Preface — XI

1 Complex numbers — 1

- 1.1 The field of the complex numbers — 1
- 1.2 The complex plane — 3
- 1.3 The topological and metric structure of the complex plane — 6
 - 1.3.1 Basic definitions and notation — 6
- 1.4 Complex function, limits, continuity — 9
- 1.5 The compactified complex plane — 10
 - 1.5.1 The geometric interpretation of the φ function — 12
 - 1.5.2 The topological structure of $\widehat{\mathbb{C}}$ — 12
- 1.6 Exercises — 14

2 Holomorphic functions — 17

- 2.1 The derivative of the real valued complex functions — 17
- 2.2 The differentiability of a complex function — 19
- 2.3 The derivative of a complex function — 23
 - 2.3.1 The properties of the derivative — 25
- 2.4 The geometric interpretation of the derivative — 29
- 2.5 Entire functions — 33
 - 2.5.1 The polynomial function — 33
 - 2.5.2 The exponential function — 33
 - 2.5.3 Complex trigonometric functions — 34
 - 2.5.4 Complex hyperbolic functions — 35
- 2.6 Bilinear transforms — 35
 - 2.6.1 Decompositions in elementary functions — 36
- 2.7 The Möbius-type groups — 39
- 2.8 Multivalued functions — 43
 - 2.8.1 The logarithmic function — 43
 - 2.8.2 Inverse trigonometric functions — 45
 - 2.8.3 The power function — 46
- 2.9 Exercises — 47
 - 2.9.1 Real variable complex functions — 47
 - 2.9.2 The derivative of a complex function — 47
 - 2.9.3 Entire functions — 49
 - 2.9.4 Bilinear transforms — 49

3 The complex integration — 51

3.1	The homotopic theory of the paths — 51
3.1.1	Simply connected domains — 55
3.1.2	Functions of bounded variation and paths — 58
3.2	The complex integral — 60
3.2.1	The Riemann–Stieltjes integral for complex valued functions — 60
3.3	The Cauchy theorem — 66
3.3.1	The connection between the integral and the primitive function — 66
3.3.2	The Cauchy theorem — 74
3.4	The Cauchy formula for the disc — 79
3.5	The analytical branches of multivalued functions — 82
3.6	The index of a path (curve) with respect to a point — 84
3.7	Cauchy formula for closed curves — 87
3.8	Some consequences of Cauchy formula — 88
3.9	Schwarz and Poisson formulas — 91
3.10	Exercises — 94
3.10.1	The complex integral — 94
3.10.2	The Cauchy theorem — 96
3.10.3	The Cauchy formula for the disc — 97
3.10.4	Some consequences of Cauchy formula — 101
3.10.5	Multivalued functions analytical branches — 102
4	Sequences and series of holomorphic functions — 105
4.1	Sequences of holomorphic functions — 105
4.2	Series of functions — 107
4.3	Power series — 108
4.4	The analyticity of holomorphic functions — 111
4.5	The zeros of holomorphic functions — 114
4.6	The maximum principle of the holomorphic functions — 117
4.7	Laurent series — 122
4.8	Isolated singular points — 127
4.9	Meromorphic functions — 131
4.10	Exercises — 134
4.10.1	Power series — 134
4.10.2	Taylor and Laurent series — 135
4.10.3	Isolated singular points — 138
4.10.4	The module maximum of the holomorphic functions — 139
5	Residue theory — 141
5.1	Residue theorem — 141
5.2	Applications of the residue theorem to the calculation of the integrals — 144
5.3	The study of meromorphic functions with the residue theorem — 158

5.4	Exercises — 165
5.4.1	Residue theorem — 165
5.4.2	Applications of the residue theorem to the calculation of the trigonometric integrals — 168
5.4.3	Applications of the residue theorem to the calculation of the improper integrals — 169
5.4.4	The study of meromorphic functions using the residue theorem — 169
6	Conformal representations — 171
6.1	Special classes of holomorphic functions — 171
6.2	Univalent functions — 175
6.3	The problem of conformal representation — 179
6.4	The Riemann mapping theorem — 181
6.5	Exercises — 187
7	Solutions to the chapterwise exercises — 191
7.1	Solutions to the exercises of Chapter 1 — 191
7.2	Solutions to the exercises of Chapter 2 — 199
7.3	Solutions to the exercises of Chapter 3 — 218
7.4	Solutions to the exercises of Chapter 4 — 277
7.5	Solutions to the exercises of Chapter 5 — 322
7.6	Solutions to the exercises of Chapter 6 — 380

Bibliography — 405

Index — 407
