**Preface — V**

**Notation — XIII**

## **1 Preliminaries — 1**

- 1.1 Sobolev spaces — 1
- 1.2 Maximum principles — 14
  - 1.2.1 Weak maximum principle — 15
  - 1.2.2 Strong maximum principle — 20
- 1.3 Compact self-adjoint operators — 23
- 1.4 Eigenvalues of elliptic problems — 29
- 1.5 Systems of elliptic equations — 43
  - 1.5.1 Spectral theory for symmetric systems — 47
  - 1.5.2 Weak maximum principle for cooperative systems — 52
  - 1.5.3 Comparison principles for semilinear elliptic systems — 55

## **2 Introduction to Morse theory — 59**

- 2.1 Morse theory on finite dimensional manifolds — 59
  - 2.1.1 Introduction — 59
  - 2.1.2 Morse lemma and deformation theorems — 62
  - 2.1.3 Morse inequalities — 68
- 2.2 Infinite dimensional Morse theory — 73
  - 2.2.1 Critical groups and Morse lemma — 73
  - 2.2.2 Morse inequalities — 76
  - 2.2.3 Morse index of mountain pass critical points — 78

## **3 Morse theory for semilinear elliptic equations — 83**

- 3.1 Introduction — 83
- 3.2 Positive solutions of Dirichlet problems — 86
  - 3.2.1 Existence of a positive solution by the mountain pass theorem — 87
  - 3.2.2 Existence of a positive solution by constrained minimization — 89
  - 3.2.3 Uniqueness of solutions of Morse index one of Lane-Emden problems — 91
- 3.3 Sign changing solutions of Dirichlet problems — 97
  - 3.3.1 Existence of a solution with Morse index two by constrained minimization — 97
  - 3.3.2 Estimates of Morse index for symmetric sign changing solutions: the autonomous case — 104

3.3.3	Estimates of Morse index for symmetric sign changing solutions: the nonautonomous case — 110
<b>4</b>	<b>Morse index of radial solutions of Lane–Emden problems — 121</b>
4.1	Spectral decomposition for the linearized operator at a radial solution — 121
4.2	Asymptotic analysis of radial solutions — 128
4.2.1	The case $N \geq 3$ — 128
4.2.2	The case $N = 2$ — 132
4.3	Computation of the Morse index of radial solutions in dimension $N \geq 3$ — 136
4.4	Computation of the Morse index in dimension $N = 2$ — 143
4.5	A weighted eigenvalue problem in $\mathbb{R}^N$ — 147
<b>5</b>	<b>Bifurcation from radial solutions — 155</b>
5.1	Preliminaries — 155
5.2	Bifurcation with respect to the exponent $p$ — 158
5.2.1	Asymptotic analysis of the radial solution — 158
5.2.2	Asymptotic behavior of the radial eigenvalue $\tilde{\beta}_1(p)$ — 160
5.2.3	Bifurcation results — 165
5.3	Bifurcation with respect to the radius of the annulus — 167
5.3.1	Asymptotic estimates for the radial solution — 167
5.3.2	Asymptotic analysis of the eigenvalue $\tilde{\beta}_1(R)$ — 171
5.3.3	Bifurcation results — 175
<b>6</b>	<b>Morse index and symmetry for semilinear elliptic equations in bounded domains — 177</b>
6.1	Symmetry and monotonicity of positive solutions — 177
6.1.1	Moving planes and symmetry — 177
6.1.2	Monotonicity by the method of moving planes — 182
6.1.3	Counterexamples to radial symmetry — 184
6.2	Foliated Schwarz symmetry and related properties — 186
6.3	Foliated Schwarz symmetry of low Morse index solutions of elliptic Dirichlet problems — 196
6.3.1	Convex nonlinearities — 196
6.3.2	Nonlinearities with a convex derivative — 199
6.4	Symmetry of solutions of mixed boundary value problems — 205
<b>7</b>	<b>Morse index and symmetry for elliptic systems in bounded domains — 213</b>
7.1	Morse index of solutions of elliptic systems — 213
7.2	Symmetry results — 215
7.2.1	Moving and rotating planes — 215

7.2.2	Foliated Schwarz symmetry —	217
7.2.3	Nonlinearities having convex components —	219
7.2.4	Nonlinearities with convex derivatives —	224
7.3	Examples —	229
<b>8</b>	<b>Some results in unbounded domains —</b>	<b>235</b>
8.1	Moving planes and symmetry in unbounded domains —	235
8.2	Foliated Schwarz symmetry —	239
8.3	Nonexistence and classification results —	242
<b>Bibliography — 245</b>		
<b>Index — 255</b>
