List of symbols xii

Preface xv

Introduction xvii

1. Systems of matter

1.1 Atoms 1.2

 Structure of the atom 1.2

 Elements 1.2

 Isotopes 1.3

1.2 Relative atomic mass 1.3

1.3 Relative molecular mass 1.4

1.4 Amount of substance - the mole 1.5

 The Avogadro constant 1.5

1.5 Molar mass 1.6

1.6 Mixture of substances 1.7

 Concentration 1.7

1.7 The ideal gas law 1.8

1.8 Ideal gas mixture 1.9

 Atmospheric air 1.9

 Humidity 1.9

1.9 Real gases 1.10

 The van der Waals equation 1.11

 The van der Waals constants 1.11

1.10 Intermolecular forces 1.12

 The Lennard-Jones potential 1.12

 The Lennard-Jones parameters 1.13

 Hydrogen bond 1.13

1.11 Critical temperature 1.14

 The van der Waals isotherms 1.14

 The critical point 1.15

 Critical constants 1.16

1.12 SI units 1.17

 Base units 1.17

 Derived units 1.17

 Prefixes 1.17

 Special units 1.18

List of key ideas 1.19

Examples 1.20

 1.1: Corrosion of iron – stray current 1.20

 1.2: Air hardening of lime mortar 1.21

 1.3: Foaming of aerated concrete 1.22

 1.4: Accelerated testing of concrete 1.23

1.5: Molar mass of atmospheric air	1.24
1.6: Chemical shrinkage by hardening of Portland cement	1.25
Exercises	1.27
Literature	1.30

2. Thermodynamic concepts

2.1 Thermodynamic system	2.2
System types	2.2
2.2 Description of state	2.3
2.3 Thermodynamic variables	2.4
2.4 Temperature	2.6
Thermodynamic temperature scale	2.6
Other temperature units	2.6
2.5 Work	2.7
Work and heat	2.7
The concept of work	2.8
Mechanical work	2.8
Volume work	2.9
Surface work	2.10
Electrical work	2.10
2.6 Heat	2.11
Heat capacity of a system	2.12
Specific heat capacity	2.12
Heating of a system of substances	2.13
Symbols and units	2.13
2.7 Thermodynamic process	2.14
Process conditions	2.15
Process types	2.15
List of key ideas	2.16
Examples	2.18
2.1: Measuring the adiabatic heat development of concrete	2.18
2.2: Mechanical work in tensile testing of a steel rod	2.19
2.3: Volume work by evaporation of water	2.20
2.4: Surface work by atomization of water	2.21
2.5: Electrical work by galvanizing of steel	2.22
2.6: Heating of mortar by employing hot mixing water	2.24
Exercises	2.24
Literature	2.28

3. First law

3.1 Energy	3.2
Energy and energy conservation	3.2
Energy forms	3.2
Kinetic energy	3.2
Potential energy	3.3
Chemical energy	3.3
Summary	3.3
3.2 First law	3.4
Internal energy as a state function	3.5

3.3 Internal energy U	3.6
Symbols and units	3.7
Internal energy and heat capacity	3.7
3.4 Enthalpy H	3.8
Enthalpy H as a state function	3.8
Symbols and units	3.9
Enthalpy and heat capacity	3.9
3.5 Ideal gas	3.10
Joule's law	3.11
3.6 Isothermal change of state	3.12
3.7 Adiabatic change of state	3.13
Adiabatic equations	3.14
Course of adiabats	3.15
3.8 Thermochemical equation	3.16
Reaction enthalpy	3.16
Reaction equations	3.16
Reaction heat	3.17
Thermochemical calculation	3.17
Calculation rules	3.18
3.9 Standard enthalpy	3.19
Pressure-dependence of enthalpy	3.20
Temperature-dependence of enthalpy	3.20
3.10 Reaction enthalpy	3.21
Calculation procedure	3.22
List of key ideas	3.23
Examples	3.24
3.1: Temperature rise in hardening plaster of Paris	3.24
3.2: Computerized calculation of the evaporation heat of water	3.26
3.3: Heat development and hydration of clinker minerals	3.27
3.4: Fire resistance of plaster	3.28
3.5: Measurement of hydration heat with a solution calorimeter	3.30
3.6: Computerized enthalpy calculation	3.32
Exercises	3.33
Literature	3.38

4. Second law

4.1 Introduction	4.2
Spontaneous processes	4.2
Thermodynamic equilibrium	4.2
Thermodynamic process	4.3
4.2 The Carnot cycle	4.4
Thermal efficiency	4.4
The Carnot cycle	4.5
4.3 Second law	4.7
Entropy S	4.7
4.4 Temperature dependence of entropy	4.9
4.5 Entropy change, ideal gas	4.10
4.6 Entropy change by phase transformation	4.12
4.7 Standard entropy	4.13
4.8 Reaction entropi	4.15

Calculation procedure	4.16
4.9 Chemical equilibrium	4.17
The constant growth of entropy	4.17
Thermodynamic equilibrium condition	4.18
4.10 The concept of entropy	4.19
Micro states	4.19
The probable disorder	4.20
The Boltzmann relation	4.20
Can entropy decrease?	4.21
Phase transformation and disorder	4.21
List of key ideas	4.22
Examples	4.24
4.1: Transformation of tin at a low temperature – "tin pest"	4.24
4.2: Dehydration of gypsum when grinding Portland cement	4.26
4.3: Computerized calculation of the partial pressure of sat. water vap.	4.27
4.4: Differential thermal analysis of cement paste – DTA	4.29
4.5: Vapour pressure of mercury – occupational exposure limit	4.31
4.6: Control of relative humidity RH by salt hydrates	4.32
Exercises	4.34
Literature	4.37

5. Calculations of equilibrium

5.1 The Gibbs free energy	5.2
Definition of free energy G	5.2
The G function differential	5.2
Spontaneous processes	5.3
Free reaction energy	5.4
5.2 The Clapeyron equation	5.5
Phase equilibrium in single-component system	5.6
Integration of the Clapeyron equation	5.6
5.3 The Clausius-Clapeyron equation	5.7
Integration of the Clausius-Clapeyron equation	5.8
5.4 Activity	5.9
5.5 Thermodynamic equilibrium constant	5.12
Equilibrium condition	5.13
Determination of activity	5.13
5.6 Temperature dependence of equilibrium	5.14
List of key ideas	5.16
Examples	5.17
5.1: Loss of strength by high-temperature curing of concrete	5.18
5.2: Steel manufacture – reduction of iron ore in blast furnace	5.19
5.3: Capillary condensation in porous construction materials	5.21
5.4: Computerized calculation of the partial pressure of sat. water vap.	5.23
5.5: Adsorption of water in hardened cement paste	5.25
5.6: Precipitation of salt in porous materials – salt damages	5.28
Exercises	5.31
Literature	5.35

6. Electrochemistry

6.1 Electric current and charge	6.2
Electric current	6.2
Electric charge	6.3
The Faraday constant	6.3
6.2 Electric potential	6.4
Field strength	6.4
Electric potential	6.4
Electric work	6.5
6.3 Electric conductivity	6.6
Conductivity	6.6
Conductance	6.7
6.4 Electrochemical reaction	6.8
Electrochemical cell	6.8
Redox reaction	6.9
Electrochemical process	6.9
6.5 Electrochemical potential	6.11
The electrochemical potential	6.11
Daniell cell	6.12
6.6 The Nernst equation	6.13
Electric work contribution	6.13
The Nernst equation	6.13
6.7 Temperature dependence of the potential	6.15
6.8 Notation rules	6.16
Cell diagram	6.16
Cell reaction	6.17
6.9 Standard potential	6.19
Standard hydrogen electrode	6.19
Potential of single electrode	6.19
6.10 Passivation	6.21
Anode reaction with passivation	6.21
Reinforcement corrosion	6.22
List of key ideas	6.23
Examples	6.25
6.1: Oxidation of metals in water – pH dependence	6.25
6.2: Calculating and producing a Pourbaix diagram for iron Fe	6.27
6.3: Measurement of pH with glass electrode – membrane potential	6.29
6.4: Electrochemical measurement of thermodynamic standard values	6.30
6.5: Hydrogen reduction with polarization – hydrogen brittleness	6.32
Exercises	6.34
Literature	6.38

APPENDIX A

Mathematical appendix

1. Numerical calculations	A.2
Input data	A.2
Specification of uncertainty	A.2
Significant digits	A.2
Mathematical uncertainty calculation	A.3

Approximate uncertainty calculation	A.4
Example:	
Thermodynamic calculation of the ion product and pH of water	A.6
Literature	A.8
2. Dimensional analysis	A.8
Fields of application	A.8
Limitations	A.8
Physical dimension	A.9
Types of dimension	A.9
Dimensional-homogeneous equation	A.10
The Buckingham pi theorem	A.10
Determination of pi parameters	A.11
Rewriting of pi parameters	A.12
Synthetic base units	A.13
Calculation examples	A.14
Examples:	
Non-steady convective cooling of concrete cross-sections	A.14
Capillary cohesion in particle systems	A.17
Literature	A.19
3. Newton-Raphson iteration	A.19
Example:	
Calculation of amount of substance, the van der Waals equation	A.20
Literature	A.20
4. Cramer's formula	A.20
Example:	
Solution of linear equation system	A.22
Literature	A.22
5. Linear regression	A.22
Example:	
Influence of the force-fibre angle on the compressive strength of wood	A.24
Literature	A.25
6. Exact differential	A.26
Example:	
Change of state, ideal gas	A.27
Literature	A.28
7. Gradient field	A.28
Example:	
Calculation of gradient and curve integral	A.30
Literature	A.30
8. Maxwell's relations	A.31
State quantities	A.31
Fundamental equations	A.31
Maxwell's relations	A.32
Substance parameters	A.33
Examples:	
Joule's law for ideal gas	A.34
Influence of pressure on the entropy of condensed substances	A.35
Temperature change for adiabatic compression of substances	A.35
Pressure increase in case of heating with delayed expansion	A.36
Literature	A.37
9. Debye-Hückel's law	A.37
Ions in solutions	A.37
Activity coefficient	A.38

Debye-Hückel's law	A.38
Example:	
Ion strength and activity coefficient in saline solution	A.39
Literature	A.39

APPENDIX B

Tables

Physical constants	B.2
Elements	B.2
Van der Waals constants	B.5
Thermochemical data (1) (inorganic compounds)	B.6
Thermochemical data (2) (cement-chemical compounds)	B.18
Thermochemical data (3) (organic compounds)	B.21
Molar heat capacity	B.22
Surface tension	B.25
Electrochemical standard potential	B.26
Water and water vapour	B.26

APPENDIX C

Solutions to check-up questions and exercises

Solutions to check-up questions and exercises	C.2
1. Systems of matter	C.2
2. Thermodynamic concepts	C.3
3. First law	C.5
4. Second law	C.6
5. Calculations of equilibrium	C.8
6. Electrochemistry	C.9

APPENDIX D

Subject index

Subject index	D.1
