equations by Tilt-to-Length Coupling	26
2.2.2 Tilt-to-Length Coupling Factors	28
2.3 LISA Noise Reduction Pipeline	32
2.3.1 Full Removal Algorithm	32

2.3.2	Second-Generation Time-Delay Interferometry Algorithm	36
2.4	Tilt-to-Length Noise in LISA's Science Data	37
2.4.1	Propagation Behavior of Individual Tilt-to-Length Noise Contributions	38
2.4.2	Total Tilt-to-Length Noise Contribution in Time-Delay Interferometry Michelson Variables	41
2.5	Inverse Problem of Tilt-to-Length Coupling Determination . . .	42
2.5.1	Mathematical Formulation	43
2.5.2	Optimal On-Orbit Excitation	44
3	Tilt-to-Length Noise Estimation and Calibration Design	51
3.1	Estimator Selection and Application	51
3.1.1	Least-Squares Tilt-to-Length Estimator	51
3.1.2	Attenuation Bias	53
3.1.3	Methodology for Statistical Performance Evaluation . . .	53
3.1.4	Estimation Results with the Open-Loop LISA Simulator .	56
3.2	Analytical Tilt-to-Length Noise Residuals	57
3.2.1	Tilt-to-Length Coupling Noise Calibration and Compensation	57
3.2.2	Tilt-to-Length Factor Knowledge Requirement	62
3.2.3	Selection of Tilt-to-Length Noise Calibration Parameters	63
4	Separation Principle of Time-Delay Interferometry Observables	65
4.1	LISA Time Response to Gravitational Waves	65
4.1.1	Gravitational-Wave Modeling	65
4.1.2	Tilt-to-Length Noise Estimation Strategies during Gravitational-Wave Events	67
4.2	Derivation of Spacecraft Maneuver Relations	68
4.3	Impact of Maneuver Relation Errors on Science Signals	72
4.3.1	Derivation of the Maximum Maneuver Relation Error . .	72
4.3.2	Closed-Loop Plant Uncertainty Induced Maneuver Relation Error	74
4.4	Test Signal Design	76
4.4.1	Optimization Approach	76
4.4.2	Optimal Spacecraft Calibration Maneuvers	79
4.5	Tilt-to-Length Noise Estimation During Gravitational-Wave Events	81
4.5.1	Gravitational-Wave Environment	81
4.5.2	Estimation Results with the Open-Loop LISA Simulator .	83

5	Alternative Algorithm for Tilt-to-Length Noise Reduction	89
5.1	Concept of Time-Delay Interferometry Infinity	89
5.1.1	Implicit Formulation of Time-Delay Interferometry Infinity	90
5.1.2	Derivation of the Extended Design and Infinity Matrices .	92
5.2	Verification of Concept Extension	93
5.3	Noise Transfer Functions	95
5.4	Time-Delay Interferometry Infinity Based Estimator Design . . .	98
5.5	Performance Comparison with Time-Delay Interferometry Sec- ond Generation	101
5.5.1	Residual Spacecraft Jitter Based Estimation	101
5.5.2	Estimation with Modified Time-Delay Interferometry Sep- aration	102
6	Calibration of Common-Mode Delay Noise via Time-Delay Inter- ferometry Ranging	105
6.1	Modeling of Common-Mode Delays in LISA's Interferometer Mea- surements	105
6.1.1	Extension of Phasemeter Equations by Common-Mode Delays	106
6.1.2	Analytical Assessment of Residual Laser Noise in Time- Delay Interferometry Michelson Combinations	108
6.1.3	Derivation of Common-Mode Delay Estimation Require- ments	110
6.2	Time-Delay Interferometry Ranging Based Estimation Design . .	113
6.2.1	Classical Time-Delay Interferometry Ranging	113
6.2.2	Application of Time-Delay Interferometry Ranging for Common-Mode Delay Estimation	114
6.3	Estimation Results with the Open-Loop LISA Simulator	117
6.3.1	Standard Time-Delay Interferometry Ranging	117
6.3.2	Tone-Assisted Time-Delay Interferometry Ranging	120
7	Optimal Tilt-to-Length Noise Estimation Windows	123
7.1	Point-Ahead Angle Mechanism and Tilt-to-Length Coupling . . .	123
7.2	Temporal Point-Ahead Angle Variations in LISA	124
7.2.1	Derivation of In-Plane and Out-of-Plane Point-Ahead An- gles	125
7.2.2	LISA Orbit and Numerical Simulation	127
7.3	Optimal Point-Ahead Angle Control	128
7.3.1	Continuous and Discrete Point-Ahead Angle Adjustment	128

Contents

7.3.2	Strategies for Discrete Point-Ahead Angle Control	130
8	Verification of Tilt-to-Length Noise Estimation Results	139
8.1	Closed-Loop Airbus End-to-End Performance Simulator	139
8.2	Simulator Verification	140
8.2.1	Verification of Doppler Shifts in LISA's Laser Links . . .	140
8.2.2	Verification of the Time-Delay Interferometry Performance	141
8.3	Verification of Tilt-to-Length Factor Estimation Accuracies . . .	142
9	Conclusion	151
A	Delay Notation for Time-Delay Interferometry Second Generation	157
B	Equations for the Tilt-to-Length Noise Propagation Model	159
C	Open-Loop LISA Simulator	165
C.1	Generation of Interferometric and Auxiliary Data	165
C.2	Data Processing	170
	Bibliography	171
	Curriculum Vitae	187
