Preface — V

Chapter 1

Challenges in nanoscience — 1

- 1.1 Nanoscience: basic questions — 1
 - 1.1.1 Technology has reached the level of science — 2
 - 1.1.2 The invention of the scanning tunneling microscope — 3
 - 1.1.3 Self-organizing processes — 3
 - 1.1.4 New phenomena require new theoretical developments — 4
- 1.2 Time — 4
 - 1.2.1 No quantum aspect of time! — 4
 - 1.2.2 Container model and projection principle: the main characteristics — 7
 - 1.2.3 Quantum aspect of time within the projection principle — 7
 - 1.2.4 Descriptions — 8
- 1.3 The basic features of nanoscience — 10
 - 1.3.1 What do we experience? — 11
 - 1.3.2 General remarks — 11
- 1.4 The levels of physical science — 12
 - 1.4.1 On the selection of theoretical views — 12
 - 1.4.2 Qualitative new effects at the nanolevel — 13
- 1.5 What is outside? — 14
 - 1.5.1 One-to-one correspondence — 14
 - 1.5.2 Impressions — 15
 - 1.5.3 Goggles with inverting glasses: an important experiment — 16
 - 1.5.4 The reality-picture unit — 18
- 1.6 The basics of space and time — 20
 - 1.6.1 The experiences in everyday life — 20
 - 1.6.2 Can space and time exist in isolated form? — 21
 - 1.6.3 The mind creates space and time! — 24
 - 1.6.4 The unconscious perception of space and time — 25
- 1.7 The system-specific time — 26
 - 1.7.1 The metaphysical aspect — 26
 - 1.7.2 The time spectrum — 27
 - 1.7.3 The standard system — 29
 - 1.7.4 Timescales — 29
 - 1.7.5 Observation through selection — 31
 - 1.7.6 Some characteristic features — 35
 - 1.7.7 Time spectra and selections — 36
 - 1.7.8 Space structure changes and observation features: overview — 37

1.7.9	Space–time feeling: elementary steps —	38
1.7.10	The time aspect in traditional physics —	39
1.8	Other types of biological individuals —	40
1.8.1	The chick experiment —	40
1.8.2	Assessment —	41
1.8.3	Chick experiment and projection effects —	42
1.8.4	The impact of nanoscience —	43
1.9	Immanuel Kant and his thoughts about space and time —	44
1.9.1	Kant’s arguments —	45
1.9.2	Differences to the projection principle —	45
1.9.3	Realists and antirealists —	46
1.9.4	The influence of evolution —	46
1.10	Summary and final remarks —	47
1.10.1	Outlook —	49

Chapter 2

Directions of nanoscience — 50

2.1	Basic physics and nanoscience —	50
2.1.1	Why computational and theoretical nanoscience? —	51
2.1.2	Complexity of nanosystems —	51
2.2	Some principal questions —	53
2.2.1	Nanobiological systems —	53
2.2.2	Levels of reality —	54
2.2.3	On the description of brain functions —	54
2.2.4	Living systems described mathematically —	56
2.3	Technological changes —	58
2.3.1	The trend to drastic technological changes —	58
2.3.2	Conclusion —	59
2.4	Brain functions and computational neurogenetics —	59
2.4.1	Nanomedicine —	59
2.4.2	Computational neurogenetics —	60
2.5	Theoretical and computational methods —	61
2.5.1	General remarks —	61
2.5.2	The most important techniques —	61
2.5.3	Simplifying assumptions —	65
2.5.4	Some critical remarks —	66
2.6	The atomistic standard model —	68
2.6.1	Solids and liquids —	68
2.6.2	Complex dynamical behavior —	68
2.7	The relevance of basic quantum theory for nanotechnology —	69
2.7.1	General remarks —	69
2.7.2	Traditional quantum theory: further remarks —	71

2.7.3	Basic new experiments — 72
2.7.4	Simultaneous detection of particle and wave aspects — 72
2.7.5	Conclusions — 73
2.8	Summary — 75

Chapter 3

Classical treatment of nanosystems — 77

3.1	Container model versus projection principle — 77
3.1.1	Container model — 78
3.1.2	Projection principle — 78
3.1.3	Fictitious realities — 80
3.1.4	The pragmatic view — 81
3.1.5	Molecular dynamics — 83
3.2	Atomic nanodesign — 83
3.2.1	What is the relevant input? — 83
3.2.2	The ultimate level — 86
3.2.3	Big data sets — 86
3.3	The physical formulation — 87
3.3.1	The Hamilton function — 87
3.3.2	Pair potential approximation — 88
3.3.3	Simple models — 89
3.4	The numerical treatment: molecular dynamics — 90
3.4.1	Basic information — 91
3.4.2	Total information — 92
3.4.3	Average values — 92
3.4.4	Density functions in phase space — 93
3.4.5	Individual and mean velocities — 96
3.4.6	Initial values — 98
3.5	Interaction potentials — 101
3.5.1	Types of interactions in condensed matter physics — 102
3.5.2	Remarks concerning phenomenological potentials — 104
3.5.3	Potential variations and their influence on system properties — 105
3.6	Structure and correlation functions — 108
3.6.1	General remarks — 108
3.6.2	Disordered systems — 110
3.6.3	Theoretical determination of the pair correlation function — 113
3.6.4	Nanosystems — 114
3.6.5	The dynamics of nanosystems — 116
3.6.6	The dynamical matrix — 116
3.6.7	The anharmonic case — 117
3.6.8	Time correlation functions — 117
3.6.9	Generalized phonon density of states — 119

3.6.10	On the modeling of the generalized phonon density of states —	121
3.7	Nanoengineering —	123
3.7.1	Complex nanomodels —	123
3.7.2	Nanoengineering and common mechanical engineering —	123
3.7.3	Constructions at various levels —	124
3.7.4	Nanomachines —	126
3.7.5	Wear at the nanolevel —	128
3.8	Summary and final remarks —	131
3.8.1	Classical descriptions —	131
3.8.2	Molecular dynamics —	132
3.8.3	The ultimate level —	132
3.8.4	Structure and dynamics at the nanolevel —	132

Chapter 4

Mind, brain, reality and nanoscience — 134

4.1	Relationships —	135
4.1.1	Three facts —	135
4.1.2	Analysis —	136
4.1.3	The conception —	137
4.1.4	Evolutionary processes —	138
4.1.5	Information transfer —	140
4.1.6	What is in the picture? —	142
4.1.7	Observer-dependent Worlds —	143
4.2	The barrier —	143
4.2.1	Only selected information is describable —	143
4.2.2	No one-to-one correspondence —	144
4.2.3	Conscious and unconscious actions —	145
4.3	Representation and observation —	145
4.3.1	Observation procedure —	145
4.3.2	Levels of observation —	146
4.3.3	Observations —	147
4.4	Interactions at the macroscopic level —	148
4.4.1	Analysis —	149
4.4.2	Illustration —	151
4.4.3	Brain and body functions —	154
4.4.4	The sight process within projection theory —	154
4.5	The atomic level and the atomic facet —	156
4.5.1	Measurements at the atomic level —	157
4.5.2	Composition of interactions —	158
4.5.3	Transition to the atomic level —	159
4.6	The sight process within projection theory —	160
4.6.1	Details concerning the interrelations —	160

- 4.6.2 Assessments of processes in the picture — 162
- 4.6.3 Nanophenomena from various points of views — 164
- 4.6.4 A general statement — 165
- 4.7 The atomic facet of physically real objects — 165
- 4.7.1 Ideas — 166
- 4.7.2 The evaluation — 166
- 4.7.3 The conscious and the unconscious creation of pictures of reality — 168
- 4.8 Mind–brain coupling: two directions — 168
- 4.8.1 Unconscious perceptions — 168
- 4.8.2 Conscious actions — 169
- 4.8.3 The essential transitions: summary — 171
- 4.8.4 Interaction types — 171
- 4.9 Changing the environment — 174
- 4.9.1 Brain and body — 175
- 4.9.2 Daily life — 175
- 4.9.3 Features of the processing characteristic η — 176
- 4.9.4 Features of the reality picture process — 176
- 4.9.5 Some general statements about the coupling — 177
- 4.9.6 The two poles: basic reality and picture — 181
- 4.9.7 Objective but observer dependent — 183
- 4.9.8 Feelings — 184
- 4.10 Summary and final remarks — 186

Chapter 5

Matter — 188

- 5.1 The black box — 188
- 5.1.1 Interactions and the five senses — 188
- 5.1.2 The observer's mind and the objects in basic reality — 189
- 5.1.3 Products of mind — 190
- 5.1.4 Laws — 191
- 5.1.5 Definition of a system — 191
- 5.1.6 Hidden reality — 192
- 5.1.7 Conclusion — 193
- 5.1.8 Theoretical developments — 193
- 5.1.9 The complete world — 195
- 5.1.10 The main items — 196
- 5.2 Classification — 196
- 5.2.1 Traditional view — 197
- 5.2.2 Projection principle — 197
- 5.3 Local interactions and block interactions — 198
- 5.3.1 Group formations — 199

5.3.2	What is pulled? — 199
5.3.3	Useful portions of all aspects — 200
5.3.4	Interaction types — 200
5.3.5	Stationary states — 202
5.3.6	Species-dependent world views — 203
5.4	Species-dependent features — 204
5.4.1	Interaction processes determine the evolutionary facts — 204
5.4.2	Compressed information — 205
5.4.3	Three facts — 206
5.4.4	Species-selected information — 206
5.4.5	Varying the species — 207
5.4.6	The situation for human beings — 209
5.5	Variants — 209
5.5.1	Various pictures of the same thing — 210
5.5.2	Local and global effects — 210
5.6	Nanoengineered brain functions — 212
5.6.1	No higher ordered point of view — 212
5.6.2	The ethical standpoint — 213
5.6.3	What is changed within nanotechnological alterations? — 214
5.7	The reality-picture principle — 217
5.7.1	Objective representations — 217
5.7.2	Ideas and conscious actions — 217
5.7.3	Observer's interaction and the space–time picture — 218
5.7.4	From basic reality to the picture of reality — 218
5.7.5	Instantaneous transitions — 219
5.7.6	Movements — 220
5.7.7	The indivisible observation procedure — 221
5.7.8	Space and time are not subjects of observation — 223
5.7.9	The relevance of everyday life experiences — 224
5.8	Are space and time given twice in nature? — 225
5.8.1	The features of space and time are the key — 225
5.8.2	Beyond the material level — 227
5.8.3	Where are the tools of evolution positioned? — 228
5.9	Preconditions for observations and descriptions — 229
5.9.1	Geometrical structures and the physically real effects — 230
5.9.2	Interactions with space and time? — 230
5.9.3	Relationships — 231
5.9.4	Facts outside space and time — 231
5.9.5	Traditional view — 232
5.9.6	What is outside? — 232
5.9.7	Mind-matter interrelations — 234

5.9.8	Raw information and its corresponding theoretical formulation — 234
5.10	Structures in space and time — 235
5.10.1	Static structures — 235
5.10.2	Representations — 235
5.10.3	An important point: no space–time in the world outside — 236
5.10.4	Interactions and correlations — 238
5.10.5	Only the information about the material objects is relevant — 238
5.10.6	Separability — 239
5.10.7	The main features — 240
5.11	Mechanisms for interaction processes — 241
5.11.1	Newton’s law — 241
5.11.2	Momentum and energy chunks — 244
5.11.3	Comparisons — 245
5.11.4	Observability and nonobservability — 246
5.12	Nanoscience and projection phenomena — 248
5.12.1	Outside of space and time — 249
5.12.2	Considerations with respect to nanoscience — 249
5.12.3	Further statements — 250
5.12.4	Intervention through evolution — 251
5.12.5	Raw space–time impressions — 251
5.12.6	Procedure — 252
5.13	Perception of object-specific properties — 253
5.13.1	Statistical events — 253
5.13.2	Projection theory points on a new type of time — 254
5.13.3	Complete and incomplete facts — 254
5.13.4	New variable for the time — 255
5.13.5	Existence and observation — 261
5.13.6	The Construction for Time-Individuals — 262
5.13.7	Constructions for Space-Individuals — 266
5.13.8	Conclusion — 271
5.13.9	Nanolevel and life functions — 272
5.13.10	Interrelations between the basic units — 273
5.13.11	Changing the brain functions at the nanolevel — 274
5.13.12	Space and time individuals — 274
5.13.13	Interchanging the roles of space and time — 276
5.14	Time: qualitative and quantitative formulations — 277
5.14.1	Principal statements — 278
5.14.2	Time-selection processes — 278
5.14.3	On the mathematical formulation — 280
5.15	Summary and final remarks — 280
5.15.1	Nanoscience: one theory for all phenomena — 281

- 5.15.2 The direct impressions — **282**
- 5.15.3 The notion “time” — **282**
- 5.15.4 Levels of description — **284**
- 5.15.5 The level of matter — **285**
- 5.15.6 Time: more details — **286**
- 5.15.7 What is the level of intervention? — **288**

Chapter 6

Fictitious realities — 290

- 6.1 Quantum states — **290**
 - 6.1.1 Other spaces — **290**
 - 6.1.2 The influence of Planck’s constant — **291**
 - 6.1.3 Reality and its picture — **292**
 - 6.1.4 What is energy? — **294**
 - 6.1.5 Existence of objects and processes between objects — **295**
 - 6.1.6 Conservation laws — **296**
 - 6.1.7 Counterparts — **297**
 - 6.1.8 Description of properties — **297**
 - 6.1.9 Instantaneous transition from reality to the picture — **300**
 - 6.1.10 Reality-picture connection — **302**
 - 6.1.11 Probabilities — **302**
 - 6.1.12 The interpretation of the wave functions — **303**
 - 6.1.13 Probability distributions — **304**
 - 6.1.14 Connections — **306**
 - 6.1.15 Detections — **308**
- 6.2 Dialogue with nature — **309**
 - 6.2.1 Caught in space and time — **310**
 - 6.2.2 The unconscious way — **310**
 - 6.2.3 The automatic execution of information — **311**
 - 6.2.4 The conscious way — **312**
 - 6.2.5 Fictitious realities and basic reality — **314**
- 6.3 Operators — **318**
 - 6.3.1 The variables are not always simple numbers — **318**
 - 6.3.2 The operator for the time coordinate — **319**
 - 6.3.3 Conclusion and summary — **320**
- 6.4 Operator equations — **321**
 - 6.4.1 Equivalencies — **322**
 - 6.4.2 Space-specific formulations — **323**
 - 6.4.3 Comparison with Schrödinger’s equation — **326**
- 6.5 Time operator — **326**
 - 6.5.1 Time in traditional quantum theory — **326**
 - 6.5.2 Uncertainties with respect to the variables — **327**

6.5.3	Time representation — 329
6.5.4	Alternative way — 331
6.5.5	Energy representation — 336
6.5.6	Discussion — 337
6.6	Classical behavior of the time — 339
6.6.1	System-specific time — 339
6.6.2	Classical time — 343
6.6.3	The two cases — 345
6.6.4	The transition from quantum states to classical behavior — 346
6.6.5	Quantum behavior of the reference time — 347
6.7	Classical behavior of space and time — 348
6.7.1	Statistical behavior in four dimensions — 348
6.7.2	Classical states — 350
6.7.3	Block behavior with respect to time and space distributions — 351
6.7.4	Block behavior in space and time — 353
6.7.5	Classifications — 356
6.8	Observational features — 360
6.8.1	Block behavior in four dimensions: Overview — 360
6.8.2	Objects and parts of the wave function — 361
6.8.3	The various steps — 362
6.8.4	Example — 366
6.8.5	General statements — 367
6.8.6	Nanosystems — 367
6.9	Selection of space structures — 367
6.9.1	The entire information — 368
6.9.2	Caught in space and time reference time and selection processes — 368
6.9.3	Introduction of the reference system — 369
6.9.4	Structure of reference time — 370
6.9.5	Selections — 372
6.9.6	Occupations — 375
6.9.7	Processing in the mind — 378
6.10	Self-organizing processes — 381
6.10.1	General definition — 381
6.10.2	Traditional physics — 382
6.10.3	Projection theory — 383
6.11	Summary and final remarks — 385

Chapter 7

Final statements — 388

7.1	Theory of relativity and quantum field theory — 389
7.1.1	Incompatible theories — 389

7.1.2	Compensation effects —	390
7.2	Uncertainties —	390
7.2.1	Remarks on the symmetry between space and time —	390
7.2.2	Uncertainty relations in traditional quantum theory —	392
7.2.3	Bunge's critique —	392
7.2.4	Consequences with respect to observations —	394
7.2.5	Two faces of the energy —	395
7.2.6	Some principal questions —	396
7.2.7	What situations in physics are container sensitive? —	398
7.2.8	A genuine uncertainty between energy and time —	398
7.3	No physically real space–time effects —	400
7.3.1	Container with material objects —	400
7.3.2	The situation within projection theory —	402
7.4	Summary and final remarks —	403
