Contents

Preface — VII

Software — IX

Acknowledgment — XI

Support — XIII

1 Computer representation of numbers and roundoff error — 1
1.1 Examples of the effects of roundoff error — 1
1.2 Binary numbers — 4
1.3 64 bit floating-point numbers — 6
1.3.1 Adding large and small numbers is bad — 8
1.3.2 Subtracting two nearly equal numbers is bad — 8
1.4 Exercises — 10

2 Solving linear systems of equations — 13
2.1 Solving triangular linear systems — 13
2.2 From Gaussian elimination to LU factorization — 15
2.3 Pivoting — 18
2.3.1 Work in LU/GE — 23
2.4 Direct methods for large sparse linear systems — 23
2.5 Conjugate gradient — 26
2.6 Preconditioning and ILU — 28
2.7 Accuracy in solving linear systems — 30
2.7.1 Matrix and vector norms and condition number — 31
2.7.2 Condition number of a matrix — 33
2.7.3 Sensitivity in linear system solving — 34
2.7.4 Error and residual in linear system solving — 36
2.8 Exercises — 37

3 Least squares problems — 41
3.1 Solving LSQ problems with the normal equations — 42
3.2 QR factorization and the Gram–Schmidt process — 44
3.3 Curve of best fit — 48
3.4 Exercises — 51

4 Finite difference methods — 53
4.1 Convergence terminology — 53

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.2 Approximating the first derivative — 55
4.2.1 Forward and backward differences — 55
4.2.2 Centered difference — 58
4.2.3 Three point difference formulas — 60
4.2.4 Further notes — 62
4.3 Approximating the second derivative — 62
4.4 Application: Initial value ODEs using the forward Euler method — 63
4.5 Application: Boundary value ODEs — 65
4.6 Exercises — 69

5 Solving nonlinear equations — 71
5.1 Convergence criteria of iterative methods for nonlinear systems — 71
5.2 The bisection method — 72
5.3 Fixed-point theory and algorithms — 77
5.4 Newton's method — 82
5.5 Secant method — 86
5.6 Comparing bisection, Newton, Secant method — 86
5.7 Combining secant and bisection and the fzero command — 87
5.8 Equation solving in higher dimensions — 87
5.9 Exercises — 90

6 Eigenvalues and eigenvectors — 93
6.1 Theoretical background — 93
6.2 Single-vector iterations — 94
6.3 Multiple-vector iterations — 101
6.4 Finding all eigenvalues and eigenvectors of a matrix — 103
6.5 Exercises — 103

7 Interpolation — 105
7.1 Interpolation by a single polynomial — 105
7.1.1 Lagrange interpolation — 107
7.2 Chebyshev interpolation — 110
7.3 Piecewise linear interpolation — 113
7.4 Piecewise cubic interpolation (cubic spline) — 116
7.5 Exercises — 119

8 Numerical integration — 121
8.1 Preliminaries — 121
8.2 Newton–Cotes rules — 124
8.3 Composite rules — 127
8.4 Clenshaw–Curtis quadrature — 130
8.5 Gauss quadrature — 133

8.6 MATLAB's integral function — 138
8.7 Exercise — 139

9 Initial value problems — 141
9.1 Reduction of higher order IVPs to first order — 142
9.2 The forward Euler method — 143
9.3 Heun's method and RK4 — 146
9.4 Stiff problems and numerical stability — 147
9.4.1 Implicit methods and unconditional stability — 149
9.5 Summary, general strategy, and MATLAB ODE solvers — 150
9.6 Fitting ODE parameters to data — 152
9.7 Exercises — 155

10 Partial differential equations — 159
10.1 The 1D heat equation — 159
10.1.1 A maximum principle and numerical stability — 166
10.2 The 2D Poisson equation — 168
10.3 Exercises — 172

Index — 173
