Foreword by Michael R. Trimble, FRCP, FRCPsych	ix
Part I: Functional Neuroimaging with Radioactive Tracers	1
1 Principles of Emission Tomography	3
2 Radiopharmaceutical Ligands and Tracers.	11
3 SPET Instrumentation: Characteristics and New Developments	29
4 Clinical Use of SPET Imaging in Psychiatric and Neurological Disease	51
Part II: Neuroactivation with SPET	121
5 A Historical and Philosophical Review of Localizing Brain Function.	123
6 Models of Brain Processing with Respect to Functional Neuroimaging	133
7 Description and Principles of Neuroactivation.	143
8 Review of Previous SPET Neuroactivation Studies in Normal Controls	153
9 Activation Protocols in Normal Subjects Using SPET: A Window into Normal Brain Function	157
10 Activation Studies in Specific Disease States: Future Applications	173
Appendixes:	
I Area-Specific Activation Tasks	183
II A Guide to Performing Neuroactivation Studies.	184
Selected Bibliography	185
Subject Index.	193
