

Contents

Preface — V

Kai Diethelm

Fundamental approaches for the numerical handling of fractional operators and time-fractional differential equations — 1

Xuan Zhao and Zhi-Zhong Sun

Time-fractional derivatives — 23

Hengfei Ding and Changpin Li

High-order finite difference methods for fractional partial differential equations — 49

Chuanju Xu

Spectral methods for some kinds of fractional differential equations — 101

Jie Shen and Changtao Sheng

Spectral methods for fractional differential equations using generalized Jacobi functions — 127

Anna Lischke, Mohsen Zayernouri, and Zhongqiang Zhang

Spectral and spectral element methods for fractional advection–diffusion–reaction equations — 157

Weihua Deng and Xudong Wang

Discontinuous Galerkin and finite element methods — 185

Fawang Liu and Ian Turner

Numerical methods for time-space fractional partial differential equations — 209

Guofei Pang and Wen Chen

Comparison of two radial basis collocation methods for Poisson problems with fractional Laplacian — 249

Yong Zhang and Mark Meerschaert

Particle tracking solutions of vector fractional differential equations: A review — 275

Martin Stynes

Singularities — 287

Hong Wang

Fast numerical methods for space-fractional partial differential equations — 307

Roberto Garrappa and Marina Popolizio

Fast methods for the computation of the Mittag-Leffler function — 329

Index — 347
