

Part I Introductions 3

1	Pattern Recognition	5
1.1	Images and Sound	5
1.2	Applications of Pattern Recognition	6
1.3	Environment, Problem Domain, and Patterns	7
1.4	Characterization of Pattern Recognition	8
1.5	Recording of Speech Signals	9
1.6	Video Cameras and Projections	10
1.7	From Continuous to Digital Signals	13
1.8	Sampling Theorem in Practice	16
1.9	Visualization and Sound Generation	16
2	From C to C++	18
2.1	Syntax Notation	18
2.2	Principle of C++ Compilation	19
2.3	Function Calls and Arguments	21
2.4	Declaration and Definition of Variables	22
2.5	Unix-File Access via Standard Functions	24
2.6	Formatted Input and Output	25
2.7	Main Program	26
2.8	Preprocessor Directives	27
2.9	Conditional Compilation	28
3	Software Development	32
3.1	Software for Pattern Recognition	32
3.2	Principles of Software Development	33
3.3	Modular and Structured Programming	34
3.4	Comments and Program Layout	35
3.5	Documentation	36
3.6	Teamwork	37
3.7	Efficiency	38
3.8	Tools for Software Development with Unix	39
3.9	PUMA	39
4	Expressions, Statements, Functions	42
4.1	Instructions and Expressions	42
4.2	Logical Values and Conditionals	44
4.3	Function Definition	46
4.4	Loops	48
4.5	Declarations and Scope	50
4.6	Switches	52
4.7	Linkage	53
4.8	Programming with Modules	54
4.9	Control Structures	56

5	Classification and Pattern Analysis	58
5.1	Classification	58
5.2	Preprocessing	60
5.3	Feature Extraction	60
5.4	Analysis	61
5.5	Image Segmentation	62
5.6	Speech Segmentation	64
5.7	Pattern Understanding	65
5.8	Active Vision and Real Time Processing	67
5.9	Top-Level Loop for Speech Analysis	68
6	Arrays and Pointers	70
6.1	Vectors and Matrices	70
6.2	Pointers	72
6.3	Vectors vs. Pointers	74
6.4	Vector Initialization	74
6.5	Strings	75
6.6	Pointers Operations and Allocation	76
6.7	Pointer and Array Arguments	78
6.8	Pointer to Pointer	79
6.9	Main Function Arguments	80
7	Statistics for Pattern Recognition	83
7.1	Axioms	83
7.2	Discrete Random Variables	84
7.3	Continuous Random Variables	86
7.4	Mean and Variance	87
7.5	Moments of a Distribution	88
7.6	Random Vectors	89
7.7	Statistical Features and Entropy	90
7.8	Signal-to-Noise Ratio	91
7.9	Histograms	92
8	C++ as a better C	95
8.1	Type Declaration	95
8.2	Type Conversion for Pointers	96
8.3	Bit- and Shift-Operations	97
8.4	Type Specifiers and Variable Declaration	98
8.5	Type-Safe Linkage	100
8.6	Overloaded Function Names	101
8.7	Return Value and Arguments	102
8.8	Macros and Inline Functions	103
8.9	Function Pointers	104

Part II Object-Oriented Pattern Analysis 109

9	Object-Oriented Programming	111
9.1	Object-Oriented Software Techniques	111
9.2	Basic Concepts	113
9.3	Data Abstraction and Modules	114
9.4	Inheritance	115
9.5	Abstract Classes	116
9.6	Object-Oriented Classification	118
9.7	Polymorphism	119
9.8	Other Object-Oriented Concepts	119
9.9	Class Libraries	120
10	Classes in C++	122
10.1	Structures	122
10.2	Methods and ADT's	123
10.3	Class Declarations	126
10.4	Object Construction	127
10.5	Destruction of Objects	129
10.6	Overloaded Operators	131
10.7	Advanced Methods and Constructors	132
10.8	Vector Class	134
10.9	Class Design	137
11	Intensity Images	139
11.1	Array Class	139
11.2	Templates in C++	142
11.3	Images	144
11.4	External Data Formats	146
11.5	Binary Images	147
11.6	Color Images	148
11.7	Sub Images	150
11.8	Image Transformation and Registration	152
11.9	Neighborhood	153
12	Inheritance in C++-Classes	155
12.1	Motivation and Syntax	155
12.2	Base Class Access	156
12.3	Construction and Destruction	158
12.4	Pointer to Objects	160
12.5	Virtual Functions	162
12.6	Abstract Classes	163
12.7	Image Class Hierarchy	164
12.8	Multiple Inheritance	165
12.9	Implementation Issues	167

13 Edge Detection and Edge Images	169
13.1 Motivation	169
13.2 Strategies	169
13.3 Discrete Derivative of the Intensity	171
13.4 Sobel and Prewitt Operator	174
13.5 Bit Fields in C++	175
13.6 Unions in C++	176
13.7 Edge Class	177
13.8 Edge Images	178
13.9 Color Edge Operators	179
14 Class Libraries	182
14.1 Stream Input and Output	182
14.2 NIH Class Library	184
14.3 Dynamic Class Descriptions	186
14.4 Static Class Members	186
14.5 Input and Output for Objects	189
14.6 Strings	190
14.7 Container Classes	191
14.8 Time and Date	193
14.9 More Classes	194
15 Hierarchy of Picture Processing Objects	196
15.1 General Structure	196
15.2 Hippos Object	197
15.3 Images and Matrices	199
15.4 Chain Code Class	201
15.5 Enumerations and Scope Resolution	202
15.6 Polygonal Representation	206
15.7 Atomic Objects	208
15.8 Segmentation Objects	210
15.9 External Representation	211
16 Spectral Features and Speech Processing	214
16.1 Fourier Series and Fourier Transform	214
16.2 Discrete Fourier Transform	219
16.3 Fast Fourier Transform	220
16.4 2D Fourier Transform	221
16.5 Short time Fourier analysis	222
16.6 Linear Predictive Coding	223
16.7 Dynamic Time Warping	226
16.8 Hidden Markov Models	229
16.9 Different Types of Hidden Markov Modells	234

Part III Pattern Recognition Algorithms 237

17 An Image Analysis System	239
17.1 Data Flow	239
17.2 Design of ANIMALS	240
17.3 XDR	242
17.4 Display and Capture	243
17.5 Graphical User Interfaces	244
17.6 Geometric Distortions	244
17.7 Polymorphic image processing	245
17.8 Efficiency	248
17.9 Image Segmentation Program	248
18 Synthetic Signals and Images	253
18.1 Synthetic Sound	253
18.2 Geometric Patterns	254
18.3 Pixel Noise	254
18.4 Gaussian Noise	255
18.5 Salt-and-Pepper Noise	256
18.6 Different Views of a 3D Polyhedral Object	257
18.7 Digits and Letters	258
18.8 Single Stereo Images	258
18.9 Spectrogram	260
19 Filtering and Smoothing Signals	263
19.1 Mean-Filter and Gaussian-Filter	264
19.2 Median-Filter	265
19.3 Smoothed Median-Filter	266
19.4 Edge Preserving Smoothing	267
19.5 K -Nearest Neighbor Averaging	267
19.6 Conditional Average Filter	269
19.7 Linear Reconstruction	269
19.8 Elimination of Noisy Image Rows	271
19.9 Resolution Hierarchies	272
20 Histogram Algorithms	278
20.1 Discriminant and Least Squares Threshold	278
20.2 Histogram Entropy Thresholding	280
20.3 Multithresholding	282
20.4 Local Histogram Equalization	282
20.5 Lookup Table Transformation	283
20.6 A Class for Histograms	285
21 Edge Images	287
21.1 Robert's Cross	287

21.2	Second Derivative	287
21.3	Edge Model Masks	289
21.4	Alternative Methods	291
21.5	Thinning of Edge Images	292
21.6	Edge Thresholding	293
21.7	Non Maxima Suppression	294
21.8	Non Maxima Absorption	296
21.9	Class Edge Revisited	297
22	Line Detection Algorithms	300
22.1	Line Detection	300
22.2	Local Connectivity	301
22.3	Hysteresis Thresholds	302
22.4	Closing of Gaps	305
22.5	Zero crossings in Laplace-Images	306
22.6	Hough Transform	306
22.7	Canny Line Detection	310
22.8	Shen and Castan	311
22.9	Representation as Segmentation Objects	311
23	Chain Codes	315
23.1	Length of a Chain	315
23.2	Smoothing	315
23.3	Digital Linear Lines	317
23.4	Similarity	317
23.5	Intersections	318
23.6	Rotation	318
23.7	Conversion	319

Part IV	Appendix	321
A	Basics of C++	323
A.1	History	323
A.2	Identifier and Constants	324
A.3	Basis Data Types in C and C++	325
B	Software Development Tools	326
B.1	Groups and ID's with Unix	326
B.2	Program Building with make	327
B.3	The Use of Libraries	329
B.4	Version and Access Control with rcs	329
C	Source Codes and Tools	332
C.1	List of Tools	332
C.2	How to get the sources	332
C.3	X11	333
C.4	Slides	333
C.5	Addresses	333
C.6	Headers and Source Files	334
C.7	Dummy Definitions	334
C.7.1	Listing of animals/dummy/Dictionary.h	335
C.7.2	Listing of animals/dummy/OIOxdr.h	335
C.7.3	Listing of animals/dummy/Represent.h	335
C.7.4	Listing of animals/dummy/SeqCltn.h	335
C.7.5	Listing of animals/dummy/Set.h	336
C.7.6	Listing of animals/dummy/dummies.C	336
	References	338
	Index	344
	Figures	352
	Tables	356
	Index for Exercises	357
