Contents

Preface — V

1 Introduction — 1
1.1 Benefits and limitations of single-use technology — 4
1.1.1 Improved process flexibility — 4
1.1.2 Increased speed of implementation — 4
1.1.3 Cost savings — 5
1.1.4 Increased product safety — 5
1.1.5 Technical limitations — 6
1.1.6 Cost increases — 6
1.1.7 Increased complexity — 6
1.1.8 Dependence on suppliers — 7
References — 7

2 Strategies for implementation of single-use technology: A risk- and science-based approach — 9
2.1 A risk- and science-based approach — 11
2.2 Implementation plan — 14
2.3 Risk-assessment tools to support implementation — 17
References — 18

3 Feasibility assessment of single-use technology and suppliers — 19
3.1 Technical feasibility — 19
3.2 Business assessment — 25
3.3 Selection of a supplier of single-use technology — 33
References — 38

4 Specifications and design of single-use technology — 39
4.1 Framework for the design project — 40
4.2 Design choices and risk — 43
4.3 Specification — 47
4.4 Design verification — 49
References — 50

5 Validation — 53
5.1 Qualification of materials and assemblies — 54
5.1.1 Integrity — 57
5.1.2 Compatibiliy — 57
5.1.3 Sterility and cleanliness — 57
5.2 Process qualification — 58

Bibliografische Informationen
http://d-nb.info/1182481620

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

5.2.1 Installation qualification and operational qualification – Water or buffer runs — 60
5.2.2 Process simulation – Media fills — 61
5.2.3 Performance qualification – API stream — 61
5.3 Continuous improvement of processes — 62
References — 63

6 Case studies — 65
6.1 Case study 1: Single-use bag systems — 66
6.1.1 Material selection — 66
6.1.2 Risk assessment for extractables and leachables — 68
6.1.3 Profiles of extractables and leachables — 70
6.1.4 Specification and design — 73
6.1.5 Qualification of final bag assembly — 77
6.2 Case study 2: Single-use bioreactor — 83
6.2.1 Selection of single-use bioreactor technology — 84
6.2.2 Specification and design of single-use bioreactors — 88
6.2.3 Risk assessment of the single-use bioreactor process — 101
6.2.4 Qualification of single-use bioreactors — 101
6.3 Case study 3: Tangential-flow filtration — 104
6.3.1 Selection of technology for tangential-flow filtration — 105
6.3.2 Specification and design — 107
6.3.3 Risk assessment to support design of a system — 115
6.4 Case study 4: Formulation and fill-finish — 124
6.4.1 Selection of fill-finish technology — 125
6.4.2 Risk assessment of fill-finish — 125
6.4.3 Qualification of fill-finish operations — 128
References — 133

Abbreviations — 135

Appendix 1 Scoring Tables — 137

Appendix 2 Risk Rating and Priority Number — 139

Index — 141
