Preface xvii

Foreword xix

Part I Nucleic Acid Catalysis: Principles, Strategies and Biological Function 1

- 1 The Chemical Principles of RNA Catalysis** 3
Timothy J. Wilson and David M. J. Lilley
 - 1.1 RNA Catalysis 3
 - 1.2 Rates of Chemical Reactions and Transition State Theory 4
 - 1.3 Phosphoryl Transfer Reactions in the Ribozymes 5
 - 1.4 Catalysis of Phosphoryl Transfer 6
 - 1.5 General Acid–Base Catalysis in Nucleolytic Ribozymes 8
 - 1.5.1 The Fraction of Active Catalyst, and the pH Dependence of Reaction Rates 9
 - 1.5.2 The Reactivity of General Acids and Bases 13
 - 1.6 pK_a Shifting of General Acids and Bases in Nucleolytic Ribozymes 13
 - 1.7 Catalytic Roles of Metal Ions in Ribozymes 14
 - 1.8 The Choice Between General Acid–Base Catalysis and the Use of Metal Ions 17
 - 1.9 The Limitations to RNA Catalysis 18
- Acknowledgment 18
- References 19
- 2 Biological Roles of Self-Cleaving Ribozymes** 23
Christina E. Weinberg
 - 2.1 Introduction 23
 - 2.2 Use of Self-cleaving Ribozymes for Replication 25
 - 2.2.1 Viroids 25
 - 2.2.2 Viroid-like Satellite RNAs 28
 - 2.2.3 Hepatitis δ Virus RNA 29
 - 2.2.4 *Neurospora* Varkud Satellite RNAs Replicate Using a DNA Intermediate 29

2.3	Self-cleaving Ribozymes as Part of Transposable Elements	30
2.3.1	R2 Elements: Non-LTR Retrotransposons that Use HDV-like Ribozymes for Retrotransposition	30
2.3.2	HDV-like Ribozymes in Other Non-LTR Retrotransposon Lineages	34
2.3.3	<i>Penelope</i> -like Elements (PLEs) Contain Hammerhead Ribozymes	35
2.3.4	Hammerhead Ribozymes Associated with Repetitive Elements in <i>Schistosoma mansoni</i>	39
2.3.5	Retrozymes: A New Class of Plant Retrotransposons that Contains Hammerhead Ribozymes	40
2.4	Hammerhead Ribozymes with Suggested Roles in mRNA Biogenesis	41
2.5	The <i>glmS</i> Ribozyme Regulates Glucosamine-6-phosphate Levels in Bacteria	41
2.6	The Biological Roles of Many Ribozymes Are Unknown	42
2.7	Conclusion	43
	Acknowledgments	43
	References	44

Part II Naturally Occurring Ribozymes 55

3	Chemical Mechanisms of the Nucleolytic Ribozymes	57
	<i>Timothy J. Wilson and David M. J. Lilley</i>	
3.1	The Nucleolytic Ribozymes	57
3.2	Some Nucleolytic Ribozymes Are Widespread	58
3.3	Secondary Structures of Nucleolytic Ribozymes – Junctions and Pseudoknots	58
3.4	Catalytic Players in the Nucleolytic Ribozymes	60
3.5	The Hairpin and VS Ribozymes: The G Plus A Mechanism	61
3.6	The Twister Ribozyme: A G Plus A Variant	66
3.7	The Hammerhead Ribozyme: A 2'-Hydroxyl as a Catalytic Participant	69
3.8	The Hepatitis Delta Virus Ribozyme: A Direct Role for a Metal Ion	72
3.9	The Twister Sister (TS) Ribozyme: Another Metallo-Ribozyme	74
3.10	The Pistol Ribozyme: A Metal Ion as the General Acid	76
3.11	The <i>glmS</i> Ribozyme: Participation of a Coenzyme	78
3.12	A Classification of the Nucleolytic Ribozymes Based on Catalytic Mechanism	79
	Acknowledgments	83
	References	83
4	The <i>glmS</i> Ribozyme and Its Multifunctional Coenzyme Glucosamine-6-phosphate	91
	<i>Juliane Soukup</i>	
4.1	Introduction	91
4.2	Ribozymes	91

4.3	Riboswitches	92
4.4	The <i>glmS</i> Riboswitch/Ribozyme	93
4.5	Biological Function of the <i>glmS</i> Ribozyme	94
4.6	<i>glmS</i> Ribozyme Structure and Function – Initial Biochemical Analyses	95
4.7	<i>glmS</i> Ribozyme Structure and Function – Initial Crystallographic Analysis	98
4.8	Metal Ion Usage by the <i>glmS</i> Ribozyme	99
4.9	In Vitro Selected <i>glmS</i> Catalyst Loses Coenzyme Dependence	101
4.10	Essential Coenzyme GlcN6P Functional Groups	102
4.11	Mechanism of <i>glmS</i> Ribozyme Self-Cleavage	104
4.11.1	Importance of Coenzyme GlcN6P	104
4.11.2	pH-Reactivity Profiles	106
4.11.3	Role of an Active Site Guanine	108
4.12	Potential for Antibiotic Development Affecting <i>glmS</i> Ribozyme/Riboswitch Function	109
	Acknowledgments	110
	References	110
5	The Lariat Capping Ribozyme	117
	<i>Henrik Nielsen, Nicolai Krogh, Benoît Masquida, and Steinar Daae Johansen</i>	
5.1	Introduction	117
5.1.1	The Basics	117
5.1.2	A Brief Account of the Discovery of the Lariat Capping Ribozyme	119
5.1.3	Readers Guide to Nomenclature	120
5.1.4	The Species Involved	120
5.2	Reactions Catalyzed by LCrz	121
5.2.1	The Branching Reaction	122
5.2.2	Ligation and Hydrolysis	122
5.2.3	Reaction Conditions	124
5.3	The Structure of the LCrz Core	125
5.3.1	The Detailed Structure of <i>Dir</i> LCrz	125
5.3.2	Structure of the <i>Naegleria</i> -type LCrz	126
5.4	Communication Between LCrz and Flanking Elements	128
5.4.1	Group I Ribozyme Switching	128
5.4.2	LC Ribozyme Switching	130
5.4.3	A Role of Spliceosomal Intron I51 in <i>Dir</i> LCrz Regulation?	131
5.5	Reflections on the Evolutionary Aspect of LCrz	131
5.5.1	A Model for the Emergence of LCrz	132
5.5.2	An Evolutionary Path to Spliceosomal Splicing?	132
5.6	LCrz as a Research Tool	134
5.7	Conclusions and Unsolved Problems	136
	References	138

6	Self-Splicing Group II Introns	143
	<i>Isabel Chillón and Marco Marcia</i>	
6.1	Introduction	143
6.2	Milestones in the Characterization of Group II Introns	143
6.3	Evolutionary Conservation and Biological Role	145
6.3.1	Phylogenetic Classifications	145
6.3.2	Differentiation and Evolutionarily Acquired Properties	148
6.3.3	Spreading and Survival in the Host Genome	149
6.4	Structural Architecture	152
6.4.1	Secondary Structure and Long-Range Tertiary Interactions	152
6.4.2	Folding	153
6.4.3	Stabilization by Solvent and IEP	154
6.4.4	Active Site and Reaction Mechanism	154
6.5	Lessons and Tools from Group II Intron Research	156
6.5.1	Analogies to Other Splicing Machineries	156
6.5.2	Lessons to Study Other Large Non-coding RNAs	157
6.5.3	Biotechnological Applications of GIIi	157
6.6	Perspectives and Open Questions	158
	Acknowledgments	158
	References	158
7	The Spliceosome: an RNA–Protein Ribozyme Derived From Ancient Mobile Genetic Elements	169
	<i>Erin L. Garside, Oliver A. Kent, and Andrew M. MacMillan</i>	
7.1	Discovery of Introns and Splicing	169
7.2	snRNPs and the Spliceosome	170
7.3	The Spliceosomal Cycle	171
7.4	Chemistry of Splicing	173
7.5	Spliceosome Structural Analysis	177
7.6	Spliceosome Structures	177
7.6.1	Pre-spliceosome: Tri-snRNP	177
7.6.2	Pre-spliceosome: A Complex	179
7.6.3	B Complex	179
7.6.4	Activated B Complex	182
7.6.5	C and C* Complexes	183
7.6.6	P Complex	185
7.6.7	Intron Lariat Spliceosome Complex	185
7.7	Insights from Spliceosome Disassembly	187
7.8	Conservation of Spliceosomal and Group II Active Sites	187
7.9	Summary and Perspectives	188
	References	189
8	The Ribosome and Protein Synthesis	193
	<i>Paul Huter, Michael Graf, and Daniel N. Wilson</i>	
8.1	Central Dogma of Molecular Biology	193

8.2	Structure of the <i>E. coli</i> Ribosome	194
8.3	Translation Cycle	194
8.3.1	Initiation	196
8.3.2	Elongation	199
8.3.3	Termination	208
8.3.4	Recycling	211
	References	213
9	The RNase P Ribozyme	227
	<i>Markus Gößringer, Isabell Schencking, and Roland Karl Hartmann</i>	
9.1	Introduction	227
9.2	Bacterial RNase P	229
9.2.1	P RNA Structure and Evolution	229
9.2.2	The Single Protein Subunit	233
9.2.3	P RNAs – Architectural Principles, Variations, Idiosyncrasies	233
9.3	Substrate Interaction	235
9.4	RNA-based Metal Ion Catalysis	247
9.4.1	The Two-metal Ion Mechanism	247
9.4.2	Architecture of the Active Site	250
9.4.3	The “A248/nt –1” Interaction	251
9.4.4	Specific RNase P Cleavage by the P15 Module	253
9.5	RNase P as an Antibiotic Target	254
9.5.1	P RNA as a Target	254
9.5.2	The Bacterial RNase P Holoenzyme as Target	257
9.5.3	P Protein as a Target	258
9.6	Application of RNase P as a Tool in Gene Inactivation	258
9.6.1	The Guide Sequence (GS) Concept	258
9.6.2	EGS Technology in Eukaryotic Cells	259
9.6.3	EGS Oligonucleotides and Recruitment of Human Nuclear-Cytoplasmic RNase P	261
9.6.4	The M1–GS Approach	265
9.6.5	Outlook	266
	References	267
