

Contents

I. Analysis in the complex plane	1
0. Notations and basic concepts	1
1. Holomorphic functions	3
2. Real and complex differentiability	7
3. Uniform convergence and power series	13
4. Elementary functions	18
5. Integration	24
6. Several complex variables	32
II. The fundamental theorems of complex analysis	36
1. Primitive functions	36
2. The Cauchy integral theorem	40
3. The Cauchy integral formula	44
4. Power series expansions of holomorphic functions	48
5. Convergence theorems, maximum modulus principle, open mapping theorem	55
6. Isolated singularities and meromorphic functions	61
7. Holomorphic functions of several variables	66
III. Functions on the plane and on the sphere	71
1. The Riemann sphere	71
2. Polynomials and rational functions	75
3. Entire functions	80
4. Möbius transformations	82
5. Logarithms, powers, and roots	87
6. Partial fraction decompositions	95
7. Product Expansions	102
IV. Integral formulas, residues, and applications	108
1. The general Cauchy integral theorem	108
2. The inhomogeneous Cauchy integral formula	117
3. Laurent decomposition and Laurent expansion	119
4. Residues	123
5. Residue calculus	127
6. Counting zeros	137
7. The Weierstrass preparation theorem	141

V. Non-elementary functions	148
1. The Γ -function	148
2. The ζ -function and the Prime Number Theorem	156
3. The functional equation of the ζ -function	167
4. Elliptic functions	174
5. Elliptic functions and plane cubics	188
VI. Meromorphic functions of several variables	193
1. Zero sets of holomorphic functions	193
2. Meromorphic functions	195
3. The inhomogeneous Cauchy-Riemann equation in dimension 1	197
4. The Cauchy-Riemann equations with compact support	199
5. The Cauchy-Riemann equations in a polydisk	201
6. Principal parts: the first Cousin problem	204
7. Divisors: the second Cousin problem	207
8. Meromorphic functions revisited	211
VII. Holomorphic maps: Geometric aspects	214
1. Holomorphic automorphisms	214
2. The hyperbolic metric	218
3. Hyperbolic geometry	224
4. The Riemann mapping theorem	236
5. Harmonic functions	241
6. Schwarz's reflection principle	247
7. The modular map λ	251
8. Theorems of Picard and Montel	255
Hints and solutions of selected exercises	258
Bibliography	263
Index of Symbols	265
Index	266
