

Table of Contents

Foreword	V
Part I. Introduction	
1. Introduction to the SACODY Project	3
<i>J-L. Faillot</i>	
2. Theoretical Aspects of Lightweight Robot Control	8
<i>J. Swevers, D. Torfs, M. Adams, J. De Schutter, H. Van Brussel, H. Thielemans, P. Vanherck</i>	
Part II. A Toolbox for Lightweight Robot Design and Verification	
3. On the Identification of the Dynamic Characteristics of Flexible Robots	41
<i>H. Van der Auweraer</i>	
4. Dynamic Simulation of Multibody Flexible Servomechanisms	76
<i>G. Gallay, J-L. Faillot</i>	
5. CAD/CAE based Methodology for Optimising Robot Mechanical Design	95
<i>B. Duignan, P. Connolly</i>	
6. Sensor Systems for Robot Evaluation	112
<i>H. Van Brussel, F. Demeester, J. Van Den Bossche, P. Vanherck</i>	
Part III. Industrial Application of the SACODY Robot Control	
7. Controller Design for a High-Performance Servo Level	151
<i>H. Wunderlich, H. Walter</i>	
8. Design and Implementation of an Antivibration Robot Control Software	169
<i>J. Deniard, J-L. Faillot, J. Swevers, D. Torfs</i>	
9. Robot Performance Testing	188
<i>H. Wörn, H-R. Tradt, M. Gerung</i>	
Conclusion and Outlook	205
