About the Author — V

Annotation — VII

Introduction — IX

1	Electromagnetic pulse—a parcel from the past — 1
1.1	Introduction — 1
1.2	History of HEMP — 1
1.3	The issues of theoretical physics — 9
1.4	People's Commissariat for Internal Affairs (NKVD) as the primary “designer” of the first Soviet nuclear explosive — 12
1.5	Thermonuclear bombs — 29
1.6	Nuclear test explosions — 36
1.7	The status of HEMP protection — 53
	Bibliography — 59
2	A contemporary view of HEMP for electrical engineers — 60
2.1	Is the contemporary view up to date? — 60
2.2	The basic physical processes — 60
	Bibliography — 77
3	HEMP simulators — 79
3.1	HEMP simulators: principle of operation — 79
3.2	Classification of HEMP simulators — 81
3.3	Foreign HEMP simulators — 82
3.4	HEMP simulators available in Russia and Ukraine — 88
3.5	Portable HEMP simulators — 93
4	The vulnerability of electronic equipment to HEMP — 95
4.1	Electronic equipment is the most important component of the modern infrastructure — 95
4.2	The vulnerability of discrete electronic components to HEMP — 96
4.3	Vulnerability of integral circuits (microchips) to HEMP — 99
4.4	Vulnerability of microprocessors to HEMP — 104
4.5	Vulnerability of computers to HEMP — 107
4.6	Conclusions — 108
	Bibliography — 109

5	Electronic components for HEMP protection system — 110
5.1	Testing of low-power protective components under the low pulse voltages — 110
5.2	Testing of low-power protective components under the high pulse voltages — 114
5.3	Testing of powerful protective components under conditions close to reality — 118
5.4	Conclusions — 125 Bibliography — 126
6	External protection of power systems' electronic equipment from HEMP — 128
6.1	Introduction — 128
6.2	Analysis of capability of conventional building materials to weaken electromagnetic emission — 128
6.3	Composite construction materials with improved electrical conductivity — 132
6.4	Materials absorbing electromagnetic emission — 138
6.5	Another method for depression of HEMP electromagnetic field strength inside the power industry facilities containing the electronics — 142
6.6	Reducing electronic equipment vulnerability to HEMP with architectural solutions — 145
6.7	Conclusions — 146 Bibliography — 146
7	The issues of electronic equipment grounding at the power facilities — 149
7.1	Types of electromagnetic interference at power facilities — 149
7.2	Challenges of the conventional grounding systems — 150
7.3	Differences between lightning and HEMP — 154
7.4	Grounding of electrical equipment as the main protective means for HEMP — 160
7.5	Protection devices for HEMP — 161
7.6	New method for grounding electronic equipment mounted inside the cabinets — 162 Bibliography — 169
8	The issue of control cables selection for HEMP-protected electric facilities — 171
8.1	Introduction — 171
8.2	Designs and features of shielded control cables — 171
8.3	Evaluation of control-cable shielding effectiveness — 175
8.4	Choosing control cables — 177

8.5	Conclusion — 178
	Bibliography — 178
9	Grounding of control-cable shields — 179
9.1	Introduction — 179
9.2	Shielding principles — 179
9.3	Interference types and grounding options for cable shields — 180
9.4	Problems and contradictions — 181
9.5	Factors impacting the effectiveness of shield groundings — 182
9.6	The suggested method of shield grounding — 185
	Bibliography — 187
10	HEMP filters — 189
10.1	Introduction — 189
10.2	Do the filters really protect from an electromagnetic pulse? — 189
10.3	The frequency range of filters — 193
10.4	Feasibility of HEMP equipment protection with filters — 193
10.5	Protection of equipment from HEMP high-frequency noise — 195
10.6	Protection of the equipment from the HEMP-generated pulse overvoltage — 196
10.7	Ferrite filters — 197
10.8	Conclusions — 210
	Bibliography — 211
11	High-voltage insulation interfaces — 212
11.1	Introduction — 212
11.2	High-voltage link for transmitting discrete commands in relay protection, automation and control systems — 212
11.3	Usage reed-switch-based high-voltage interfaces in HEMP susceptibility tests — 218
11.4	Design features of high-voltage isolation interfaces — 219
	Bibliography — 221
12	Improvement of the resilience of industrial cabinet-installed electronic equipment to HEMP Impact — 222
12.1	Introduction — 222
12.2	New cabinets for electronic equipment — 222
12.3	Retrofitting existing cabinets equipped with glass doors — 225
12.4	Enhancement of the cabinet cable entries — 228
12.5	Voltage pulse suppression — 233
12.6	Retrofitting grounding systems of electric cabinets — 236
12.7	Conclusion — 237

Bibliography — 237

13 Basic principles of direct-current auxiliary-power system (DCAPS) protection — 238

- 13.1 Introduction — 238
- 13.2 Protection of DCAPS operating equipment from HEMP — 238
- 13.3 Backup-power supplies for DCAPS systems — 240
- 13.4 Mobile substations and features to protect their DCAPS from HEMP — 245
- 13.5 Direct-current auxiliary-power systems of power plants — 251
Bibliography — 252

14 Protection of telecommunication systems in electric power facilities from HEMP — 253

- 14.1 Introduction — 253
- 14.2 Ways to solve the problem — 254
- 14.3 The use of fiber-optic communication lines — 254
- 14.4 Protection telecommunication equipment with galvanic couplings — 255
- 14.5 New devices for protecting existing telecommunication equipment — 260
- 14.6 Protection of the communication cabinets — 263
- 14.7 The general concept for communication-equipment protection — 265
- 14.8 Retrofitting grounding systems of cabinets containing the electronic equipment — 266
- 14.9 Retrofitting open-patch panels — 267
- 14.10 Protection of the power supply system — 267
- 14.11 Retrofitting the facility (room) containing the critical kinds of communication equipment — 267
- 14.12 Conclusion — 268
Bibliography — 268

15 Improvement of HEMP resilience of automatic fire-suppression systems — 269

- 15.1 Introduction — 269
- 15.2 Firefighting systems for power facilities — 269
- 15.3 Improvement of automatic firefighting system's resilience to HEMP — 273
- 15.4 Conclusion — 278
Bibliography — 278

16 Protection of diesel generators from HEMP — 279

- 16.1 Introduction — 279
- 16.2 Increasing resilience of medium- and high-capacity DGs — 279
- 16.3 Protection of DGs stored and de-energized outdoors — 280
- 16.4 Protection of DGs connected to consumer network — 284
- 16.5 Active protection method for diesel-generator controller — 288
- 16.6 Conclusion — 295
- Bibliography — 295

- 17 Features of HEMP resilience-test methods for power system electronics — 296**
 - 17.1 Introduction — 296
 - 17.2 Features of testing equipment on a HEMP simulator — 296
 - 17.3 Test objectives — 297
 - 17.4 Features of the test procedure — 298
 - 17.5 Test modes and test-pulse parameters — 300
 - 17.6 Performance criteria — 302
 - 17.7 Conclusion — 303
 - Bibliography — 304

- 18 Methods and means of evaluation of the effectiveness of HEMP protection of the installed power-system — 305**
 - 18.1 Introduction — 305
 - 18.2 Testing of equipment resilience to direct impact of the HEMP electrical field (E1-component) — 305
 - 18.3 Equipment for HEMP filter testing — 307
 - 18.4 Equipment designed for evaluation of the effectiveness of building, room and cabinet shielding — 311
 - 18.5 Pulse voltage generators — 313
 - 18.6 Conclusion — 315
 - Bibliography — 315

- 19 Features of testing digital protective relays resilience to HEMP — 317**
 - 19.1 Use of performance criterion during the electromagnetic compatibility (EMC) test of electronic equipment — 317
 - 19.2 Features of using performance criterion during the HEMP resilience test of digital protective relays (DPR) — 317
 - 19.3 Criticism of the DPR testing method used — 318
 - 19.4 Analysis of the result of the second independent trial of the same type of DPR — 320
 - 19.5 Analysis of the result of the third independent trial of the same type of DPR — 323
 - 19.6 Conclusions — 331

Bibliography — 332

20 Establishment of inventory of electronic equipment's replacement modules as a way to improve survivability of the power system — 334

- 20.1 Optimization of inventory of electronic equipment replacement modules — **334**
- 20.2 The problem of the traditional mode of SPTA storage — **335**
- 20.3 Requirements for protective containers — **336**
- 20.4 Protective containers available on the market — **337**
- 20.5 Conclusion — **340**
Bibliography — **341**

21 The problem of impact of geomagnetically induced currents on power transformers and it solution — 342

- 21.1 Geomagnetically induced currents generated by solar storms — **342**
- 21.2 Geomagnetically induced currents generated by HEMP — **352**
- 21.3 The effect of the E3 component of HEMP on electric power equipment — **353**
- 21.4 Protection of power equipment from geomagnetically induced currents — **354**
- 21.5 Conclusions — **362**
Bibliography — **363**

A Standards on HEMP — 365

- A.1 Standards of International Electrotechnical Commission (IEC) — **365**
- A.2 Standards of Institute of Electrical and Electronics Engineers (IEEE) — **366**
- A.3 Standards of European Commission — **366**
- A.4 Standards of International Telecommunication Union (ITU) — **366**
- A.5 Military Standards (USA) — **366**
- A.6 NATO Standards — **367**

B EMP and its Impact on Power System (List of Reports) — 369

- B.1 EMP Theory — **369**
- B.2 Geomagnetically Induced Currents and its Impact on Power System — **369**
- B.3 EMP Impact on Power System — **370**

C European Projects related to Protection against HEMP — 375

Index — 377
