|--------------------------------------------------------------------------|---|
| History and Basic Characteristics of Eruptive Flares (Introductory Talk) |   |
| <i>Z. Švestka and E.W. Cliver</i> .....                                  | 1 |

### 1. Preflare Situation and Flare Onset

|                                                                                                                           |    |
|---------------------------------------------------------------------------------------------------------------------------|----|
| Basic Magnetic Configuration and Energy Supply Processes for an Interacting Flux Model of Eruptive Solar Flares (Invited) |    |
| <i>E.R. Priest</i> .....                                                                                                  | 15 |
| The Role of Cancelling Magnetic Fields in the Buildup to Erupting Filaments and Flares (Invited)                          |    |
| <i>S.F. Martin and S.H.B. Livi</i> .....                                                                                  | 33 |
| Variation of the Vector Magnetic Field in an Eruptive Flare (Invited)                                                     |    |
| <i>D.M. Rust and G. Cauzzi</i> .....                                                                                      | 46 |
| Intrinsically Hot Flares and a Possible Connection to Deep Convective Magnetic Fields (Extended Abstract)                 |    |
| <i>H.A. Garcia and P.S. McIntosh</i> .....                                                                                | 53 |
| Interaction of Large-Scale Magnetic Structures in Solar Flares (Extended Abstract)                                        |    |
| <i>C.H. Mandrini, P. Démoulin, and J.C. Hénouz</i> .....                                                                  | 54 |
| The Intrinsic Relationship between Flares and Eruption of Filament Currents                                               |    |
| <i>S.T. Wu and Ao Ao Xu</i> .....                                                                                         | 55 |
| Filament Eruptions, Flaring Arches and Eruptive Flares (Invited)                                                          |    |
| <i>A. Bhatnagar, A. Ambastha, and N. Srivastava</i> .....                                                                 | 59 |
| MHD Non-Equilibrium: A Numerical Experiment                                                                               |    |
| <i>P. Martens, M.T. Sun, and S.T. Wu</i> .....                                                                            | 65 |
| Triggering of Eruptive Flares: Destabilization of the Preflare Magnetic Field Configuration (Invited)                     |    |
| <i>R.L. Moore and G. Roumeliotis</i> .....                                                                                | 69 |
| Field Opening and Reconnection (Invited)                                                                                  |    |
| <i>T.G. Forbes</i> .....                                                                                                  | 79 |
| Energy Release at Alfvénic Fronts in a Force-Free Magnetic Flux Tube                                                      |    |
| <i>J. Nicholls</i> .....                                                                                                  | 89 |

### 2. Flare Development

|                                                                                                   |     |
|---------------------------------------------------------------------------------------------------|-----|
| Energy Transport in Solar Flares: Implications for Ca XIX Emission (Invited)                      |     |
| <i>D.M. Zarro</i> .....                                                                           | 95  |
| Fluid Flow in a Jet and the Ca XIX Line Profiles Observed during Solar Flares (Extended Abstract) |     |
| <i>P.L. Bornmann and J.R. Lemen</i> .....                                                         | 105 |
| Characteristics of the Impulsive Phase of Flares (Invited)                                        |     |
| <i>A.O. Benz and M.J. Aschwanden</i> .....                                                        | 106 |

|                                                                                                       |     |
|-------------------------------------------------------------------------------------------------------|-----|
| Comparison of UV and X-Ray Solar Flare Observations and Theoretical Models<br>(Extended Abstract)     |     |
| <i>J.E. Rodriguez, M.G. Rovira, M.E. Machado, and E.J. Reichmann</i> .....                            | 116 |
| White-Light Flares (Invited)                                                                          |     |
| <i>J.C. Hénoux and J. Aboudarham</i> .....                                                            | 118 |
| 'Post'-Flare Loops (Invited)                                                                          |     |
| <i>B. Schmieder</i> .....                                                                             | 124 |
| Plasma Parameters Derived from MSDP Observations of Cool Flare Loops<br>(Extended Abstract)           |     |
| <i>P. Heinzel, B. Schmieder, and P. Mein</i> .....                                                    | 134 |
| Flare Evolution in the Density – Temperature Diagram                                                  |     |
| <i>S. Serio, F. Reale, G. Peres, J. Jakimiec, B. Sylwester, and J. Sylwester</i> .....                | 135 |
| The Neupert Effect: What Can It Tell Us about the Impulsive and Gradual<br>Phases of Eruptive Flares? |     |
| <i>B.R. Dennis, B.M. Uberall, and D.M. Zarro</i> .....                                                | 139 |

### 3. Particle Acceleration and Radio Response

|                                                                                                                                                       |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Particle Acceleration in the Impulsive Phase of Solar Flares (Invited)                                                                                |     |
| <i>D.B. Melrose</i> .....                                                                                                                             | 147 |
| Kinetic Description of Electron Beams in the Chromosphere                                                                                             |     |
| <i>D. Gómez and P.J.D. Mauas</i> .....                                                                                                                | 157 |
| Nuclear Reactions in Flares (Invited)                                                                                                                 |     |
| <i>E. Rieger</i> .....                                                                                                                                | 161 |
| Radio Emission of Eruptive Flares (Invited)                                                                                                           |     |
| <i>M. Karlický</i> .....                                                                                                                              | 171 |
| Arcsecond Determination of Solar Burst Centers of Emission Simultaneous<br>to High Time Resolution and High Sensitivity at 48 GHz (Extended Abstract) |     |
| <i>J.E.R. Costa, E. Correia, P. Kaufmann, R. Herrmann, and A. Magun</i> .....                                                                         | 177 |
| Trapping and Escape of the High Energy Particles Responsible for Major<br>Proton Events (Invited)                                                     |     |
| <i>D.V. Reames</i> .....                                                                                                                              | 180 |
| Coronal and Interplanetary Transport of Solar Flare Protons from the<br>Ground Level Event of 29 September 1989                                       |     |
| <i>P.H. Stoker</i> .....                                                                                                                              | 186 |
| High-Energetic Solar Proton Flares of 19 to 29 October 1989                                                                                           |     |
| <i>M.A. Mosalam Shaltout</i> .....                                                                                                                    | 190 |

### 4. Flare-Associated Large-Scale Coronal Structures

|                                                                                                          |     |
|----------------------------------------------------------------------------------------------------------|-----|
| Large-Scale Quasi-Stationary X-Ray Coronal Structures Associated with<br>Eruptive Solar Flares (Invited) |     |
| <i>R.A. Kopp and G. Poletto</i> .....                                                                    | 197 |
| Large-Scale Structures Associated with Eruptive Flares and Radio Waves<br>(Invited)                      |     |
| <i>N. Gopalswamy and M.R. Kundu</i> .....                                                                | 207 |

## Coronal Millimeter Sources Associated with Eruptive Flares

(Invited)

|                                                                            |     |
|----------------------------------------------------------------------------|-----|
| <i>A. Krüger and S. Urpo</i> .....                                         | 214 |
| On the Association between Large-Scale X-Ray Brightenings and Solar Flares |     |
| <i>C.H. Mandrini and M.E. Machado</i> .....                                | 220 |
| A Giant Post-Flare Coronal Arch Observed by Skylab                         |     |
| <i>Z. Švestka and S. Šimberová</i> .....                                   | 221 |

## 5. Coronal Mass Ejections

### Characteristics of Coronal Mass Ejections (Invited)

|                                                                                            |     |
|--------------------------------------------------------------------------------------------|-----|
| <i>E. Hildner</i> .....                                                                    | 227 |
| The Solar Sources of Coronal Mass Ejections (Invited)                                      |     |
| <i>D.F. Webb</i> .....                                                                     | 234 |
| Remote Sensing Observations of Mass Ejections and Shocks in Interplanetary Space (Invited) |     |
| <i>B.V. Jackson</i> .....                                                                  | 248 |
| <i>In Situ</i> Observations of Coronal Mass Ejections in Interplanetary Space (Invited)    |     |
| <i>J.T. Gosling</i> .....                                                                  | 258 |
| Meter-Decameter Radio Emission Associated with a Coronal Mass Ejection                     |     |
| <i>M.R. Kundu and N. Gopalswamy</i> .....                                                  | 268 |
| Models of Normal and Inverse Polarity Filament Eruptions and Coronal Mass Ejections        |     |
| <i>D.F. Smith, E. Hildner, and R.S. Steinolfson</i> .....                                  | 272 |
| MHD Shocks and Simple Waves in CMEs (Extended Abstract)                                    |     |
| <i>R. S. Steinolfson</i> .....                                                             | 276 |
| Terrestrial Response to Eruptive Solar Flares: Geomagnetic Storms (Invited)                |     |
| <i>W.D. Gonzalez and B.T. Tsurutani</i> .....                                              | 277 |

## 6. Flare Stars

### Stellar Flares: Confined or Eruptive Events? (Invited)

|                                                     |     |
|-----------------------------------------------------|-----|
| <i>R. Pallavicini</i> .....                         | 289 |
| Radio Flare Emission from Late-Type Stars (Invited) |     |
| <i>R.T. Stewart</i> .....                           | 301 |

## 7. Future Projects

### The SOLAR-A Mission Experiments and the Targets

(Summary of an Invited Talk)

|                                                                                                                      |     |
|----------------------------------------------------------------------------------------------------------------------|-----|
| <i>Y. Uchida and Y. Ogawara</i> .....                                                                                | 309 |
| Nobeyama Radioheliograph (Invited)                                                                                   |     |
| <i>S. Enome</i> .....                                                                                                | 314 |
| Decimeter High Resolution Solar Radio Spectroscopy                                                                   |     |
| <i>H.S. Sawant, J.R.A. Sobral, J.A.C.F. Neri, F.C.R. Fernandes, R.R. Rosa, J.R. Cecatto, and D. Martinazzo</i> ..... | 318 |

|                                                                                                                                        |     |
|----------------------------------------------------------------------------------------------------------------------------------------|-----|
| Considerations of a Solar Mass Ejection Imager in a Low Earth Orbit<br><i>B.V. Jackson, D.F. Webb, R.C. Altrock, and R. Gold</i> ..... | 322 |
|----------------------------------------------------------------------------------------------------------------------------------------|-----|

## 8. Poster Papers

|                                                                                                                                                                                                    |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| An Observational-Conceptual Model of the Formation of Filaments<br>(Extended Abstract)<br><i>S.F. Martin</i> .....                                                                                 | 331 |
| Dynamics in the Prominence – Corona Transition Region from HRTS Spectra<br><i>B. Schmieder, K.P. Dere, and J.E. Wiik</i> .....                                                                     | 333 |
| Active Region Classifications, Complexity, and Flare Rates<br><i>P.L. Bornmann and D. Shaw</i> .....                                                                                               | 337 |
| Compact Sources of Suprathermal Microwave Emission Detected in Quiescent<br>Active Regions during Lunar Occultations (Extended Abstract)<br><i>E. Correia, P. Kaufmann, and F.M. Strauss</i> ..... | 341 |
| Velocity Field in the 13 June 1980 Flare Area (Extended Abstract)<br><i>A. Falchi, R. Falciani, and L.A. Smaldone</i> .....                                                                        | 342 |
| Deformation of Magnetic Null Points<br><i>K. Galsgaard and Å. Nordlund</i> .....                                                                                                                   | 343 |
| The X12 Limb Flare and Spray of 01 June 1991<br><i>V. Gaizauskas and C.R. Kerton</i> .....                                                                                                         | 347 |
| Analysis of X-Ray Flares Observed by the SMM Spacecraft<br><i>A.M. Hernández, M.G. Rovira, C.H. Mandrini, and M.E. Machado</i> .....                                                               | 351 |
| Distribution Function for Electron Beams in the Chromosphere<br><i>P.J.D. Mauas and D. Gómez</i> .....                                                                                             | 355 |
| Sub-Second Variations of HXR and H-Alpha Flare Emission<br><i>P. Heinzel and M. Karlický</i> .....                                                                                                 | 359 |
| The Role of Protons in Solar Flares<br><i>D. Heristchi and R. Boyer</i> .....                                                                                                                      | 363 |
| High Spectral Resolution of mm-Wavelength (23-18 GHz) Solar Bursts<br>(Extended Abstract)<br><i>H.S. Sawant, R.R. Rosa, J.R. Cecatto, and F.C.R. Fernandes</i> .....                               | 367 |
| Microwave Flare Characteristics in 8 and 3 mm Metsähovi Measurements<br>Compared with Optical and H-Alpha Data<br><i>S. Pohjolainen, S. Urpo, H. Teräsanta, and M. Tornikoski</i> .....            | 368 |
| Simultaneous H $\alpha$ and Microwave Observations of a Limb Flare on June 20,<br>1989 (Extended Abstract)<br><i>M. Graeter and T.A. Kucera</i> .....                                              | 372 |
| Nonresonant Ion-Beam Turbulence in Solar Flares<br><i>F. Verheest</i> .....                                                                                                                        | 373 |
| Nonlinear Emission Mechanisms of Type III Solar Radio Bursts<br><i>A.C.-L. Chian and F.B. Rizzato</i> .....                                                                                        | 377 |
| A Numerical Simulation of Magnetically Driven Coronal Mass Ejections<br><i>W.P. Guo, J.F. Wang, B.X. Liang, and S.T. Wu</i> .....                                                                  | 381 |
| Coronal Mass Ejections: The Link between Solar and Geomagnetic Activity<br>(Extended Abstract)<br><i>J.T. Gosling, D.J. McComas, and J.L. Phillips</i> .....                                       | 385 |

**A Study of Geomagnetic Variations with Periods of Four Years, Six Months,  
and 27 Days**

*A.L. Chua de Gonzalez, W.D. Gonzalez, S.L.G. Dutra, and B.T. Tsurutani* ..... 386

**Atmospheric Models of Flare Stars**

*P.J.D. Mauas, A. Falchi, and R. Falciani* ..... 390

**Summary of the Colloquium**

**The Emerging Picture of Eruptive Solar Flares**

*P.A. Sturrock* ..... 397
