

Contents

1	Basic Notions About Models of Computation	
1.1	Introduction	6
1.2	Alphabets, Words, Sets, and Classes	6
1.3	Inclusion Modulo Finite Variants	13
1.4	Boolean Formulas	15
1.5	Models of Computation: Finite Automata	20
1.6	Models of Computation: Turing Machines	21
1.7	Models of Computation: Nondeterministic Turing Machines	28
1.8	Models of Computation: Oracle Turing Machines	30
1.9	Bibliographical Remarks	35
2	Time and Space Bounded Computations	
2.1	Introduction	36
2.2	Orders of Magnitude	36
2.3	Running Time and Work Space of Turing Machines	39
2.4	Time and Space Constructibility	44
2.5	Bounding Resources: Basic Definitions and Relationships	49
2.6	Bibliographical Remarks	57
3	Central Complexity Classes	
3.1	Introduction	59
3.2	Definitions, Properties, and Examples	59
3.3	Computing Functions: Invertibility and Honesty	63
3.4	Polynomial Time Many-one Reducibility	67
3.5	“Natural” <i>NP</i> -complete Sets	71
3.6	“Natural” <i>PSPACE</i> -complete Sets	74
3.7	Padding Arguments	77
3.8	Space Bounded Reducibility	79
3.9	Exercises	83
3.10	Bibliographical Remarks	84

4 Time Bounded Turing Reducibilities

4.1	Introduction	87
4.2	Polynomial Time Turing Reducibility: Relativized Classes . .	87
4.3	Tally and Sparse Sets in NP	93
4.4	Strong Nondeterministic Polynomial Time Reducibility	96
4.5	Self-Reducibility	98
4.6	Exercises	99
4.7	Bibliographical Remarks	102

5 Nonuniform Complexity

5.1	Introduction	104
5.2	Classes Defined by Advice Functions	104
5.3	Boolean Circuit Complexity	105
5.4	Turing Machines and Boolean Circuits	110
5.5	Polynomial Advice	115
5.6	Logarithmic Advice	120
5.7	Self-Producing Circuits	123
5.8	A Lower Bound to the Circuit Size of Boolean Functions . . .	126
5.9	Other Nonuniform Complexity Measures	128
5.10	Exercises	131
5.11	Bibliographical Remarks	133

6 Probabilistic Algorithms

6.1	Introduction	136
6.2	The Probabilistic Computational Model	137
6.3	Polynomial Time Probabilistic Classes	140
6.4	Bounded Error Probability	144
6.5	Nonuniform Properties of BPP	149
6.6	Zero Error Probability	151
6.7	Exercises	153
6.8	Bibliographical Remarks	155

7 Uniform Diagonalization

7.1	Introduction	157
7.2	Presentability and Other Properties	157
7.3	The Main Theorem	158
7.4	Applications	160
7.5	Exercises	165
7.6	Bibliographical Remarks	166

8 The Polynomial Time Hierarchy	
8.1 Introduction	168
8.2 Definition and Properties	168
8.3 Characterization and Consequences	171
8.4 Complete Sets and Presentability	177
8.5 <i>BPP</i> and the Polynomial Time Hierarchy	178
8.6 Exercises	182
8.7 Bibliographical Remarks	183
References	186
Appendix	
Complementation via Inductive Counting	194
