Preface — VII

1	Definition — 1
1.1	Partial differential equations — 1
1.2	Linear PDEs — 4
1.3	Separable ODEs: a brief remainder — 10
1.4	PDEs reducible to ODEs — 16
2	Change of variables in PDEs — 29
2.1	Change of variables in a PDE: “direct” approach — 29
2.2	Inverse function theorem — 39
2.3	Change of variables in a PDE: “indirect” approach — 41
3	First-order linear equations — 49
4	First-order semilinear equations — 63
4.1	Peano–Pickard–Lindelöf theorem — 63
4.2	Method of characteristics for semilinear equations — 67
5	First-order quasilinear equations: vector fields — 85
5.1	Peano–Pickard–Lindelöf theorem for higher dimensions — 86
5.2	Vector fields and their characteristic curves — 89
5.3	First integrals of vector fields — 100
6	First-order quasilinear equations: solution sets — 117
6.1	Solutions determined by first integrals — 117
6.2	Main theorem on solution sets — 124
6.3	Cauchy problem for a PDE — 129
6.4	First integrals: up to the task once again — 130
7	Method of characteristics for first-order quasilinear equations — 157
7.1	Surfaces made up of characteristic curves — 157
7.2	Main theorem — 170
8	Second-order semilinear equations — 205
8.1	Three main types — 205
8.2	Hyperbolic equations — 214
8.3	Parabolic equations — 223
8.4	Elliptic equations — 231

X — Contents

A Appendix — 249

A.1 Inverse function theorem — **249**

A.2 Functional dependence — **256**

Bibliography — 263

Index — 265
