Preface	v
Introduction	1
1 Vector and tensor fields	7
1.0 Introduction	7
1.1 Coordinate systems in Euclidean space	7
1.2 Suffix notation	13
1.3 Tangents and gradients	19
1.4 Coordinate transformations in Euclidean space	23
1.5 Tensor fields in Euclidean space	28
1.6 Surfaces in Euclidean space	31
1.7 Manifolds	36
1.8 Tensor fields on manifolds	39
1.9 Metric properties	45
1.10 What and where are the bases?	47
Problems 1	51
2 The spacetime of general relativity and paths of particles	55
2.0 Introduction	55
2.1 Geodesics	58
2.2 Parallel vectors along a curve	67
2.3 Absolute and covariant differentiation	73
2.4 Geodesic coordinates	82
2.5 The spacetime of general relativity	84
2.6 Newton's laws of motion	89
2.7 Gravitational potential and the geodesic	90
2.8 Newton's law of universal gravitation	92
2.9 A rotating reference system	93
Problems 2	97
3 Field equations and curvature	99
3.0 Introduction	99

3.1	The stress tensor and fluid motion	99
3.2	The curvature tensor and related tensors	104
3.3	Curvature and parallel transport	107
3.4	Geodesic deviation	113
3.5	Einstein's field equations	114
3.6	Einstein's equation compared with Poisson's equation . . .	117
3.7	The Schwarzschild solution	118
	Problems 3	121
4	Physics in the vicinity of a massive object	124
4.0	Introduction	124
4.1	Length and time	125
4.2	Radar sounding	130
4.3	Spectral shift	132
4.4	General particle motion (including photons)	137
4.5	Perihelion advance	146
4.6	Bending of light	148
4.7	Geodesic effect	151
4.8	Black holes	153
4.9	Other coordinate systems	158
	Problems 4	159
5	Gravitational radiation	161
5.0	Introduction	161
5.1	What wiggles?	162
5.2	Two polarizations	165
5.3	Simple generation and detection	170
	Problems 5	174
6	Elements of cosmology	176
6.0	Introduction	176
6.1	Robertson–Walker line element	178
6.2	Field equations	179
6.3	The Friedmann models	182
6.4	Comment on Einstein's models	185
6.5	Newtonian dust	186
	Problems 6	188
A	Special relativity review	190
A.0	Introduction	190
A.1	Lorentz transformations	192
A.2	Relativistic addition of velocities	195
A.3	Simultaneity	196
A.4	Time dilation, length contraction	197
A.5	Spacetime diagrams	198

A.6	Some standard 4-vectors	201
A.7	Doppler effect	205
A.8	Electromagnetism	207
	Problems A	210
B	The Chinese connection	213
B.0	Background	213
B.1	Lanchester's transporter on a plane	214
B.2	Lanchester's transporter on a surface	217
B.3	A trip at constant latitude	220
	References	221
	Index	225
