Preface — V

1 Introduction — 1

- 1.1 What is a spin? — 1
- 1.2 Single spin algebra — 2
- 1.3 A spin in a real material — 4
- 1.4 The 3d electrons in ferromagnetic atoms — 5
- 1.5 An electron in a phase space – the density of states — 8
- 1.6 Full quantum perspective for the electron spin description – the second quantization — 11
- 1.7 Spin transport and random-walk — 13
- 1.8 Magnetization and micromagnetism — 16

2 Physical effects in spintronic structures — 21

- 2.1 Classical dipole interactions versus quantum exchange interaction — 21
- 2.2 Double-exchange interaction — 22
- 2.3 The RKKY interaction — 24
- 2.4 Examples of anisotropy effects in low-dimensional objects — 25
 - 2.4.1 Dots (0D) — 26
 - 2.4.2 Wires (1D) — 35
 - 2.4.3 Layers (2D) and spatial systems (3D) — 40
- 2.5 Magnetization dynamics in low-dimensional magnetic systems — 42

3 Micromagnetic equations in magnetization dynamic studies — 51

- 3.1 Magnetization dynamics in materials with strong spin–orbit coupling: The Dzyaloshinskii–Moriya interaction — 62
- 3.2 Skyrmions — 70
- 3.3 Magnetization dynamics for temperatures above 0 K — 74

4 Sensing magnetization dynamics — 89

5 Contact effects in layered structures — 117

- 5.1 Boundary conditions and magnetic interface effects — 117
- 5.2 Ferromagnetic–antiferromagnetic junction: EB and 90° coupling — 119
- 5.3 Superconductor–normal conductor junction: Andreev reflection — 125

6	Transport in spintronic structures — 129
6.1	Diffusion and drift of spins — 129
6.2	Tunnel effect — 132
6.2.1	The single tunnel junction — 136
6.2.2	The lead–island–lead basic three-component system — 142
6.3	Coulomb blockade — 150
6.4	Kondo effect — 153
6.5	Reflection and scattering of carriers — 155
6.6	Spin injection and spin accumulation — 156
6.7	Spin-transfer torque — 160
7	Spintronics devices — 165
7.1	Electronic parameters of spintronic devices — 165
7.2	Spin valve — 165
7.3	Magnetic tunnel junctions — 170
7.4	Magnetic diode — 173
7.5	Magnetic electroluminescent diode — 176
7.6	Single-electron transistor — 177
7.7	Bipolar magnetic transistor — 182
7.8	Magnetic NOT logic gate — 183
7.9	Other magnetic logic gates and devices — 185
7.10	From magnetic tape storage systems to hard disk read/write heads and beyond — 187
7.11	Magnetic memory cell – MRAM — 197
7.12	Beyond von Neumann architecture – neuromorphic computing — 199
7.13	CMOS-compatible spintronics and hybrid solutions — 208
7.14	Quantum interferometers, Aharonov–Bohm, and Fano effects — 211
7.15	Magnetic markers and biochips — 214
8	Influence of external factors and physical fields onto spintronic devices work — 217
8.1	Temperature-supported switching of elements — 217
8.2	Spin caloritronics — 219
8.3	Pressure — 222
8.4	Strain — 223
8.5	Electric field — 224
8.6	Light — 225
8.7	Electric current and switching of spintronic devices — 226

9	Materials in commercial applications — 227
9.1	Metals and half-metals — 227
9.2	Diluted magnetic semiconductors — 228
9.3	Multiferroics — 228
9.4	Antiferromagnets — 229
9.5	Organic spintronics — 229
9.6	Other materials in layered systems — 230

	Bibliography — 231
--	---------------------------

	Index — 283
