Preface to the first edition — V

Preface to the second edition — VII

List of symbols — XIII

About the authors — XIX

1 Heat of detonation — 1

- 1.1 Basic knowledge of the heat of detonation — 1
 - 1.1.1 Measurement of the heat of explosion — 2
 - 1.1.2 Heat of detonation and heat of formation — 3
 - 1.1.3 Relationship between the heat of combustion and heat of formation — 5
- 1.2 The assumed detonation products — 6
 - 1.2.1 Simple methods for the prediction of the detonation products — 6
 - 1.2.2 Prediction of the detonation products on the basis of computer codes and using quantum mechanical calculations for the prediction of Q_{det} — 10
- 1.3 New empirical methods for the prediction of Q_{det} without considering the detonation products — 11
 - 1.3.1 Using the gas and condensed phase heats of formation of explosives — 11
 - 1.3.2 Using structural parameters of high explosives — 13
 - 1.3.3 Prediction of the heat of explosion in double-base and composite modified double-base propellants — 15
- 1.4 Calculation of the heat of detonation (explosion) temperature of ideal and non-ideal energetic compounds — 17
 - Summary — 20
 - Questions and problems — 20

2 Detonation temperature — 23

- 2.1 Adiabatic combustion (flame) temperature — 23
 - 2.1.1 Combustion of fuels with air — 23
 - 2.1.2 Combustion of propellants — 25
- 2.2 Detonation (explosion) temperature for explosives — 26
 - 2.2.1 Measurement of detonation temperature — 26
 - 2.2.2 Calculation of detonation temperature — 28
 - 2.2.3 Calculation of the detonation temperature of ideal and non-ideal energetic compounds — 33

Summary — 36

Questions and problems — 36

3 Detonation velocity — 37

- 3.1 Chapman–Jouguet (C–J) theory and detonation performance — **37**
- 3.2 Ideal and nonideal explosives — **38**
- 3.3 Measurement of the detonation velocity — **39**
- 3.4 Prediction of the detonation velocity of ideal explosives — **41**
 - 3.4.1 Detonation velocity as a function of the loading density, element composition, and the condensed phase heat of formation of pure and composite explosives — **42**
 - 3.4.2 Detonation velocity as a function of the loading density, element composition, and the gas phase heat of formation of the pure component — **44**
 - 3.4.3 Detonation velocity as a function of the loading density and molecular structures of high explosives — **44**
 - 3.4.4 Maximum attainable detonation velocity — **45**
 - 3.4.5 Comparison of empirical correlations with computer codes — **46**
- 3.5 Estimation of the detonation velocity of nonideal explosives — **49**
 - 3.5.1 Detonation velocity of ideal and nonideal explosives as a function of the loading density, element composition, and the condensed phase heat of formation of pure or composite explosives — **49**
 - 3.5.2 Using molecular structure to predict the detonation velocity of ideal and nonideal explosives — **51**
 - 3.5.3 Maximum attainable detonation velocity of $C_aH_bN_cO_dF_e$ and aluminized explosives — **52**
- 3.6 Assessment of the detonation velocity of primary explosives — **53**
 - Summary — **55**
 - Questions and problems — **57**

4 Detonation pressure — 59

- 4.1 Relationship between the detonation pressure and the detonation velocity — **59**
- 4.2 Measurement of the detonation pressure — **61**
- 4.3 Estimation of the detonation pressure of ideal explosives — **62**
 - 4.3.1 Detonation pressure as a function of the loading density, element composition, and the condensed phase heat of formation of pure or composite explosives — **62**
 - 4.3.2 Detonation pressure as a function of the loading density, element composition and gas phase heat of formation of the pure component — **64**

4.3.3	Detonation pressure as a function of the loading density and molecular structure of high explosives —	64
4.3.4	Maximum attainable detonation pressure —	65
4.4	Prediction of the detonation pressure of nonideal aluminized explosives —	65
4.4.1	Using the elemental composition for predicting the detonation pressure of explosives —	66
4.4.2	Detonation pressure of $C_aH_bN_cO_dF_eCl_f$ and aluminized explosives as a function of the loading density, element composition, and the condensed phase heat of formation of pure or composite explosives —	67
4.4.3	Using molecular structure for predicting the detonation pressure of ideal and aluminized explosives —	68
4.4.4	Maximum attainable detonation pressure of $C_aH_bN_cO_dF_e$ explosives and aluminized explosives —	69
4.5	Application of laser techniques for assessment of the detonation performance —	70
4.5.1	The laser-induced air shock from energetic materials (LASEM) method —	71
4.5.2	Application of LASEM for composite energetic materials with metal additives —	72
4.5.3	Laser Induced Breakdown Spectroscopy (LIBS) —	74
4.6	Calculating the detonation pressure of ideal and non-ideal explosives containing Al and AN —	79
	Summary —	80
4.7	Questions and problems —	80
5	Gurney energy —	83
5.1	Gurney energy and Gurney velocity —	84
5.2	Gurney energy and the cylinder expansion test —	85
5.2.1	Cylinder test measurements —	85
5.2.2	Prediction methods of the cylinder test —	86
5.2.3	JWL equation of state —	88
5.3	Different methods for the prediction of the Gurney velocity —	88
5.3.1	Using the Kamlet–Jacobs decomposition products —	89
5.3.2	The use of elemental composition and the heat of formation —	89
5.3.3	The use of elemental composition without using the heat of formation of an explosive —	90
5.4	Combined effects aluminized explosives —	91
5.5	Assessment of the Gurney velocity of aluminized and nonaluminized explosives —	92
5.5.1	Using the BKW thermochemical code —	92

5.5.2	Detonation pressure and the specific impulse —	93
5.5.3	The Gurney velocity based on the heat of combustion —	94
	Summary —	95
	Questions and problems —	96
6	Power (strength) —	97
6.1	Different methods for measuring the power and brisance of an explosive —	97
6.2	Different methods for the prediction of power —	100
6.2.1	A simple correlation for the prediction of the volume of explosion gases of energetic compounds —	101
6.2.2	Power index —	101
6.2.3	Simple correlations for the prediction of power on the basis of the Trauzl lead block and the ballistic mortar tests —	102
6.3	Prediction of brisance —	106
6.3.1	Sand crushing test —	107
6.3.2	Plate dent test —	108
	Summary —	111
	Questions and problems —	112
7	Underwater detonation (explosion) —	113
7.1	Measurement of shock wave energy and bubble energy —	113
7.2	Assessment of the performance in the underwater explosion —	116
	Summary —	118
	Questions and problems —	118
	Answers to questions and problems —	119
	Chapter 1 —	119
	Chapter 2 —	119
	Chapter 3 —	120
	Chapter 4 —	120
	Chapter 5 —	120
	Chapter 6 —	120
	Chapter 7 —	121
	Appendix: Glossary of compound names and heats of formation for pure and composite explosives —	121
	Bibliography —	131
	Index —	143
