## Preface — v

### **1 General introduction — 1**

- 1.1 General classes of formulations — 1
- 1.2 Classification of disperse systems — 2
- 1.3 The interfacial region — 4
- 1.4 Solid dosage forms — 6
- 1.5 Semi-solid formulations — 6
- 1.6 Outline of the book — 7

### **2 Classification of surfactants, their solution properties and self-assembly structures — 59**

- 2.1 Introduction — 59
- 2.2 Classification of surfactants — 59
  - 2.2.1 Anionic surfactants — 60
  - 2.2.2 Cationic surfactants — 63
  - 2.2.3 Amphoteric (zwitterionic) surfactants — 65
  - 2.2.4 Nonionic surfactants — 66
  - 2.2.5 Speciality surfactants. Fluorocarbon and silicone surfactants — 70
  - 2.2.6 Gemini surfactants — 71
  - 2.2.7 Surfactants derived from mono- and polysaccharides — 71
  - 2.2.8 Naturally occurring surfactants — 72
  - 2.2.9 Biosurfactants — 76
- 2.3 Aggregation of surfactants, self-assembly structures, liquid crystalline phases — 79
  - 2.3.1 Physical properties of surfactant solutions — 79
  - 2.3.2 Thermodynamics of micellization — 85
- 2.4 Surfactant self-assembly — 95
  - 2.4.1 Structure of liquid crystalline phases — 95
- 2.5 Experimental studies of the phase behaviour of surfactants — 97

### **3 General classification of polymeric surfactants and their solution properties — 101**

- 3.1 Introduction — 101
- 3.2 Classification of polymeric surfactants — 101
  - 3.2.1 Homopolymers — 101
  - 3.2.2 Random copolymers — 102
  - 3.2.3 Block and graft copolymers — 102
  - 3.2.4 Polymeric surfactants based on polysaccharides — 104

3.2.5	Natural polymeric biosurfactants —	108
3.2.6	Silicone surfactants —	109
3.2.7	Polymeric surfactants for nonaqueous dispersions —	110
3.2.8	Polymerizable surfactants —	112
3.3	Solution properties of polymeric surfactants —	113
3.3.1	Polymer conformation and structure —	113
3.3.2	Free energy of mixing of polymer with solvent – the Flory–Huggins theory —	115
3.4	Characterization of polymers in solution —	119
3.4.1	Scattering techniques —	119
3.5	Phase separation of polymer solutions —	124
3.6	Solubility parameter concept for selecting the right solvent for a polymer —	125
<b>4</b>	<b>Adsorption of surfactants at the liquid/liquid interface —</b>	<b>127</b>
4.1	Introduction —	127
4.2	The interface (Gibbs dividing line) —	128
4.3	General treatment of surfactant adsorption —	129
4.3.1	The Gibbs adsorption isotherm —	129
4.3.2	Equation of state approach —	133
4.3.3	The Langmuir, Szyszkowski and Frumkin equations —	134
4.3.4	Effectiveness of surfactant adsorption at the liquid/liquid interface —	135
4.3.5	Efficiency of adsorption of surfactant at the liquid/liquid interface —	135
4.3.6	Adsorption from mixtures of two surfactants —	137
4.3.7	Adsorption of Macromolecules —	138
4.4	Interfacial tension measurements —	140
4.4.1	The Wilhelmy plate method —	140
4.4.2	The pendent drop method —	141
4.4.3	Sessile drop method —	142
4.4.4	The du Noüy ring method —	143
4.4.5	The drop volume (weight) method —	143
4.4.6	The spinning drop method —	144
<b>5</b>	<b>Surfactant adsorption at the solid/liquid interface —</b>	<b>147</b>
5.1	Introduction —	147
5.2	Adsorption of ionic surfactants on hydrophobic surfaces —	149
5.3	Examples of adsorption isotherms for ionic surfactants on hydrophobic surfaces —	153
5.4	Adsorption of ionic surfactants on polar surfaces —	155
5.5	Adsorption of nonionic surfactants —	156

5.6	Theoretical treatment of surfactant adsorption —	159
5.7	Examples of typical adsorption isotherms of model nonionic surfactants on hydrophobic solids —	161
<b>6</b>	<b>Adsorption and conformation of polymeric surfactants at interfaces —</b>	<b>167</b>
6.1	Introduction —	167
6.2	Polymers at interfaces —	168
6.3	Theories of polymer adsorption —	172
6.4	Scaling theory for polymer adsorption —	180
6.5	Experimental techniques for studying polymeric surfactant adsorption —	182
6.5.1	Measurement of the adsorption isotherm —	183
6.5.2	Measurement of the fraction of segments $p$ —	183
6.5.3	Determination of the segment density distribution $\rho(z)$ and adsorbed layer thickness $\delta_h$ —	184
6.5.4	Examples of the adsorption isotherms of nonionic polymeric surfactants —	187
6.5.5	Adsorbed layer thickness results —	191
6.6	Kinetics of polymer adsorption —	193
<b>7</b>	<b>Electrostatic stabilization of dispersions —</b>	<b>197</b>
7.1	Introduction —	197
7.2	Distribution of charge and potential at the interface and structure of the electrical double layer —	197
7.3	Electrical double layer repulsion —	201
7.4	Van der Waals attraction —	209
7.5	Total energy of interaction —	217
7.5.1	Deryaguin–Landau–Verwey–Overbeek (DLVO) theory —	217
7.6	Criteria for stabilization of suspensions or emulsions with double layer interaction —	218
<b>8</b>	<b>Interaction between particles or droplets containing adsorbed polymer layers and the theory of steric stabilization —</b>	<b>221</b>
8.1	Introduction —	221
8.2	Interaction between particles or droplets containing adsorbed polymer layers —	222
8.2.1	Mixing interaction $G_{\text{mix}}$ —	223
8.2.2	Elastic interaction $G_{\text{el}}$ —	224
8.2.3	Total energy of interaction —	225
8.2.4	Criteria for effective steric stabilization —	226
8.3	Emulsions stabilized by polymeric surfactants —	227

8.4	Suspensions stabilized using polymeric surfactants —	231
8.4.1	Polymeric surfactants in emulsion polymerization —	232
8.4.2	Dispersion polymerization —	238
8.4.3	Polymeric surfactants for stabilization of preformed latex dispersions —	239
8.4.4	Interaction forces between adsorbed layers of PMMA/MA(PEO) <sub>n</sub> graft copolymer —	242
8.5	Use of polymeric surfactants for preparation and stabilization of nanoemulsions —	245
<b>9</b>	<b>Flocculation of dispersions —</b>	<b>253</b>
9.1	Introduction —	253
9.2	Mechanism of aggregation of electrostatically stabilized dispersions —	254
9.3	Kinetics of flocculation of dispersions —	256
9.3.1	Diffusion limited aggregation (fast flocculation kinetics) —	256
9.3.2	Potential limited aggregation (slow flocculation kinetics) —	257
9.3.3	Weak (reversible) flocculation —	259
9.3.4	Orthokinetic flocculation —	259
9.3.5	Aggregate structure —	263
9.4	Flocculation of sterically stabilized dispersions —	264
9.4.1	Weak flocculation —	264
9.4.2	Incipient flocculation —	264
9.4.3	Depletion flocculation —	267
9.4.4	Bridging flocculation by polymers and polyelectrolytes —	268
<b>10</b>	<b>Ostwald ripening in dispersions and its prevention —</b>	<b>273</b>
10.1	Introduction —	273
10.2	Driving force for Ostwald ripening —	274
10.3	Kinetics of Ostwald ripening —	275
10.4	Reduction of Ostwald ripening in emulsions —	279
10.4.1	Addition of a small proportion of highly insoluble oil —	279
10.4.2	Modification of the interfacial layer for reducing Ostwald ripening —	281
10.4.3	Influence of initial droplet size of emulsions on the Ostwald ripening rate —	282
10.5	Thermodynamic theory of crystal growth —	283
10.6	Molecular-kinetic theory of crystal growth —	285
10.7	The influence of dislocations on crystal growth —	286
10.8	Influence of impurities on crystal growth and habit —	287
10.9	Polymorphic changes —	288
10.10	Crystal growth inhibition —	289

<b>11</b>	<b>Emulsion coalescence and its prevention — 293</b>
11.1	Introduction — 293
11.2	Forces across liquid films — 294
11.2.1	Disjoining pressure approach — 295
11.2.2	Interfacial tension of liquid films — 296
11.3	Film rupture — 297
11.4	Rate of coalescence between droplets — 298
11.5	Reduction of coalescence — 304
11.5.1	Use of mixed surfactant films — 304
<b>12</b>	<b>Phase inversion and its prevention — 313</b>
12.1	Introduction — 313
12.2	Catastrophic inversion — 313
12.3	Transitional inversion — 316
12.4	The phase inversion temperature (PIT) — 318
<b>13</b>	<b>Sedimentation of suspensions, creaming of emulsions and their prevention — 325</b>
13.1	Introduction — 325
13.2	Sedimentation rate of suspensions and creaming rate of emulsions — 327
13.3	Sedimentation or creaming in non-Newtonian fluids — 329
13.4	Prevention of sedimentation and creaming — 333
13.4.1	Balance of the density of the disperse phase and medium — 333
13.4.2	Reduction of particle or droplet size — 333
13.4.3	Use of high molecular weight thickeners — 333
13.4.4	Reduction of creaming/sedimentation by using associative thickeners — 335
13.4.5	Controlled flocculation — 338
13.4.6	Depletion flocculation — 343
13.4.7	Use of “inert” fine particles — 347
13.4.8	Use of mixtures of polymers and finely divided particulate solids — 350
13.4.9	Use of liquid crystalline phases — 350
<b>14</b>	<b>Flow characteristics (rheology) of formulations — 353</b>
14.1	Introduction — 353
14.2	Rheological techniques — 354
14.2.1	Steady state shear stress $\sigma$ –shear rate $\dot{\gamma}$ measurements — 354
14.2.2	Rheological models for analysis of flow curves — 356
14.2.3	Time effects during flow – thixotropy and negative (or anti-)thixotropy — 358

14.2.4	Strain relaxation after sudden application of stress – constant stress (creep) measurements —	360
14.2.5	Stress relaxation after sudden application of strain —	363
14.2.6	Dynamic (oscillatory) measurements —	365
14.3	Rheology of dispersions —	370
14.3.1	The Einstein equation —	370
14.3.2	The Bachelor equation —	371
14.3.3	Rheology of concentrated dispersions —	371
14.4	Examples of strongly flocculated (coagulated) suspension —	387
14.4.1	Coagulation of electrostatically stabilized suspensions by addition of electrolyte —	387
14.4.2	Strongly flocculated sterically stabilized systems —	389
14.4.3	Models for interpreting rheological results —	393
14.5	Using rheological measurements to assess and predict the long-term physical stability of formulations —	396
14.5.1	Assessment of creaming and sedimentation —	396
14.5.2	Accelerated tests and their limitations —	396
14.5.3	Rheological techniques for predicting sedimentation or creaming —	398
14.5.4	Examples of correlation of sedimentation or creaming with residual (zero shear) viscosity —	399
14.5.5	Assessing and predicting flocculation using rheological techniques —	404
14.5.6	Examples of applications of rheology to assessing and predicting flocculation —	408
14.5.7	Assessing and predicting emulsion coalescence using rheological techniques —	411
