Preface	v
1 Three-Dimensional Topology	1
1.1 Basic definitions and facts	1
1.2 Incompressible surfaces	3
1.3 Existence of incompressible surfaces	7
1.4 Homeomorphisms of Haken manifolds	9
1.5 Pared 3-manifolds	10
1.6 Seifert manifolds	11
1.7 The decomposition theorem	12
1.8 Characteristic submanifolds	14
1.9 3-manifolds fibered over $\mathbb{S}^1$	16
1.10 Baumslag–Solitar relations	18
2 Thurston Norm	23
2.1 Norms defined over $\mathbb{Z}$	23
2.2 Variation of fiber-bundle structure	25
2.3 Application to incompressible surfaces	26
3 Geometry of Hyperbolic Space	31
3.1 General definitions and notation	31
3.2 $CAT(\lambda)$ -spaces	32
3.3 Basic properties of hyperbolic space	36
3.4 Models of hyperbolic space	39
3.5 Isometries of hyperbolic space	41

3.6	The convergence property	43
3.7	Convex polyhedra in hyperbolic space	46
3.8	Cayley graphs of finitely generated groups	47
3.9	Quasiisometries	48
3.10	Quasiconformal mappings	53
3.11	Distortion of distance by quasiconformal maps	55
3.12	Harmonic functions on hyperbolic space	56
4	Kleinian Groups	57
4.1	Nilpotent groups	57
4.2	Residual finiteness and the Selberg lemma	59
4.3	Representation varieties	60
4.4	Cohomology of groups and sheaves	65
4.5	Group cohomology and representation varieties	69
4.6	Basics of discrete groups	72
4.7	Properties of limit sets	76
4.8	Quotient spaces of discrete groups	76
4.9	Conical and parabolic limit points	77
4.10	Fundamental domains	78
4.11	Poincaré theorem on fundamental polyhedra	80
4.12	The Kazhdan–Margulis–Zassenhaus theorem	84
4.13	Geometry of Margulis tubes and cusps	87
4.14	Geometrically finite groups	92
4.15	Criteria of geometric finiteness	93
4.16	Kleinian groups and Riemann surfaces	95
4.17	The convex hull and domain of discontinuity	98
4.18	Combination theorems	102
4.19	Ahlfors finiteness theorem	110
4.20	Extensions of the Ahlfors finiteness theorem	112
4.21	Limit sets of geometrically finite groups	115
4.22	Groups with Kleinian subgroups	116
4.23	Ends of hyperbolic manifolds	116
5	Teichmüller Theory of Riemann Surfaces	119
5.1	Tensor calculus on Riemann surfaces	119
5.2	Properties of quasiconformal maps	122
5.3	Geometry of quadratic differentials	124
5.4	Teichmüller spaces of Riemann surfaces	125
5.5	The Weil–Petersson metric on $\mathcal{T}(S)$	131
5.6	Torsion in Mod_S	131
6	Introduction to Orbifold Theory	135
6.1	Definitions and examples	135

6.2	Two-dimensional orbifolds	141
6.3	Three-dimensional locally reflective orbifolds	144
6.4	Glossary of orbifolds: The good, the bad, and	147
6.5	A homeomorphism theorem for 3-orbifolds	154
7	Complex Projective Structures	161
7.1	Basic definitions	161
7.2	Grafting	166
8	Sociology of Kleinian Groups	169
8.1	Algebraic convergence of representations	169
8.2	Geometric convergence	171
8.3	Isomorphisms of geometrically finite groups	175
8.4	The Douady–Earle extension	178
8.5	The Mostow rigidity theorem	186
8.6	The Sullivan rigidity theorem	189
8.7	Bers isomorphism	190
8.8	Smoothness of representation varieties	193
8.9	Applications to quasiconformal stability	201
8.10	The Calabi–Weil infinitesimal rigidity theorem	203
8.11	Space of quasi-Fuchsian representations	204
8.12	Distortion of the translation length	205
8.13	Proof of the recurrence theorem	205
8.14	Proof of the Ahlfors finiteness theorem	206
8.15	A generalization of the Bers isomorphism	211
8.16	Totally degenerate groups	212
8.17	Algebraic topology versus geometric topology	214
8.18	Justification of the Poincaré continuity method	216
9	Ultralimits of Metric Spaces	219
9.1	Ultrafilters	219
9.2	Ultralimits of metric spaces	220
9.3	The asymptotic cone of a metric space	224
10	Introduction to Group Actions on Trees	227
10.1	Basic definitions and properties	227
10.2	Actions on simplicial trees	232
10.3	Limits of isometric actions on $CAT(0)$ -spaces	236
10.4	Compactification of character varieties	236
10.5	Proper actions	240
11	Laminations, Foliations, and Trees	243
11.1	Euclidean motivation	243
11.2	Geodesic currents	245

11.3	Measured foliations on hyperbolic surfaces	246
11.4	Interval exchange transformations	253
11.5	Train tracks	254
11.6	Measured geodesic laminations	255
11.7	Topology on measured laminations	262
11.8	From foliations to laminations	263
11.9	From laminations to foliations	264
11.10	Action of Mod_S on geodesic laminations	266
11.11	The geometric intersection number	266
11.12	From laminations to trees	267
11.13	An application of Skora's theorem	269
11.14	Characterization of aperiodic homeomorphisms	270
11.15	Dynamics of aperiodic homeomorphisms	274
11.16	Compactification of the Teichmüller space	276
12	Rips Theory	279
12.1	Stable trees	280
12.2	Unions of bands and band complexes	282
12.3	Pushing	285
12.4	Transversal measure on a union of bands	287
12.5	Dynamical decomposition of unions of bands	287
12.6	Band complexes	289
12.7	Holonomy of vertical paths in X	294
12.8	The Kazhdan–Margulis theorem for actions on trees	295
12.9	The moves	299
12.10	Preliminary motions of the Rips machine	304
12.11	The machine	306
12.12	The machine output	313
12.13	Proof of the decomposition theorem	319
12.14	Proof of Skora's duality theorem	321
12.15	Geometric actions on trees	322
12.16	Nongeometric actions on trees	326
12.17	Compactness of representation varieties	329
13	Brooks' Theorem and Circle Packings	333
13.1	Orbifolds and patterns of circles	334
13.2	Brooks' theorem	338
13.3	A packing invariant of patterns of disks	339
13.4	A packing invariant of Kleinian groups	345
13.5	Proof of Brooks' theorem	348
14	Plated Surfaces and Ends of Hyperbolic Manifolds	351
14.1	Singular hyperbolic metrics	351

14.2	Existence theorem for singular pleated maps	354
14.3	Compactness theorem for pleated maps	355
14.4	Geometrically tame ends of hyperbolic manifolds	357
14.5	Ending laminations	361
14.6	Infinite coverings of hyperbolic manifolds	362
14.7	Geometric profile of algebraic convergence	365
15	Outline of the Proof of the Hyperbolization Theorem	369
15.1	Case A: The generic case	372
15.2	Case B: Manifolds fibered over the circle	375
16	Reduction to the Bounded Image Theorem	377
16.1	Step 1: The Maskit combination	377
16.2	Step 2: Formulation of the fixed-point theorem	377
16.3	Step 3: Proof of the contraction theorem	379
16.4	Step 4: End of the proof of the fixed-point theorem	381
17	The Bounded Image Theorem	383
17.1	Limit exists	383
17.2	Geometry of the limit	385
18	Hyperbolization of Fibrations	397
18.1	Compactness theorem for aperiodic homeomorphisms	397
18.2	The Double Limit Theorem: An outline	398
18.3	Proof of Theorem 15.17	400
18.4	An alternative approach	401
19	The Orbifold Trick	403
19.1	Manifold coverings of bipolar orbifolds	403
19.2	Building hyperbolic orbifolds of finite type	404
19.3	Gluing orbifolds of zero Euler characteristic	409
19.4	Hyperbolization of locally reflective orbifolds	411
19.5	Hyperbolic design	412
20	Beyond the Hyperbolization Theorem	417
20.1	Thurston's geometrization conjecture	417
20.2	Other structures	425
20.3	Higher dimensions	428
20.4	Hyperbolic groups	428
