

TABLE OF CONTENTS

Introduction	IX
Combinators and classes - D. Scott	1
Least fixed points revisited - J.W. de Bakker	27
Infinite normal forms for the λ -calculus - R. Nakajima	62
A survey of some useful partial order relations on terms of the lambda calculus - J.M.E. Hyland	83
λ -terms as total or partial functions on normal forms - C. Böhm, M. Dezani-Ciancaglini	96
Continuous semantics and inside-out reductions - P.H. Welch	122
An algebraic interpretation of the $\lambda\beta K$ -calculus and a labelled λ -calculus - J.-J. Levy	147
Les modèles informatiques des λ -calculs - L. Nolin	166
On the description of time varying systems in λ -calculus - G. Ausiello	177
Unification in typed lambda calculus - G. Huet	192
A condition for identifying two elements of whatever model of combinatory logic - G. Jacopini	213
Typed meaning in Scott's λ -calculus models - H. Egli	220
Programming language semantics in a typed lambda-calculus - L. Aiello, M. Aiello	240
Big trees in a λ -calculus with λ -expressions as types - R. de Vrijer	252
Normed uniformly reflexive structures - H. Barendregt	272
A model with nondeterministic computation - M. Venturini Zilli	287
On subrecursiveness in weak combinatory logic - C. Batini, A. Pettorossi	297
Sequentially and parallelly computable functionals - V. Yu. Sazonov	312

Computation on arbitrary algebras -	
A. Dubinsky	319
On solvability by λI -terms	
J.W. Klop	342
Some philosophical issues concerning theories of combinators -	
D. Scott	346
Open problems	367
