Preface — VII

1 Preliminaries — 1

- 1.1 Set-Theoretic Basics — 1
 - 1.1.1 Some Terminology and Notations — 1
 - 1.1.2 Cardinality and Countability — 2
- 1.2 Terminology Related to Functions — 4
- 1.3 Upper and Lower Limits — 6
- 1.4 Certain Facts from Linear Algebra — 6
 - 1.4.1 Coordinate Vector Mapping — 7
 - 1.4.2 Matrix Representations of Linear Operators — 7
 - 1.4.3 Change of Basis, Transition Matrices — 10
 - 1.4.4 Cayley–Hamilton Theorem — 13

2 Metric Spaces — 15

- 2.1 Definition and Examples — 15
- 2.2 Hölder's and Minkowski's Inequalities — 17
 - 2.2.1 Conjugate Indices — 17
 - 2.2.2 Young's Inequality — 18
 - 2.2.3 The Case of n -Tuples — 19
 - 2.2.4 Sequential Case — 21
- 2.3 Subspaces of a Metric Space — 22
- 2.4 Function Spaces — 23
- 2.5 Further Properties of Metric — 25
- 2.6 Convergence and Continuity — 26
 - 2.6.1 Convergence — 26
 - 2.6.2 Continuity, Uniform Continuity, and Lipschitz Continuity — 28
- 2.7 Balls, Separation, and Boundedness — 30
- 2.8 Interior Points, Interiors, Open Sets — 33
- 2.9 Limit and Isolated Points, Closures, Closed Sets — 34
- 2.10 Exterior and Boundary — 38
- 2.11 Dense Sets and Separability — 39
- 2.12 Equivalent Metrics, Homeomorphisms and Isometries — 40
 - 2.12.1 Equivalent Metrics — 40
 - 2.12.2 Homeomorphisms and Isometries — 41
- 2.13 Completeness — 43
 - 2.13.1 Cauchy/Fundamental Sequences — 43
 - 2.13.2 Complete Metric Spaces — 45
 - 2.13.3 Subspaces of Complete Metric Spaces — 49
 - 2.13.4 Nested Balls Theorem — 50

2.14	Category and Baire Category Theorem —	53
2.14.1	Nowhere Denseness —	53
2.14.2	Category —	56
2.14.3	Baire Category Theorem —	57
2.15	Banach Fixed-Point Theorem and Applications —	61
2.15.1	Fixed Points —	61
2.15.2	Contractions —	61
2.15.3	Banach Fixed-Point Theorem —	63
2.15.4	Applications —	65
2.16	Compactness —	76
2.16.1	Total Boundedness —	77
2.16.2	Compactness, Precompactness —	82
2.16.3	Hausdorff Criterion —	88
2.16.4	Compactness in Certain Complete Metric Spaces —	90
2.16.5	Other Forms of Compactness —	92
2.16.6	Equivalence of Different Forms of Compactness —	93
2.16.7	Compactness and Continuity —	95
2.17	Arzelà–Ascoli Theorem —	99
2.17.1	Space $(C(X, Y), \rho_\infty)$ —	100
2.17.2	Uniform Boundedness and Equicontinuity —	102
2.17.3	Arzelà–Ascoli Theorem —	103
2.17.4	Application: Peano’s Existence Theorem —	105
2.18	Problems —	108
3	Vector Spaces, Normed Vector Spaces, and Banach Spaces —	119
3.1	Vector Spaces —	119
3.1.1	Definition, Examples, Properties —	119
3.1.2	Homomorphisms and Isomorphisms —	122
3.1.3	Subspaces —	123
3.1.4	Spans and Linear Combinations —	125
3.1.5	Linear Independence, Hamel Bases, Dimension —	126
3.1.6	New Spaces from Old —	131
3.1.7	Disjoint and Complementary Subspaces, Direct Sum Decompositions, Deficiency and Codimension —	134
3.2	Normed Vector and Banach Spaces —	138
3.2.1	Definitions and Examples —	138
3.2.2	Series and Completeness Characterization —	141
3.2.3	Comparing Norms, Equivalent Norms —	143
3.2.4	Isometric Isomorphisms —	145
3.2.5	Topological and Schauder Bases —	146
3.3	Finite-Dimensional Spaces and Related Topics —	148
3.3.1	Norm Equivalence and Completeness —	149

3.3.2	Finite-Dimensional Subspaces and Bases of Banach Spaces —	151
3.4	Riesz's Lemma and Implications —	153
3.5	Problems —	155
4	Linear Operators —	161
4.1	Linear Operators and Functionals —	161
4.1.1	Definitions and Examples —	161
4.1.2	Kernel, Range, and Graph —	163
4.1.3	Rank-Nullity and Extension Theorems —	164
4.2	Bounded Linear Operators and Functionals —	167
4.2.1	Definitions, Properties, Examples —	167
4.2.2	Kernel —	172
4.2.3	Space of Bounded Linear Operators, Dual Space —	172
4.3	Uniform Boundedness Principle —	177
4.4	Open and Inverse Mapping Theorems —	179
4.4.1	Open Mapping Theorem —	180
4.4.2	Inverse Mapping Theorem and Applications —	184
4.5	Closed Linear Operators, Closed Graph Theorem —	188
4.5.1	Definition, Characterizations, Examples —	188
4.5.2	Kernel —	191
4.5.3	Closed Graph Theorem —	191
4.5.4	Application: Projection Operators —	193
4.6	Equivalence of <i>OMT</i> , <i>IMT</i> , and <i>CGT</i> —	198
4.7	Problems —	199
5	Elements of Spectral Theory in a Banach Space Setting —	207
5.1	Algebraic Operations on Linear Operators —	207
5.2	Resolvent Set and Spectrum of a Closed Linear Operator —	208
5.2.1	Definitions —	208
5.2.2	Spectrum Classification, Geometric Multiplicity —	209
5.2.3	Examples —	210
5.3	Spectral Radius —	216
5.4	Resolvent of a Closed Linear Operator —	218
5.4.1	Definition and Examples —	218
5.4.2	Resolvent Identity —	222
5.4.3	Analytic Vector Functions —	223
5.4.4	Neumann Expansion Theorem —	226
5.4.5	Properties of Resolvent Set and Resolvent Function —	227
5.4.6	Spectrum —	229
5.5	Spectral Theory of Bounded Linear Operators —	230
5.5.1	Gelfand's Spectral Radius Theorem —	230
5.5.2	Quasinilpotent Operators —	237

5.5.3	Operator Polynomials —	237
5.5.4	Operator Exponentials —	242
5.6	Spectral Theory in a Finite-Dimensional Setting —	242
5.6.1	Basics —	243
5.6.2	Special Matrix Representations —	246
5.6.3	Spectral Decomposition —	252
5.6.4	Application: Abstract Evolution Equations —	255
5.7	Compact Linear Operators —	266
5.7.1	Definition, Characterization, Examples —	267
5.7.2	Compactness of the Identity Operator —	271
5.7.3	Properties —	272
5.7.4	Approximation by Finite-Rank Operators —	275
5.7.5	Fredholm Alternative —	278
5.7.6	Spectrum of a Compact Operator, Riesz–Schauder Theorem —	279
5.7.7	Application: Fredholm Integral Equations of the Second Kind —	283
5.8	Problems —	284
6	Elements of Spectral Theory in a Hilbert Space Setting —	293
6.1	Inner Product and Hilbert Spaces —	293
6.1.1	Definitions and Examples —	293
6.1.2	Inner Product Norm, Cauchy–Schwarz Inequality —	295
6.1.3	Hilbert Spaces —	298
6.1.4	Geometric Properties of Inner Product Norm —	299
6.2	Convexity and Nearest Point Property —	304
6.2.1	Convexity —	304
6.2.2	Nearest Point Property —	306
6.3	Projection Theorem —	308
6.3.1	Orthogonal Complements —	308
6.3.2	Projection Theorem —	310
6.3.3	Orthogonal Projections —	313
6.4	Riesz Representation Theorem —	315
6.5	Orthogonal and Orthonormal Sets —	318
6.6	Gram–Schmidt Process —	323
6.7	Generalized Fourier Series —	325
6.7.1	Finite Orthonormal Set —	325
6.7.2	Arbitrary Orthonormal Set —	328
6.7.3	Orthonormal Sequence —	332
6.8	Orthonormal Bases and Orthogonal Dimension —	332
6.9	Adjoint Operators —	338
6.9.1	Definition, Linearity, Examples —	338
6.9.2	Existence, Graph, and Closedness —	341
6.9.3	Second Adjoint —	343

6.9.4	Properties —	344
6.9.5	Inverse of Adjoint, Orthogonal Sum Decompositions —	347
6.9.6	Spectrum of Adjoint Operator —	348
6.10	Symmetry and Self-Adjointness —	351
6.10.1	Definitions, Examples, Properties —	351
6.10.2	Spectrum and Eigenvectors of a Self-Adjoint Operator —	354
6.10.3	Bounded Self-Adjoint Operators —	356
6.11	Compact Operators —	356
6.11.1	Fredholm Alternative in a Hilbert Space Setting —	356
6.11.2	Compact Self-Adjoint Operators, Spectral Theorem —	363
6.12	Problems —	374

A The Axiom of Choice and Equivalents — 383

A.1	The Axiom of Choice —	383
A.1.1	The Axiom of Choice —	383
A.1.2	Controversy —	383
A.1.3	Timeline —	384
A.2	Ordered Sets —	384
A.3	Equivalents —	388

Bibliography — 395

Index — 399
