Contents

Preface — V

1 **Water chemistry fundamentals — 1**
1.1 Introduction — **1**
1.2 Solutions — **1**
1.3 The chemical structure of the H_2O molecule — **1**
1.4 Dissolution — **2**
1.5 Solubility — **2**
1.6 Electrolytes and non-electrolytes — **3**
1.7 Expressing solute concentrations in environmental engineering — **4**
1.8 Weight fraction (mass per unit mass) — **5**
1.9 Weight per volume — **5**
1.10 Molarity (M) — **6**
1.11 Normality (N = eq/L) — **6**
1.12 Weight per volume expressed as a different substance (units: g/L as X) — **8**
1.13 The p-notation — **10**
1.14 Chemical equilibrium — **11**
1.15 The kinetic approach for describing chemical equilibrium — **11**
1.16 Adjusting the equilibrium constant to a non-ideal system — **13**
1.17 Acid–base equilibrium in the aqueous phase — **16**
1.18 The thermodynamic approach for describing chemical equilibrium — **19**
1.19 Standard free energy of formation — **21**
1.20 Determining ΔG under non-standard conditions — **22**
1.21 Temperature effect on the equilibrium constant value — **24**

2 **Acids and bases — 27**
2.1 Introduction — **27**
2.2 Basic principles — **27**
2.2.1 Defining acids and bases — **27**
2.3 Acid-base pairs — **29**
2.4 Polyprotic acids — **30**
2.5 The carbonate system — **30**
2.6 The strength of an acid or base — **32**
2.7 The Henderson–Hasselbalch equation — **36**
2.8 Species distribution of weak-acids/bases as a function of pH — **38**
2.8.1 Species concentration as a function of pH – the graphical approach — **42**

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.8.2 Sketching the log (species) curve as a function of pH – a quick procedure — 46
2.8.3 Sketching the log (species) curve as a function of pH – important points — 47
2.9 The effect of a change in the total species concentration, C_T — 48
2.10 Interpreting acid/base systems using proton balance equations — 48
2.11 Equivalent solutions and equivalence points — 54
2.11.1 H_2A_{EP} – the equivalence point of H_2A — 55
2.11.2 HA^-_{EP} – The equivalence point of HA^- — 57
2.11.3 A^{-2}_{EP} – the equivalence point of A^{-2} — 59
2.12 Buffer capacity — 62
2.13 Graphical method for solving problems — 63

3 Alkalinity and acidity as tools for quantifying acid-base equilibrium and designing water and wastewater treatment processes — 67
3.1 Introduction — 67
3.2 Alkalinity and acidity – definitions — 67
3.2.1 First verbal definition — 68
3.2.2 Second verbal definition — 68
3.3 Development of alkalinity and acidity equations for monoprotic, weak-acid (weak-base) systems — 70
3.3.1 Developing an equation for the alkalinity of a monoprotic, weak acid with HA as the reference species — 70
3.3.2 Deriving an equation for the acidity of a monoprotic, weak acid with A^- as the reference species — 72
3.3.3 Generalization and elaboration of the concepts alkalinity and acidity and the relationships between them for a monoprotic weak acid — 73
3.3.4 Introduction to measuring alkalinity and acidity in the laboratory — 74
3.4 Developing equations for the description of alkalinity and acidity values of diprotic weak-acid systems — 75
3.5 The carbonate system as an example of a diprotic system — 75
3.5.1 Developing alkalinity and acidity equations with respect to the equivalence point of $H_2CO_3^*$ — 76
3.5.2 Developing alkalinity and acidity equations around the equivalence point of HCO_3^- — 78
3.5.3 Developing the alkalinity and acidity equations around the equivalence point of CO_3^{2-} — 79
3.5.4 Useful notes about the carbonate system and useful relationships between the values of pH, alkalinity, acidity and C_T — 80

3.6 Determining alkalinity and acidity values in the lab: Characterization of acid–base relationships in natural waters — 82
3.7 Standard laboratory alkalinity analysis — 83
3.8 More on water characterization through analysis of C_T and additional forms of alkalinity and acidity — 84
3.9 Buffer capacity of solutions — 85
3.9.1 Buffer capacity or buffer intensity — 85
3.9.2 Deriving the buffer capacity equation for a monoprotic, weak acid — 86
3.9.3 Expansion on the derivation of β to include diprotic and polyprotic systems using the carbonate system as an example for polyprotic systems — 88
3.10 Titration curves — 89
3.11 Alkalinity and acidity equations composed of several weak-acid systems — 92
3.12 Elaboration on laboratory methods for measuring alkalinity and acidity — 95
3.12.1 Gran titration for determining alkalinity — 97
3.12.2 Mathematical derivation of the Gran method — 98

4 Use of alkalinity and acidity equations for quantifying phenomena in chemical/environmental engineering and design of water and wastewater treatment processes — 101
4.1 Theoretical background related to acid-base calculations in aqueous solutions from the knowledge of alkalinity and acidity parameters — 101
4.2 Examples of acid-base problems from chemical/environmental engineering in which alkalinity and acidity terms can be used — 104
4.3 Examples for implementation of the principles of the calculation method for solving problems related to wastewater — 111
4.4 Using a method based on alkalinity and acidity mass balances to quantify the change in characterization of acid-base properties of water as a result of chemical dosage (deliberate or unintentional) — 117
4.4.1 Solution outline — 118

5 Equilibrium between the aqueous and gas phases and implications for water treatment processes — 125
5.1 Introduction — 125
5.2 Expressions describing concentrations of components in the gas phase — 126
5.3 Henry’s law — 127

5.4 Factors affecting henry's law constant — 130
5.4.1 The effect of the solution Ionic strength on Henry's constant — 131
5.5 Systems that are closed to the atmosphere — 132
5.6 The carbonate system in the context of gas-liquid phase equilibrium equations — 133
5.7. Distribution of species as a function of pH for systems that are in equilibrium with the gas phase — 137

6 Principles of equilibrium between the aqueous and solid phases with emphasis on precipitation and dissolution of $CaCO_{3(s)}$ — 145
6.1 Introduction — 145
6.2 The effect of Ionic strength on the solubility constants — 147
6.3 Effect of temperature on the solubility constant — 148
6.4 Effect of the addition of one of the solid components on the concentration of the other component in equilibrium (common ion effect) — 148
6.5 Effect of side reactions on solubility of solids — 150
6.6 Precipitation/dissolution of $CaCO_3$: qualitative and quantitative assessment of the saturation state — 151
6.6.1 Langelier saturation index (LSI) — 151
6.6.1.1 Mathematical development of the formula for calculating pH_L — 151
6.6.1.2 The inherent problems in the Langelier method — 152
6.6.2 Precise quantification of $CaCO_3$ precipitation/dissolution potential (CCPP method) — 153
6.6.3 Determination of the precipitation potential (numerical method) — 154
6.6.4 Comparison of LSI values and CCPP in a given solution — 155
6.6.5 Determining the precipitation potential (CCPP) graphically — 156
6.6.5.1 Modified Caldwell–Lawrence (MCL) diagrams — 156
6.6.5.2 MCL graph development — 156

7 Computer software for calculations in the field of aquatic chemistry and water treatment processes, with an emphasis on the Stasoft4.0 program — 163
7.1 Introduction — 163
7.2 Principles of calculation and limitations — 163
7.3 How to use the software — 165
7.4 Simulation of water treatment processes using the Stasoft4 program — 174

8 Water softening using the lime-soda ash softening method — 179
8.1 Introduction — 179

8.2 Deliberate modification of the aqueous-solid equilibrium state characteristics by the addition of chemicals to water — 179
8.3 Water softening — 181
8.3.1 Softening by lime-soda ash method — 183
8.3.2 Basic description of the stages of the lime-soda ash softening process — 184

9 Water stabilization and remineralization — 193
9.1 Introduction — 193
9.2 Overview of existing stabilization/remineralization technologies — 193
9.3 Direct dosage of chemicals — 194
9.3.1 $Ca(OH)_2$ followed by CO_2 addition — 194
9.3.2 $Ca(OH)_2$ and Na_2CO_3 or $Ca(OH)_2$ and $NaHCO_3$ — 195
9.3.3 $CaCl_2$ and $NaHCO_3$ — 196
9.4 Blending of low TDS water and other water sources — 196
9.4.1 Blending case study — 197
9.5 Post treatment methods based on (quarry) calcite dissolution — 198
9.6 Acidic chemical agents used to enhance calcite dissolution — 198
9.7 Final pH adjustment — 200
9.8 Unintentional $CO_{2(g)}$ emission during calcite dissolution — 201
9.9 Dolomite dissolution as means of supplying Ca^{2+}, Mg^{2+} and carbonate alkalinity — 201
9.10 Design of stabilization/remineralization processes — 205

10 Problems and solutions — 213

References — 243

Index — 247
