

# Contents

<b>1</b>	<b>Introduction</b> .....	1
1.1	Motivation .....	2
1.2	Mixtures and Debris Flow Models .....	8
1.3	Mixtures with Frictional Components .....	10
1.4	Objectives, Methods and Structure of the Present Work .....	12
<b>2</b>	<b>Mathematical Preliminaries and Notations</b> .....	15
2.1	Tensors .....	15
2.2	Results from Exterior Calculus .....	18
2.2.1	What is integrability? .....	18
2.2.2	Requirements to be imposed on the 'normal fields' ....	20
2.2.3	On the non-uniqueness of the integrating factors .....	24
<b>3</b>	<b>Introduction to Mixture Theory</b> .....	29
3.1	Basic Principles of Mixture Theory .....	29
3.2	Kinematics of Multi-phase Mixtures .....	33
3.3	Balance Equations and Sum Relations .....	39
<b>4</b>	<b>Constitutive Assumptions</b> .....	55
4.1	Selection of Balance Equations .....	56
4.2	Constitutive Laws of Single-Material Bodies .....	58
4.3	Constitutive Laws in the Context of Mixture Theory .....	60
4.4	A First Attempt to Incorporate Hypo-plasticity .....	65
4.5	Further Assumptions .....	68
4.6	Remarks on the Principle of Objectivity .....	71
<b>5</b>	<b>Entropy Principle, Transformation of the Entropy Inequality</b> .....	75
5.1	Mixture Entropy Principle According to Müller & Liu .....	77
5.2	Mixture Entropy Inequality .....	79

<b>6</b>	<b>Thermodynamic Analysis I</b> .....	91
6.1	LIU Identities and Residual Entropy Inequality .....	91
6.2	Exploiting the Isotropy of the Vector-valued One-form .....	96
6.3	Integrability Conditions .....	111
<b>7</b>	<b>Thermodynamic Analysis II</b> .....	123
7.1	Residual Entropy Inequality in Final Form .....	123
7.2	Mixture Thermodynamic Equilibrium .....	127
7.3	‘Isotropic’ Expansions of Interaction Densities and Extra Entropy Flux .....	137
7.4	Final Representations for $\bar{\mathbf{m}}_\alpha _{\mathbf{E}}$ , $\mathbf{q} _{\mathbf{E}}$ , $\bar{\mathbf{T}}_\alpha _{\mathbf{E}}$ and $\eta _{\mathbf{E}}$ .....	143
<b>8</b>	<b>Reduced Model</b> .....	153
8.1	Physical Assumptions .....	154
8.2	‘Artificial’ Assumptions .....	158
8.3	Final Constitutive Laws .....	182
8.4	An Alternative to the Assumption of ‘Pressure Equilibrium’ .	183
<b>9</b>	<b>Discussions and Conclusions</b> .....	189
<b>A</b>	<b>A Primer on Exterior Calculus</b> .....	197
<b>B</b>	<b>Auxiliary Results</b> .....	221
B.1	Manipulation of the Entropy Inequality .....	221
B.2	Other Auxiliary Results from Section 5.2 .....	225
B.3	Deduction of the LIU Identities .....	227
B.4	Isotropic Representation of the Mixture Flux Density .....	228
B.5	Auxiliary results .....	230
B.6	Derivation of Residual Inequality .....	232
	<b>References</b> .....	237
	<b>Index</b> .....	245
